SUBJECT: Allen Creek Drainage District
Miller Road Green Corridor
SRF No. 5436-01

A portion of the Miller Road Green Corridor project qualifies as a Categorical Green project under the Green Project Reserve. The green project components include 25 rain gardens within the road right-of-ways on Miller Road, a 7,900 square foot bioinfiltration area in Garden Homes Park, and a 6,460 square foot bioinfiltration area in Miller Nature Area. These green infrastructure practices will facilitate the infiltration of stormwater.

Allen Creek Drainage District is only financing the stormwater BMP portion of the Miller Road reconstruction. The total as-bid amount of the stormwater BMPs is $765,033. Of that amount, $291,708 is for the installation of green infrastructure practices. Therefore, the green infrastructure portion is 38.13% of the stormwater BMP cost. The loan amount for the Miller Road Green Corridor project is $1,000,000. The total green project amount is $381,300.
