Michigan Service Line Materials Estimates
Preliminary Distribution System Materials Inventories

Michigan's drinking water regulations now require public water supplies to maintain an inventory of service line materials in their distribution systems. By January 1, 2020, public water supplies were required to submit a Preliminary Distribution System Materials Inventory (PDSMI) to the Michigan Department of Environment, Great Lakes, and Energy (EGLE). The primary focus of the PDSMI was for water supplies to review their existing records and report what is known and unknown regarding service line materials. This provides important information for planning service line material verification and replacement efforts.

Service Line Materials Categories: Water supplies were required to summarize potable water service connections by broad material categories as follows:

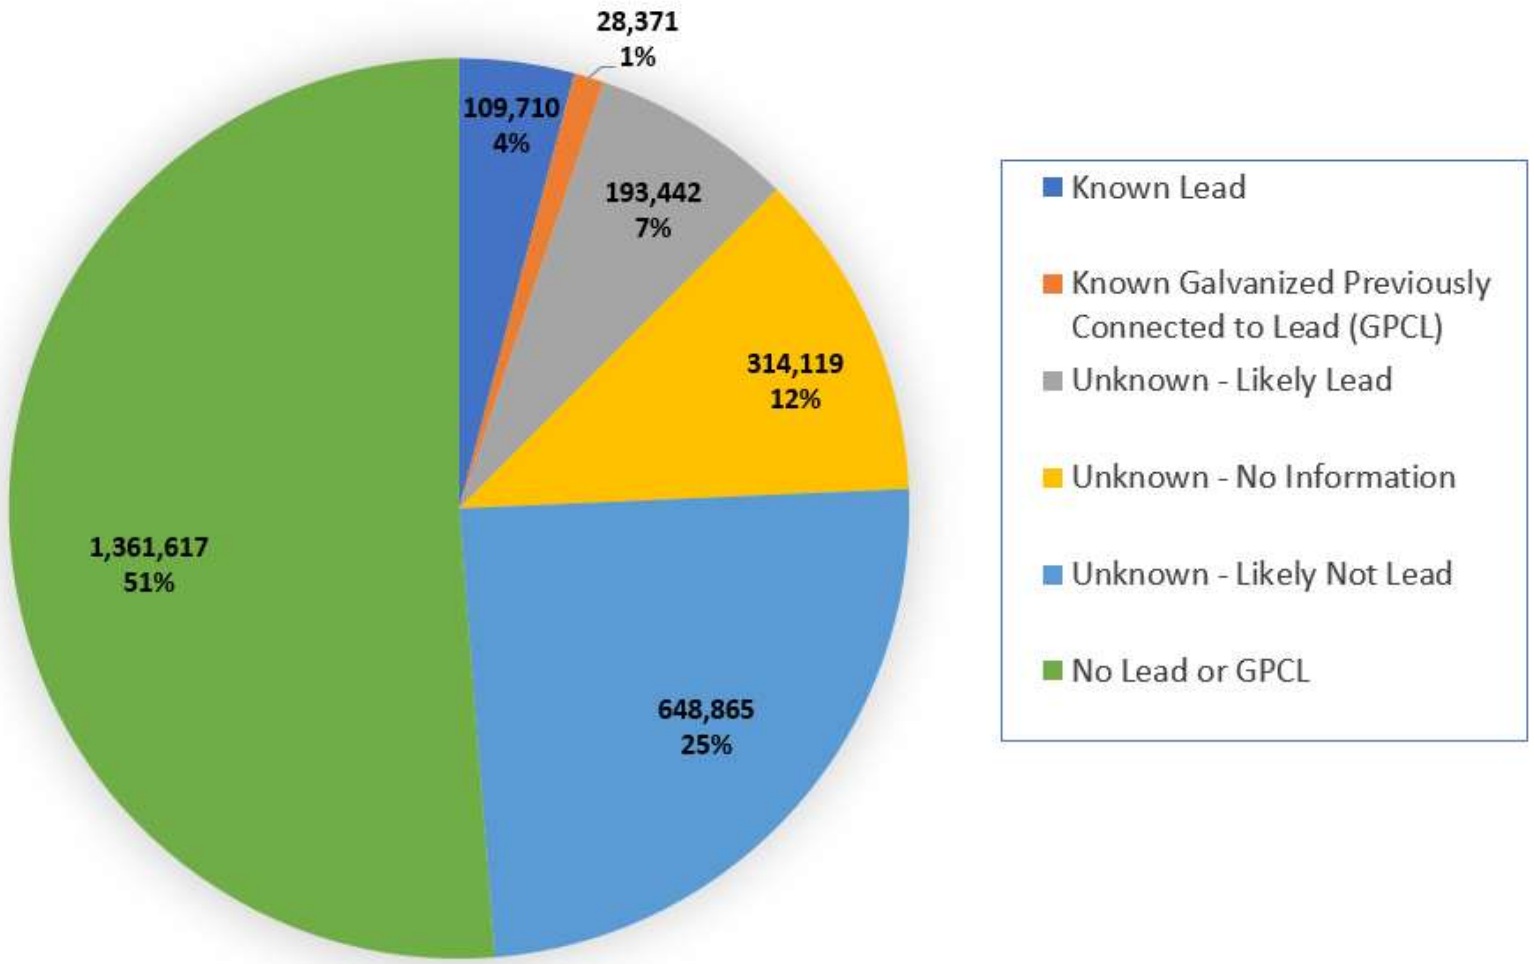
- **Known Lead**: Any portion of the service line contains lead.
- **Known Galvanized Previously Connected to Lead:** A galvanized service line that WAS previously connected to lead.
- **Unknown - Likely Contains Lead**: While not known for certain, service lines the water supply believes are likely to contain lead.
- **Unknown – Material(s) Unknown:** Service line materials are fully unknown. Supply has no information regarding the likelihood of lead being present in the service line.
- **Unknown - Likely Does NOT Contain Lead**: While not known for certain, service lines the water supply believes are NOT likely to contain lead.
- **Contains neither Lead nor Galvanized Previously Connected to Lead:** Service lines that are known to contain NO lead in any portion. These typically include copper, plastic, cast iron, or galvanized that was NEVER connected to lead.

Service Line Materials Estimates by Category: Below are service line material estimates provided by water supplies in their PDSMI. **<u>Note the following limitations on the data below</u>**:

- **This list is incomplete.** EGLE continues to review PDSMI submittals and will update this list periodically as reviews are completed.
- **The numbers below are subject to change.** As EGLE continues to review submittals, clarifications or revisions may be requested of water supplies and could result in adjustments to the data below. For example, in some cases the number of service lines listed by category does not equal the total number of service lines provided. EGLE will update the data as clarifications/corrections are received.
- **The numbers below are estimates.** The numbers reported are based on current water supply information. Water supplies will continue gathering information about service line materials and begin conducting lead service line replacements. Therefore, the numbers of service lines in each category will change over time.

Service Line Materials by Category
Based on Preliminary Distribution System Materials Inventories (PDSMI)

Data set incomplete. Chart will be updated as additional PDSMI data is reviewed.
Check back periodically for updated information. Last updated December 2020.



Estimated Number of Service Lines by Service Line Material
