Chitty, Chitty, Bang, Bang!

Is your car making noises like this? If so, it's time for a tune-up!

The next time it rains, look down at the pavement on your driveway or the nearest parking lot. See any colorful "oil rainbows"? This is a sign that someone's car is leaking fluids.

These rainbows may look pretty, but they are composed of highly toxic materials, such as antifreeze, motor oil, brake fluid, and transmission fluid. When these materials wash down storm drains into lakes and streams they can harm aquatic life such as insects, frogs, and fish.

If your car is leaking, repair the leaks right away or use a drip pan to catch leaks if repairs are delayed.

Take care of your car and protect your vehicle and your local waters!

Ready for a rainy day?

Tip of the Mitt Watershed Council
