

Michigan State Industries has responded to the challenge with a State inmate-staffed approach to managing furniture reclamation. Old furniture systems are broken down into residual materials, which are segregated and sold to approved re-processors. Furniture is disassembled into basic materials such as:

- Aluminum
- Steel
- Cloth
- Wood
- Plastics
- Fasteners

These commodities, in turn, are sold to carefully screened buyers who use the recycled material to produce new products.

# MSI Furniture Reclamation Project

## **Protecting The Environment**

MSI reclamation factories operate in accordance with all applicable federal, state, and local EPA regulations.

MSI is committed to operational procedures that:

- Comply with all laws and regulations
- Demonstrate commitment to pollution prevention
- Are environmentally sound
- Conserve resources
- Are continually improved

Most office furniture system components can be reused!!

Don't send valuable office furnishings to the landfills. Help extend the life of metals, plastics, textiles, and other fine materials. Contact MSI today for all of your recycling needs .

## **Save Time and Money with MSI**

The cost to recycle through MSI is very inexpensive. It probably will cost you less than paying transit and tipping fees at the landfills. MSI will schedule a truck to pickup your old furniture and free up storage space for you!!

**All we require is that you palletize the component parts and assist with the loading.**

You may also use your own trucks for transport if they are available. Most recyclers want to buy only separated metals or plastics. They don't want assembled furniture.

## **Pricing for Services**

Recycling / Reclamation services are offered to State Agencies ONLY. **All recyclables must be palletized.**

**\$1,500 Flat Rate Fee!!**

**(per every Semi Tractor/Trailer load from the Lansing Area only) Please Note:**

**Less than Semi Tractor/Trailer loads from the Lansing Area, contact Dale Baum, MSI Area Mgr. at (517) 780-6169 or e-mail to: [BaumD@michigan.gov](mailto:BaumD@michigan.gov) for a quote. Contact Dale Baum for Any and All special requests.**

## **Landfill Space**

By recycling office furniture, the product as well as the natural resources are diverted from the solid waste stream.

Recycling results in fewer

products filling up limited landfill space. Recycling also conserves labor and manufacturing energy. An average panel system workstation can equal 1000 lbs. of recycled contents diverted from the landfills per station!!!
