MICHIGAN
STATE BOARD OF EDUCATION

Report Of The
Task Force on Integrating Communities and Schools

Sharon Gire and Herbert Moyer, Co-Chairs

June 13, 2002
What happens in a school affects the community, and what happens in the community affects the school. If teachers and school administrators expect to be successful in their primary mission of educating the community’s children, they need to know a great deal about the community and the families from which the children come. (Engaging Families & Communities, Pathways to Educational Success, Decker & Decker, 2000)

Building upon the work of the Full Day/Full Service Schools report and document completed in 1999, the State Board of Education Task Force on Integrating Communities and Schools sought to further highlight the importance of school-community relationships. The work and the recommendations of the Task Force are crucial, as enactment of the No Child Left Behind legislation requires serious commitment to the outcomes of students in schools that are consistently failing to provide adequate education, a commitment already certified by the State Board in their 2001-2002 Strategic Goal: Attain substantial and meaningful improvement in academic achievement for all students, with primary emphasis on chronically underperforming schools. No Child Left Behind also transfers the responsibility of administering the 21st Century Community Learning Centers funds to the Michigan Department of Education, thus making it imperative that the State have a clear vision of the impact that involved communities can have in the success of schools, but more importantly, in the success of children.

Increasingly, it is becoming evident that schools and communities should work closely with each other to meet their mutual goals. With respect to addressing barriers to development and learning and promoting healthy development, schools are finding they can do their job better when they are an integral and positive part of the community. Indeed, for many schools to succeed with their educational mission, they must have the support of community resources such as family members, neighborhood leaders, business groups, religious institutions, public and private agencies, libraries, parks and recreation, community-based organizations, civic groups, and local government. Reciprocally, many community agencies can do their job better by working closely with schools. (School-Community Partnerships: A Guide, The Center for Mental Health in Schools, n.d.)

Thus, the primary purpose of the task group and of the report generated from the work of the Task Group is to

Create a connected community so that all students achieve by making collaborative use of the efforts and resources of all community partners/stakeholders. (Task Force 9/20/2001)
PURPOSE OF THE TASK GROUP/PURPOSE OF THE REPORT

The Integrating Communities and Schools Task Force began meeting in late August 2001 and quickly came to consensus on the unifying purpose of the activities of the group. This goal also serves as the purpose of this report. The group felt that the importance of connections between schools and communities would lead to student achievement. The report is intended to be a useful guide for policymakers, the State Board of Education, the Michigan Department of Education, members of the Legislature, the entire education community, members of multipurpose collaborative bodies, units of government and others.

Moreover, the Task Force wishes this report to be useable. It is the hope of the group that communities and schools will find the information contained within to be of value as they shape policy, reach for and find solutions, and build strong relationships.

Artists, lawyers, psychologists, college faculty and students, business people, neighbors and family members come to support and bolster what schools are working hard to accomplish – ensuring young people’s academic, interpersonal, and career success. Their presence turns schools into places that crackle with the excitement of doing, experiencing and discovering unknown talents and strengths. Community schools open up new channels for learning and self-expression. Students come early and stay late – because they want to. (Community Schools: Partnerships for Excellence, Coalition for Community Schools, 2000)

Goals

Enhance collaboration between communities and schools
- Bring communities and schools together
- Bring together teaching and learning with community support

Provide guidance (where to start)
- Identify critical elements
- Identify best resources
- Identify barriers

(Task Force 9/20/2001)
Rationale

Evaluation data from such organizations as the Academy for Educational Development, the Stanford Research Institute, the Chapin Hall Centers for Children, and others, recently compiled by the independent researcher Joy Dryfoos, demonstrate the positive impact of community schools on student learning, healthy youth development, family well-being, and community life. Results include students doing better on tests, students improving their attendance and behavior, and families having their basic needs met and being more involved in their children’s education [emphasis added]. Moreover, principals and teachers in community schools testify that deep and intentional relationships with community partners are not a distraction, but rather are a significant source of support, giving teachers more time to teach and students more opportunity to learn. (Harkavy, Ira and Martin Blank, Community Schools, Education Week, April 17, 2002)

A May 16, 2002 Detroit Free Press article entitled After School – and All Alone (Kresnak) drew attention to a Michigan’s Children report, After the Bell Rings. A shocking statistic reported in the Free Press article that was cited in After the Bell Rings is the fact that nearly half of all children in elementary school report caring for themselves before or after school. The State Child Care Profile for Children with Employed Mothers: Michigan by the Urban Institute in Washington, DC provided the statistic, and Michigan’s Children warns that increased work requirements for single parents who receive welfare benefits may put their children at greater risk if attention is not paid to the supervision of children during out-of-school time.

But the integration of communities and schools sought by the Task Force goes beyond solely planning for out-of-school time to a true supportive, reciprocal integration of community support for the school and schools providing a sort of sustenance for the community. Lizbeth Schorr’s 1998 book, Common Purpose: Strengthening Families and Neighborhoods to Rebuild America, primarily focused on communities in which there are significant challenges, but the principles that she espoused can be applied to any setting. The importance of the relationships that are reciprocal in nature assists in the integration of the approach to address the needs of a community and “the idea that the multiple and interrelated problems…require multiple and interrelated solutions.”

The Task Force determined that to reach the goals identified, specific steps and activities were to be accomplished. Subcommittees were formed and charged to develop reports to guide communities and schools in the integration process. The four subcommittees were formed around the following:
• Building Awareness
• Identify Resources and Processes
• Identify Successful Programs, Best Practices and Tools
• Identify Opportunities and Challenges

Each subcommittee was asked to develop concrete policy recommendations using sound data based on research that can be used in order to educate and influence policy makers. **Full copies of the reports of each subcommittee are contained in the appendix.** Commonalities existed across the subcommittees, thus the recommendations have been addressed as a whole, rather than in the individual subcommittee categories.

**Recommendations**

It is recommended that:

1. The State Board direct the Superintendent to produce a yearly document outlining all existing financial sources of funding (with eligibility criteria) that can be used for interagency collaborative projects and to disseminate the document to school superintendents, intermediate school district superintendents, multi-purpose collaborative bodies, and interested community groups.

2. The State Board encourage local collaboration by enacting through its grants and contract requirements proof of active collaboration in related school actions.

3. The State Board encourage school districts to get actively involved in their local multipurpose collaborative body (MPCB).

4. The State Board seek legislation where necessary and create policy where necessary that allows school districts greater flexibility in the use of existing financial resources to meet identified community needs. Such needs may include school readiness, family resources, and out-of-school time programming.

Examples of existing financial resources may include funding designated through *No Child Left Behind* (Title funding such as Safe and Drug Free Schools and 21st Century Community Learning Centers [CCLC]), and Section 31a of the State School Aid Act. A specific example of the use of funds would be to encourage and to allow districts to use funds to support leadership for school/community integration, and secure the training needed for effective implementation. The leadership position should be provided by someone who has the following characteristics and who may be from outside the school system.
5. The State Board advocate for additional state funding for community school programs to supplement the 21st CCLC program.

Several states provide funding for before/after school programs.

6. The State Board advocate for continued use of funds from other state agencies to support school and community integration, and encourage the provision of funding to support community driven initiatives.

An example is the Family Independence Agency’s use of Temporary Assistance for Needy Families (TANF) funds for before and after school programs and the Department of Community Health’s expenditures for school-based health clinics. This advocacy may take on the guise of providing policy support for the flexible use of funds to share in the realization of identified community needs, and requiring evaluative oversight of the multipurpose collaborative bodies (MPCBs) to verify the effective use of such flexibility.

7. The State Board direct the Superintendent to develop a guide for local districts that outlines how to promote community integration, how to identify assets and build an awareness of need, how to identify and be involved with various stakeholders, how to involve and be involved with business, how to build staff awareness and buy-in, how to identify and involve various community groups, and how to market in the community.

8. The State Board advocate for rules, regulations and legislation that enable provision of quality services taking place in school facilities before and after the school day.

Schools follow safety and sanitation rules and regulations during the portion of the day that is considered “instructional.” When planning programs for out-of-school time, many schools have been unable to meet the more stringent standards for fire safety required to become licensed through the Division of Child Day Care Licensing of the Department of Consumer and Industry Services, and thus, have been unable to offer school-based services before and after school.

9. The State Board develop and disseminate model standards for programs offered during out-of-school time.

10. The State Board direct the Superintendent to identify, determine mechanisms to disseminate and provide links to and models for interagency-school collaboration, (i.e. mentoring, full day and full service schools, service learning), including developing a variety of tools using multiple media opportunities to support communities and schools gaining knowledge (i.e., CD-ROM, web site, video for use in cable access, etc.).

11. The State Board direct the Superintendent to develop a process for providing technical assistance in developing, improving and sustaining interagency-school collaboration. Communities will require a variety of resources to support their efforts to create local initiatives that meet identified needs in the community (i.e. Financial, Planning,
Management, Leadership, How to Build a Collaborative Initiative, Developing Local Long Term Sustainability, and Assessment). Encourage or require that the Michigan Department of Education establish a network of regional exemplary programs as part of funding grants and/or establishing programs in order to leverage field expertise for the operational support of other like-programs in that area.

12. Direct the Superintendent to work with state level interagency partners to develop training for community and school partners to promote mutual understanding of issues and concerns. Include selection and training of leadership, selection and orientation of advisory groups, “How To Talk School” (understand MEAP, state standards and benchmarks, North Central Association accreditation, Michigan State Board of Education Standards for Accreditation, school culture, etc.), how to relate to community organizations and agencies, and the role of the MPCB.

13. The State Board encourage school districts to create a local plan for promoting and sustaining community/school collaboration. The plan might include:

- Developing a written plan that includes measurable goals and accountability for how funds are used and what results are expected.

- Using a strength based planning process to identify assets, assess needs and gaps, programs, resources, partners etc.

- Conducting a community resource audit and assessing possible areas of collaboration. Community partners and parents would be integrated into identifying internal and external resources.

- Identifying a process to collect meaningful, useful data that can be posted to the State website.

- Developing a long-term sustainability plan for initiatives that integrate communities and schools. (Examples: After-school programs, 21st Century Community Learning Centers, school based health clinics, investment strategies, use of short-term funding to build capacity). The choice of initiatives would be determined by the collaborative planning process in the local community.

- Allowing time for the initiative to show improvement. Communities need at least five years of sustained efforts to show improvements. Build accountability into the system – report the results.
Appendix A

Subcommittee Reports
Building Awareness Sub-committee Report

In order to build awareness for the importance of integrating schools and communities it was determined that we need to appeal to:

1. students
2. parents
3. civic organizations
4. chambers of commerce
5. senior citizens
6. parents of former students
7. businesses
8. school personnel/school boards
9. unions
10. faith-based organizations
11. health agencies

Strategies:

1. Use student leadership in promoting communication with community.
2. Encourage relationships between staff and civic organizations.
3. Meet with city chambers of commerce to develop pacts with businesses and schools.
4. Set up models for businesses to support schools in a district.
5. Media involvement: promotion and marketing
6. Develop media implementation kits for districts
7. State license plates: Promote Public Education
8. Billboards and bus posters: “What have you done for your local schools today?”

Challenges:

1. Change the Thinking of the School Community. Currently the schools are not always receptive to including the community in schools. While some schools have an open-door attitude to parents and the community, others are very reticent to have the public at-large using the school facilities or being involved in the classroom activities.

2. Find ways to bring the community into the schools. Each group identified above must have ways to be involved.

3. Identify agencies in the community that meet specific needs. We need to develop a contact list.

4. Develop a list of kinds of activities to involve the community. i.e. best practices

5. Develop a benefits document to show how these activities help.
Identify Resources and Processes

**Goal:** To identify resources and processes to create a connected community so that all students achieve by using the efforts and resources collaboratively of all community partners and stakeholders.

**Recommendations**

I. State Board of Education

14. Produce a yearly document outlining all existing financial sources of funding (with eligibility criteria) that can be used for interagency collaborative projects. Disseminate document to school superintendents, ISD’s, multi-purpose collaborative bodies, etc.

15. Create policy that allows school districts greater flexibility to use existing financial resources to meet identified community needs such as school readiness. (Examples of existing financial resources: No Child Left Behind funding, Title funding, Section 31.a, Safe and Drug Free Schools, 21st CCLC etc.)

16. Provide models for interagency-school collaboration, ie. mentoring, full service schools, service learning, etc.

17. Develop a process for providing technical assistance on developing, improving and sustaining interagency-school collaboration. Communities will require a variety of resources to support their efforts to create local initiatives that meet identified needs in the community, ie. Financial, Planning, Management, Leadership, How to Build a Collaborative Initiative, Developing Local Long Term Sustainability, and Assessment.

18. Develop a training for community and school partners to promote mutual understanding of issues and concerns. Include “How To Talk School” (understand MEAP, state standards and benchmarks, North Central Association accreditation, Michigan State Board of Education Standards for Accreditation, school culture, etc.), how to relate to community organizations and agencies and the role of MPCB.

19. Advocate continued use of funds from other state agencies to support school and community integration, ex. TANF funds for before and after school programs, and school based health clinics.

20. Allow districts to use funds to support a position(s) for leadership of school/community integration (training needed - possibly designed and delivered by the National Center for Community Education). Could be someone or some agency from outside the school system. (See number 2 above for possible funding sources.)

21. Explore additional state funding for community school programs to supplement the 21st CCLC program. Several states provide funding for before/after school programs Reference: State Legislative Investments in School-Age Children and Youth – The Finance Project
II. Local Level

- Provide and encourage opportunities for school district participation in their local multi-purpose collaborative planning process.

- Develop a vision for school-community collaboration based on student/district needs, and supported by research based best practice and data. What community needs exist? Are there any service gaps? Determine how this effort will contribute to narrowing gaps in student achievement, meeting identified needs, reducing crime, improving health, etc.

- Create a local plan for promoting and sustaining community school collaboration.

- Develop a written plan that includes measurable goals and accountability for how funds are used and what results are expected.

- Use an asset based planning process to identify needs and gaps, programs, resources, partners etc.

- Conduct a community resource audit and assess possible areas of collaboration community partners and parents (who else could do this better?) Identify internal and external resources.

- Develop a long term sustainability plan for initiatives that integrate communities and schools. (examples: After-school programs, 21st Century Community Learning Centers, school based health clinics). The initiatives would be determined by the collaborative planning process in the local community.

- Allow time for the initiative to show improvement. Communities need at least five years of sustained efforts to show improvements. Build accountability into the system – report the results.

Successful Programs, Best Practices, and Tools

PURPOSE: Encourage communities to create a connected community of partners so that all students learn and achieve.

In order to achieve this purpose the following examples are being provided as a guide for others who have made a commitment to integrating school and community for the improvement of student learning. These examples met the following criteria, which are held to be essential for this process to contribute successfully to school improvement.

- Broad, active community collaboration and program control based on common community goals which include student success in school, usually through the County MPCB (Multi-Purpose Collaborative Body)
- Community planning is strengths based usually founded on an assets approach to the identification of needs, gaps in service, and program development based on the resources of the community partners.
- Programs are based on a written plan that is integrated with the overall community plan for success for community members of all ages in a continuum of care.
- The Schools have become full active partners in the community collaborative process and have learned to practice “agency speak” and “business speak” and have helped others with “education speak”.

### Recommendations: The following recommendations are made based on some of the common themes that are suggested from the examples provided here

- Recommend/require all school districts to get actively involved in their local multipurpose collaborative body (MPCB)
- Require that all grant programs where collaboration is a proven asset to the realization of the grant purpose to include successful collaborative involvement in the community as a criteria for awarding funds. Require MPCB sign-off verifying the active and effective on-going involvement of the schools.
- Provide policy support for the flexible use of funds to share in the realization of identified community needs. Require evaluative oversight of the MPCB to verify the effective use of such flexibility.
- Allow districts to use funds to collaborate in the administrative oversight of school based community designed programs.
- Require that sustainability plans be developed as part of any integrated school – community program based on community planning for the use of community resources.
- Encourage the provision of funding to support community driven initiatives.
• Encourage or require that the MDE establish a network of regional exemplary programs as part of funding grants and/or establishing programs in order to leverage field expertise for the operational support of other like-programs in that area. This would be intended to extend the ability of the reduced MDE staff to more adequately provide support and oversight of funded programs.
Appendix B

Michigan State Board of Education

Positions of the State Board Relevant to Integrating Communities and Schools
The State Board of Education believes that the education of students is enhanced by the involvement of parents and families in their children’s education. We advocate strong connections between the home, school and the community as one means of reducing barriers to student achievement. Studies demonstrate that when parents are involved in their children’s education, the attitudes, behaviors and achievement of students are positively enhanced.

Education is an integral part of our society. It is important for all parties to be at the table, providing input and resources to better the learning outcomes for our students. Working in genuine partnerships is mutually beneficial. Developing cooperative efforts and meaningful involvement contribute to improved schools and successful students.

Schools must welcome the public’s involvement, and recognize and tap the strengths, dynamism and resources of all those who wish to participate with the schools in practical and tangible ways. Teacher training institutions also have a responsibility to provide training in family involvement.

The State Board of Education hereby recommends that every school district develop a Family Involvement Plan which will engage families, educators, businesses and other community members in education. Such plans will include outreach strategies, related home learning activities, community resources, and supportive school and district policies and actions.

The State Board of Education will disseminate model family involvement plans to assist local districts and school buildings in developing local plans.

Adopted May 15, 1997
POLICIES FOR AFFIRMING SERVICE LEARNING

All Michigan citizens have the critical responsibility to participate in community and civic life. The State Board of Education reaffirms the fundamental role of K-12 education in preparing each generation for active, informed citizenship.

We recognize the integral role and exemplary efforts of Michigan schools in developing creative ways to make learning through service important components to a quality education.

Service learning is a teaching/learning strategy that integrates service to the community and volunteerism into the core academic curriculum in a way that helps students make real-world connections between their academic studies and solving community problems. Service learning gives students answers.

Today, approximately one-third of public elementary and secondary schools use service learning in their educational programs nationally. Service learning is currently improving schools.

Organizations that advocate for service learning standards have worked tirelessly to organize lessons that support the key role of public education in our democracy, the preparation of knowledgeable leaders, and supporting future citizen participation in society for the common good.

Service Learning is in keeping with State Board of Education policies on Character, Family Involvement, Safe Schools, Effective Learning Environments, Prevention of Bullying, and Encouraging Tolerance in Public Schools.

POLICIES

We believe that Service Learning is a valuable tool that address the long term goals of quality student academic achievement, workforce readiness, safe and secure learning environments, and a strengthened democracy and civil society. Therefore, it is the policy of the State Board of Education to encourage public schools to integrate service learning components into the classroom learning environment.

We accept that service learning lesson planning and integration into the classroom learning environment is an effort worthy of further replication, adoption and study. Teacher-tested, standards-based lessons and resources can provide high quality, student-friendly academic units of study directly aligned with the Michigan Curriculum Framework. Therefore, it is the policy of the State Board of Education that public schools research and utilize service learning as a powerful teaching method that can help to make learning exciting, meaningful, relevant, and
lasting for all students. We know that with the help of teachers, service learning lessons can promote new knowledge and understanding that will translate critical concepts in a structured age-appropriate way to children as part of their education in democratic citizenship. Therefore, it is the policy of the State Board of Education to encourage Michigan teachers to select and integrate academic lessons from service-learning activities to enrich student understanding of civil society and the role of free people in a democracy.

These Policies for Affirming Service Learning are guidelines for local schools as they work to achieve a positive learning atmosphere for all Michigan children. These Policies shall also serve as the policy framework for the Department of Education, as well as programs in other state administrative agencies over which the State Board of Education possesses policymaking authority. The State Board shall also use this policy framework to develop recommendations for the Legislature, the Governor, and state agencies; to formulate grant criteria; and to develop and implement other State Board programs, activities, and policies.
