
5. Next Steps

This report contains the consultant proposal on how to widen M-15 if it is permitted by state and federal reviewers. It is to be discussed with the public in early April. That input will be included in an Environmental Assessment made available for circulation in May. A public hearing is tentatively scheduled for June. Following the public hearing, a recommendation on how to improve M-15 will be made. It will be available for public review in early October 2001.
