

STATEWIDE NETWORK OF AGENCY PHOTOS

Mugshots help solve crimes but are of no use if they can't be put in the hands of the law enforcement professional that needs them. Criminals don't stay in one place, which makes the sharing of information critical. The Statewide Network of Agency Photos (SNAP) is a tool that allows agencies to share digital criminal images across jurisdictional boundaries. Images are submitted digitally, using live scan terminals, along with fingerprints. After positive identification is made, the image is stored in a database that can be searched through a web browser. SNAP will store not only mugshots, but also images of scars, marks and tattoos. Sharing of images throughout the state will increase the efficiencies and effectiveness of all agencies. Each agency with SNAP access will be able to search a statewide mugbook by characteristics such as:

- ◆ Race, sex, height, & weight
- ◆ Hair and eye color
- ◆ Facial hair
- ◆ Hair length
- ◆ Location and size of scar, mark, or tattoo
- ◆ Type of tattoo

SNAP will facilitate creating digital lineups and aid in suspect identification. Additionally, the system incorporates facial recognition technology. Images captured from security cameras or other digital imaging devices can be analyzed by the system to search for potential suspects.

WHAT CAN SNAP DO FOR YOU?

- ✓ Create legally compliant digital lineups quickly and easily – you **save on overtime and travel costs** trying to assemble the appropriate mugshots.
- ✓ Utilize the power of facial recognition technology – **quickly identify** suspects from security photos or other digital images **saving hours** of investigative time
- ✓ Assist in identifying individuals – quickly know who you are dealing with – this means **increased officer safety**
