

TCN Code	Definition	Description
ACK	Acknowledged Receipt of Message	Record retrieved and stored at PACC/PAAM awaiting response
ARO	Invalid ORI entered.	The ORI entered was invalid. Check arresting agency's ORI to make sure it is a valid and correct ORI number.
BLKORI	Arresting Agency ORI Field Blank	Arresting agency record in ACT database does not include ORI – needs to be entered.
CMP	Completed Transmission	Record successfully entered in criminal history
COF	CTN On File	CTN already joined to a TCN/Incident number on CHR – can ONLY be corrected by MSP.
COR	TCN is already on the CHR with a different CTN	CTN that was entered does NOT match the CTN already on file for that TCN/OCA-can only be corrected by MSP
ERR	General Error	Non-specified error. Check all fields for possible incorrect or missing data – if you find NO errors, this will be sent to MSP for correction the following day
FMT	Format Error	Incorrect space or character in field(s)-review ALL information in fields for possible incorrect data.
IVCTN	CTN Invalid	CTN was entered incorrectly. Verify the CTN and modify if needed.
PND	No record on file	Record not matched in criminal history. Verify Complaint/Incident/OCA numbers to match exactly as law enforcement has entered it.
RSD	Re-send TCN record	Re-send prosecutor's charge data
VER	Received verified SID	Received SID from CHR (Record matched CHR-returned SID)

COF and **COR**- can ONLY be corrected by MSP staff. Once you have received an error, the transaction will automatically be sent to MSP staff the following day for correction. You may re-send your transactions after a few days to possibly obtain a **CMP** – completed code.

PND - Check to make sure that the complaint/Incident numbers (as law enforcement has used) are entered correctly in the incident number field in ACT, if both are correct, this means that if its not an error on the prosecutor's end (not putting the correct incident/complaint number EXACTLY as law enforcement has entered it) then it means that the arrest is NOT on the Criminal History Record and that your charge segment can not link/match up to the arrest/incident and will be stored into our "pending" file until that TCN/arrest is populated on the CHR. Once you receive a **PND** status, this transaction will automatically be sent to MSP staff the following day for correction. We will notify the arresting agency that the arrest segment is not on the criminal history record and will request information to be re-sent or enter the arrest segment manually here. You may re-send your transactions after a few days to possibly obtain a **CMP** status code back.

RSD- This is used to re-send a record. If anything on the TCN Update screen needs to be edited, click "edit" and correct the problem then click the "save" button and this will re-send the record.
