### SECTION III WORK STATEMENT

#### A. Brief Description of Work

This project consists of customization and implementation of the MIDB Inquiry and Reporting System (MIRS) for use within the Department of Information Technology. MIRS is a State-owned web-based software application currently installed on State owned servers used by the Departments of Agriculture, Treasury and Civil Service.

#### B. Background on the work requested

DIT provides information technology (IT) services and commodities to State of Michigan Executive Office departments and agencies. The DIT bills State agencies for those services and commodities on a monthly basis. DIT's funding structure includes appropriated and non-appropriated funding sources. The department's program structure is complex and there are no standardized reports that meet the department's budget and financial reporting needs.

DIT staff has found that the MIDB data warehouse is difficult and cumbersome to use, therefore new queries and reports have to be developed to answer analytical questions that arise during the course of business operations. MIDB has many tables and views. The relationships of each of the tables are complex. A user analyst developing new queries and reports must understand these relationships to ensure that the output information is correct. Also the generic MAIN control reports do not meet the operational reporting needs of the Department.

#### C. Objectives

To provide a system for standardized budget and financial reporting based on the MDIT account coding structure.

#### D. Agency technical environment for the work

Oracle 9.2.08  
Windows 2003 Server

- The contractor will work with the MDIT Project Manager and other MDIT resources to gather, verify and validate technical and functional requirements for the project. All requirements will be documented. Technical requirements will include server requirements.
- The contractor will work with the MDIT Project Manager and other MDIT resources to develop a work plan that outlines the tasks, hours, and personnel required to meet the functional and technical requirements.
- The contractor will customize and provide enhancements to the MIRS that will meet MDIT's functional and technical requirements. The contractor shall provide configuration, modification, interfaces, implementation, and testing services.

- o The contractor will provide training and knowledge transfer for system administration and functional use of the MIRS.
- o The contractor will provide training, technical and system administration documentation.
