The contractor services will include the planning and executing of detail plans for LASR, upgrading the application, providing Oracle Financials Application functional and administrative support and working with other project managers of critical projects to make sure interfaces within LASR are current.

The current LASR application is developing and implementing several major initiatives that must be tracked to ensure successful implementation. This includes Regional Accounting, Dual County office setup and interfaces to the Bridges Application, in addition to maintaining the interfaces to the legacy system during the full release of Bridges. The application is undergoing consolidation of the accounting units within DHS. Counties are being merged together for cost savings to the state, which affects the setup and implementation of the daily tasks of the local offices within LASR. There are two efforts in place, one of which is a Regional Accounting approach, which is the merging of several accounting units within the counties in the Upper and Lower Peninsula of Michigan. The other is an ongoing effort on Dual County setups within the state. In addition to these tasks, upgrades to the current Oracle Financial Application needs to be completed along with the customization of the forms and reports within LASR.

The LASR application will also need to interface to the new Bridges Application during its pilot and its continuous building and releasing of the application. LASR will have to continue to exchange information in both the legacy systems and Bridges at the same time and complete any requirement changes for the remaining releases.

The LASR application interacts with different applications within the agency and outside of it. Information on Vendors is extracted from MAIN for verification. The address information for clients is extracted from the Bull Mainframe and information is passed to Bull Mainframe for Income Tax Offset recoupment. The LASR application allows automatic FTP's to various requesters of accounting information. Several customized reports are extracted from this system to provide data and reimbursement activity tracking for both the legislature and the state treasury, which disperses funds to the local offices. This functionality will have to be maintained during Bridges implementation and the needed upgrade to the next highest level patch set of Oracle Financials and the upgrade to Oracle 10g client.
