AWTEC exhibits for 4th year at Plymouth Green Street Fair

On May 4th, 5th & 6th, 2012, AWTEC hosted an exhibit to prove our “green” efforts at the Plymouth Green Street Fair. This was the 4th year in a row participating in this event. The Green Street Fair helps educate and inform people about the benefits of green, organic and eco-friendly products and services. An estimated 90,000 people attended the 3 day event with over 200 community groups and partnering organizations from all over Michigan exhibiting.

This year we featured three component part remanufacturing projects. These included the Sun Gear Bushing, YL housing bearing bore and the oil pump stator shaft bushing rework projects. We displayed the actual parts before and after rework or “remanufacture”. We also gave statistics on production quantities for each component and the positive effect on the environment. Remanufacturing allows for a reduction of our carbon footprint. Another advantage is it saves metal from being re-harvested and manufactured again. This greatly reduces greenhouse gas.

The fuel efficient Scion iQ car was displayed with its transmission, a display model Continuous Variable Transmission. This was a big hit, thousands of visitors asked questions about the CVT’s functionality and the car itself.

AWTEC employees volunteer at the booth and show their commitment to the company, and also to being GREEN. Team Members are able to talk about what they do and where they work with a sense of pride!

Chrysan Industries and Nippon Oil also provided support material on the CVT functionality and donated gifts for visitors.
