

Clinton River Sampling and Monitoring

General Motors Warren Tech Center, Clinton River Watershed Council, L'Anse Creuse Middle School, and Green Oaks Elementary

The General Motors Warren Tech Center team spent three days monitoring and sampling the Clinton River Watershed with students from surrounding schools. Water samples were collected and analyzed, physical descriptions were recorded, and an inventory of aquatic plants and macro-invertebrates were logged-in order to determine the overall health of the watershed. This project helped to build community awareness of human impacts on watersheds and perpetuating community interest in the environment.
