

## Well Location download and link to DEQ FTP site

About 4 MB, check the date in the file name to find when it was last updated. This zipped (compressed) file must be saved to your own computer (it will not open from the server) and unzipped before it can be opened with Microsoft Access. (If you do not have Microsoft Access, use the [online database](#).)

The download is on an ftp server at:

**[ftp://ftp.deq.state.mi.us/deq-outgoing/Geological\\_Survey\\_Data/](ftp://ftp.deq.state.mi.us/deq-outgoing/Geological_Survey_Data/)**

Username = **deq-public-ftp**

password = **Jumb1355#** (*the first 5 characters are letters*)

The link is not 'live'. Type it into the address bar of your web browser.

If you can't connect, usually a pop-up blocker or a company firewall is stopping it, or it could be something on your computer. Contact your IT person to fix this, or take a laptop to a nearby wi-fi hot spot and you'll be able to connect. We can't help you fix this. All we can do is check to see that the site is not temporarily down.

There is a lockout "feature" that will block access to your ID after three (3) unsuccessful attempts to log in. The lockout will release after one (1) hour.
