Natural Gas Compressor
Station

Address

3515 Childs Lake Rd
Milford, Michigan
48381

Oakland County

"Earning the Clean Corporate Citizen Award is a direct result of the hard work and environmental focus of our team at Milford and the continued support of our Executive Team. Keeping our site, city, state and planet clean and accessible for our children and our children's children is what drives us to continue to push the envelope with our future projects on site!"

Milford Compressor Station is a booster station which compresses gas that is moving East to Belle River or South to Willow Gate Station. Milford has four 4,000 HP Enterprise Delaval Compressors that operate on an On Demand basis. The station was built in 1979 on 51.6 acres and since that time little has changed at the site in regards to our site footprint.

Milford is proud to hoist the MVPP safety flag, it was the first gas site in the company to obtain this award. Our team takes recycling and Wildlife Habitat very seriously. Milford received its Wildlife Habitat Certification in 2009. We have been recycling at this site since 2009. We are proud of our accomplishments in all of these areas.

Milford has changed out all of its florescent lighting to T-12 lights, yard lights were changed out to LED, we have replaced and upgraded our furnaces for the auxiliary building and are in the process of replacing the hot water heaters with on demand water heaters to reduce our energy use. The turbochargers on the compressor units were replaced to improve operation and lower emissions. We have also upgraded two of our units to Precombustion Chamber Heads to also reduce our emissions.

Milford is focused on working with our vendors to purchase as many chemicals and cleaning agents as possible that are Green. We are proud to have at least four vendors that now supply us with only green products for our site. The environment and our air quality are very much a focus at Milford and we will continue to do projects and work with wildlife habitat to strengthen and improve our involvement in Clean Corporate Citizen. Reducing our footprint is our goal at Milford.
