Holland, MI 49424***

Magna Engineered Glass currently employs over 600 employees in Holland, MI. In addition to R.I.M. capabilities, this plant performs complex window assemblies in the area of Hardware Bonding and Hardware Assembly, which along with our single sided encapsulation create flush glass appearances when assembled in the vehicle.

Despite the launch of over 10 programs and the addition of over 100 employees over the past year our facility was still able to achieve an 11% reduction in Natural Gas Usage. Environmental responsibility has long been a focus for our division.

Our Recycling Committee has been refocused into the newly formed Energy/Waste Reduction & Recycling Team. Efforts will continue to be made to increase recycling, reduce waste to landfill, and energy reduction.

Magna Corporate also has a strong focus on environmental improvements. Data is collected each month on energy usage and waste totals for each division.
