

Middle School Plant Tours

General Motors Orion Assembly, Lake Orion Scripps Middle School, and Lake Orion Waldon Middle School

Each year General Motors Orion Assembly hosts two Lake Orion Middle Schools to educate students about resource and energy conservation at General Motor's manufacturing sites. The students were able to tour the plant and were educated on the environmental activities and program initiatives implemented at the plant. They were able to observe first hand all the important changes made at the facility that will continue to have a positive impact on the environment. Additionally, plant employees worked with the same group of students on Project GREEN, to conduct research to determine stream health.
