The Michigan Department of Natural Resources and Environment (DNRE) will not discriminate against any individual or group on the basis of race, sex, religion, age, national origin, color, marital status, disability or political beliefs. Questions or concerns should be directed to the DNRE Office of Human Resources, P.O. Box 30473, Lansing, MI 48909.

# INTRODUCTION

**INTRODUCTION**

Thank you for your interest in our *Michigan Clean Air Consultant Directory, Eighth Edition (Directory)*. The Office of Pollution Prevention and Compliance Assistance (OPPCA) of the Michigan Department of Natural Resources and Environment (DNRE) developed this *Directory* to provide a basic list of statewide air quality consultants, industrial hygienists, and analytical laboratories that perform varying levels of outdoor air pollution or indoor air quality control work and have one or more offices physically located in Michigan. This *Directory* is by no means an inclusive listing of all of the state’s air quality consultants, industrial hygienists, and analytical laboratories. Rather, the entities listed in this *Directory* have agreed to be a part of this publication. Each entry contains the consultant’s own description and identification of their expertise, qualifications, specialties, staffing, and other experience.

**Note:** The state of Michigan, DNRE, does not recommend or endorse the services or products of any particular company listed herein. The quality of service provided by each company is not known or implied by this listing. The DNRE provides this *Directory* as a courtesy to business, industry, and the general public; and it does not represent that the companies are, or are not, in compliance with or knowledgeable about all applicable federal, state, and local environmental laws.

We encourage you to use the *Directory’s* contents as a starting point in finding a solution to your environmental or health-related problem.

The *Directory* is divided into four helpful sections:

**Section I:     **Understanding the Differences Between Outdoor and Indoor Air Pollution****

Section I explains the differences between outdoor and indoor air pollution, which federal and state agencies regulate each type of air pollution, and lists applicable air quality consultants along with the services they provide.

**Section II:    **The Air Quality Service Locator****

Section II provides a reference table that allows readers to quickly locate statewide air quality consultants, industrial hygienists, and analytical laboratories according to the specific type(s) of air pollution control or air quality services and activities they perform.

**Section III:   **Air Quality Consultants, Industrial Hygienists, and Analytical Laboratories****

Sections III contains a list of air quality consultants, which includes each company’s name, location, and contact information, along with a short introduction or description of the company. The entry also includes a simple chart entitled, “Types of Air Quality Services Available” showing the types of indoor or outdoor air quality services available from the respective company based on the activity descriptions found in Section I. If applicable, each company entry also contains a list of branch office affiliations in the state for an alternate means of contact.

**Section IV:    **Listing of Air Quality Consultants by County****

For those looking for an air quality professional within their geographic proximity, Section IV lists the *Directory’s* air quality professionals sorted alphabetically by Michigan county location.

**OTHER HELPFUL RESOURCES**

Selecting a consultant to solve an outdoor or indoor air quality problem can be a very difficult and time consuming process. In an effort to help businesses and individuals select the most appropriate environmental professional to accomplish certain tasks, the OPPCA of the DNRE has developed an additional resource entitled, [Working with an Environmental Consultant](#). This publication is a separate yet complementary fact sheet that can be used in conjunction with this *Directory*.

Some of the highlights of this publication include:

- Help in determining when an environmental professional is needed.
- A description of the types of environmental consultants that are available and the types of work each may perform.
- Tips for the selection of, contract negotiation with, and management of environmental professionals.
- A list of organizations that provide support services for the clients of contractual consultants.
- General guidance checklists and sample questionnaires that can be used to evaluate and compare the services of various types of multimedia environmental professionals.

Other helpful online resources for solving indoor air quality problems are offered by the American Industrial Hygiene Association (AIHA) and the U.S. Environmental Protection Agency (U.S. EPA).

AIHA provides a list of consumer brochures that cover some common indoor air quality problems, how to detect them, and what solutions are available to resolve them. The AIHA consumers' brochures are located at: <http://www.aiha.org/news-pubs/newsroom/Pages/ConsumerBrochures.aspx>.

or by contacting AIHA directly at:

2700 Prosperity Ave., Suite 250  
Fairfax, VA 22031  
Telephone: (703) 849-8888

Studies of air pollution conducted by the U.S. EPA estimate indoor levels of pollutants to be 2-5 times, and in some cases more than 100 times, higher than outdoor levels. These levels of indoor air pollutants are a concern because people spend about 90 percent of their time indoors. To provide awareness of these pollutants, the U.S. EPA's Web site offers a number of guidance publications, a list of frequently asked questions, hotline numbers, and background information on air quality related topics such as asthma, mold/moisture, and radon. The U.S. EPA's Indoor Air Quality Web site is located at: [www.epa.gov/iaq/index.html](http://www.epa.gov/iaq/index.html).

Guidance publications can also be obtained by contacting U.S. EPA directly at:

U.S. Environmental Protection Agency  
National Service Center for Environmental Publications (NSCEP)  
P.O. Box 42419  
Cincinnati, OH 45242-0419  
Telephone: (800) 490-9198

# SECTION I

## UNDERSTANDING THE DIFFERENCES BETWEEN OUTDOOR AND INDOOR AIR POLLUTION

Most often, air quality consultants:

- Supplement existing staff or a business knowledge base.
- Provide technical or economic analyses (e.g., quality assurance of company data/reports).
- Develop alternatives and make recommendations (i.e., site remediation).
- Complete a one-time project.
- Assist with equipment selection or purchase, installation, and start-up.
- Complete annual tasks such as facility audits, emissions inventory reporting, permit applications, emissions testing, indoor air quality testing, etc.
- Negotiate or enforce environmental, safety, or health compliance.
- Provide engineering support through studies, design, and construction assistance.

# SECTION II

# AIR QUALITY SERVICE LOCATOR

MICHIGAN CLEAN AIR CONSULTANT DIRECTORY

**AIR QUALITY SERVICE LOCATOR**

This reference table is provided as a courtesy to business, industry, and the general public by the Michigan Department of Natural Resources and Environment (MDNRE), Office of Pollution Prevention and Compliance Assistance. It is a tool that can be used to quickly locate those air quality consultants, analytical labs, and industrial hygienists that perform certain types of air quality services in Michigan. More information on each consultant can be found by referencing the “Page Locator” adjacent and turning to Sections III and IV of this publication for additional contact information.

Altech specializes in the assessment, engineering, manufacturing, and installation of systems for air abatement, odor control, and industrial wastewater treatment in the USA and Canada. Our expertise is in providing workable, cost effective environmental solutions with a focus on improving the bottom line. Our team of engineers has a thorough understanding of all aspects of industrial processes, from food and chemical processing to alternative energy applications. This allows Altech to provide a full range of process engineering services including air and water permitting, air pollution control, and wastewater treatment together with equipment design, manufacture, and installation. Altech is a full service company that specializes in providing a complete environmental turnkey package with an emphasis on working within our clients' budgetary needs.

At Burke Engineering, your inquiries will be addressed by experienced professionals, not marketing contacts. Our 30 years of staff experience can help your business understand the impacts of complex regulatory requirements, determine which regulations apply to your facility, and avoid unnecessary costs and delays by maintaining compliance with these requirements. We can also integrate your permit and regulatory requirements with your environmental management system. We have prepared installation and operating permit applications for a variety of industries for both major and minor emission sources. We have evaluated the technical and economic aspects of control technology (BACT, RACT, MACT); conducted dispersion modeling for pollutant concentrations and air toxics; and negotiated with regulators to achieve practical permit conditions for our clients. Our services also include design of emission control systems and technical support, such as emission reporting, recordkeeping systems, and compliance audits. Our flexible approach to providing services allows us to supplement and complement your internal capabilities.

 www.delisleassociatesltd.net

DeLisle Associates Ltd. was founded on the principles of industrial hygiene and occupational safety and health training in 1985. The company employs 20-30 employees annually, and is a WBO, equal opportunity employer. DeLisle performs an array of industrial hygiene services worldwide, including compliance monitoring for chemical, particulate, and radiation exposures. DeLisle has years of experience in conducting noise, ventilation, and compliance surveys, and can manage emissions monitoring programs as well as air permitting and waste stream analysis. We offer over 35 courses in the health and safety field including certification for asbestos, lead, OSHA construction, and general industry compliance. DeLisle provides quality professional services to our clients with dedication to the training of our staff, consistent documentation, and attention to detail. We believe our success is dependent upon the people we employ and our reputation for providing quality services.

The Dragun Corporation is not a typical environmental consulting firm. Our associates are not "order takers," they are problem solvers. True environmental consulting is not about completing a list of to dos; it's about understanding project objectives and using good science, engineering, and experience to achieve those objectives. We have been solving problems for the regulated community since we were founded in 1988. Our reputation of using sound science and engineering principles has gained us worldwide recognition. We have worked in nearly every state in the U.S., several provinces of Canada, Europe, and the Middle East. The findings of our work (projects, research, and publications) have been used in more than 45 different countries. In addition to our staff's wide range of experience in a variety of disciplines, most have advanced degrees (Master and Ph.D.s) and all have practical, hands-on experience. Our staff includes project managers and field personnel, so we can handle all aspects of a project.

EnviroSolutions provides the full range of environmental consulting services. We are an environmental engineering firm serving the Midwestern United States. Our personnel are widely experienced in air quality regulatory compliance, hydrogeology, geology, and environmental engineering design and construction. EnviroSolutions is experienced in providing a full range of air quality management services. These services include providing compliance audits, complex air permitting solutions for the NSR and ROP programs, BACT, T-BACT and MACT determinations, emission inventory and control strategy development, and air dispersion modeling. We have also managed comprehensive emission reporting and compliance certification programs for several clients since the initiation of the electronic reporting system (MAERS). In the event stack sampling, industrial hygiene, laboratory analytical work is required, these services are subcontracted through EnviroSolutions. EnviroSolutions prides itself on working with clients to cost effectively achieve sound environmental objectives without losing sight of the clients' primary business focus. We have proven this to numerous industrial, commercial, and municipal clientele.

H & H Monitoring, Inc. (HHMI) is a Michigan-based firm with full service emissions testing capability. Our emissions testing professionals are committed to providing the highest quality emissions testing services available today. Because of our specialized approach in focusing only on the emissions testing issues of today, we are able to provide these services at competitive prices. Our resources allow us to provide the required services to address your testing needs. Our experience includes provision of testing to meet the requirements of the U.S. EPA's Part 75 for utilities and industrial boilers, hazardous organic NESHAP (HON) for the chemical industry, and VOC capture and destruction efficiency for the automotive industry, as well as their Tier I and Tier II suppliers. Each of our testing projects are engineered under the owners' direction, with experience of more than 28 years in the emissions testing field. We have successfully designed testing programs ranging from particulate emissions studies to complex, full spectrum odor emissions studies.

Created in 1988, MEC Environmental Consulting is a small business providing environmental, health, and safety compliance services. Serving exclusively the private sector, the firm specializes in regulatory compliance, including strategies for manufacturing facilities to minimize the impact of complying with many of today's complex environmental regulations. MEC can explain in plain English your responsibilities under the Michigan air use rules and MIOSHA air contaminant requirements, as well as other state and federal regulations. We are experts in compliance audits, exemption reviews, and employee exposure assessments; planning; emissions inventories; permit application preparation; permit negotiation; consultant/contractor management; and temporary staffing. MEC can also help you complete and submit your annual Michigan Air Emissions Reporting System (MAERS) report, as well as assist you in complying with your Renewable Operating Permit (ROP) by preparing Deviation Reports and conducting inspections to support your report certifications. Thank you for considering us!

Weston Solutions, Inc. (WESTON) delivers integrated, sustainable solutions for environmental restoration, property redevelopment, design/build construction, green buildings and clean energy. Dedicated to making a difference in the world, the company's 1,800 people reach out from 60 offices around the globe to build strong stakeholder relations and produce solutions that work. WESTON has been responding to our clients' toughest problems for more than 50 years. WESTON's Integrated Air Services provides consulting and response services related to the assessment, monitoring and improvement of indoor or ambient (outdoor) air quality, and industrial air emissions. Our solutions for your indoor and ambient air quality challenges include planning, assessment, design, restoration, installation, and operation of emissions testing and pollution control systems and equipment on industrial air discharge stacks and equipment.
