Air Quality and the Nonmetallic Mineral Crushing Industry

The nonmetallic mineral crushing industry, especially in regard to portable crushing, is one with specific requirements that are sometimes slightly different than that of a typical stationary source. There are notifications that must be submitted for certain activities. This Webinar will focus on the specific rules that apply to this industry and some of the challenges that industry and regulators face. If you are a nonmetallic mineral crusher, portable or stationary, or if you are interested in an AQD inspector's perspective on the challenges, this Webinar will be interesting for you.

What is MAERS and what is the data used for?

Michigan Air Pollution Control Rule R336.202 (Rule 2) requires an annual report from many commercial, industrial, or governmental sources of air contaminants. In Michigan facilities submit their emissions calculations through the Michigan Air Emissions Reporting System (MAERS). Maybe you know about MAERS, but have you ever wondered where that data goes and what it is used for? This webinar will give you a good idea of what happens after you click the submit button.

Air Dispersion Modeling: What the heck is it?

Sometimes a permit contains an emission limit for a specific air toxic, such as formaldehyde. Have you ever wondered why this happens? There are AQD staff members that specialize in air dispersion modeling. Air dispersion modeling is a tool for predicting source impacts through computer simulations. Use of air dispersion modeling is sometimes required to demonstrate compliance with various state and federal ambient air quality standards. If you have ever wondered how this process works or why AQD implements it, then you will be interested in this webinar.
