

**Remediation and Redevelopment Division
Michigan Department of Environmental Quality**

The Sampling Strategies and Statistics Training Materials (S3TM) Statistical Software will no longer be available beginning January 29, 2010. In the interest of cost savings and security issues the server hosting this application is being decommissioned; the S3TM software is not being migrated to another server due to the costs of rewriting the application. The S3Tm software provides all of the statistical methods presented in the Part 201 Statistics Training Materials. An alternate software statistical package is available from the U.S. EPA and is called ProUCL version 4.0. The software can be downloaded from <http://www.epa.gov/esd/tsc/software.htm>. Users may also use other alternate statistical software. Please note that the principles found in the [S3TM - Sampling Strategies and Statistics Training Materials for Part 201 Cleanup Criteria](#) are still applicable, regardless of the statistical package used.

For information please contact:
Ms. Christine Flaga, Chief
Toxicology Unit
Remediation and Redevelopment Division,
