Detroit Institute of Arts

The Michigan Green Chemistry Conference

Friday, September 25, 2009 | 8 am-5 pm

Fort Shelby/Detroit Downtown DoubleTree

MICHIGAN GREEN CHEMISTRY AWARDS BANQUET AND CONFERENCE

SPONSORSHIP OPPORTUNITIES

Michigan Green Chemistry Governor's Awards Banquet

On behalf of the Governor of the State of Michigan, the Green Chemistry Roundtable will recognize and celebrate cutting edge technology and business advances in Green Chemistry with the first annual Green Chemistry Awards. The awards are open to individuals or organizations in Michigan. Award categories include business, academic, education, public, and student, and applications are being accepted until July 15, 2009. Green Chemistry award recipients will be honored at a banquet on Thursday, September 24, 2009, at the Detroit Institute of Arts.

Michigan Green Chemistry Conference

The first annual Michigan Green Chemistry Conference will transform knowledge into action and action into results. Leading experts in the field of business technology, chemistry, engineering, and business process improvement will inspire and inform as Michigan business leaders construct an infrastructure for advancing and sustaining green products and processes.

This results-oriented conference will be highly interactive, providing a multi-level knowledge approach to green chemistry and product and process design. Participants will receive fact-based informative strategies, tactics, tools, and resources and develop a first level action plan to incorporate knowledge gained into their business model.

You can invest in Michigan's future by sponsoring and attending this event. By doing so, you will share the floor with key stakeholders who are committed to moving Green Chemistry forward to benefit Michigan's economy, environment, and overall health.

Green Chemistry?

Green chemistry is the design of chemical products and processes that reduce or eliminate the use or generation of hazardous substances. It is the cornerstone of state policy in Michigan directed toward the use of safer, less toxic, or non-toxic chemical alternatives. This new directive, "Promotion of Green Chemistry for Sustainable Economic Development and Protection of Public Health," is overseen by the Michigan Green Chemistry Roundtable. The Roundtable is comprised of experts representing business, academia and economic and environmental interests groups.
