MEMORANDUM TO THE NATURAL RESOURCES COMMISSION

Subject: Fisheries Order 206.15A  
Special Fishing Regulations for Warmwater Species on Select Waters  
FOR INFORMATION ONLY

Authority:

The Natural Resources and Environmental Protection Act, 1994 PA 451, authorizes the Director and the Commission to issue orders to regulate the taking of fish in the waters of this state.

Discussion and Background:

This Order covers special fishing regulations for warmwater species on select waters. Eleven new waters are recommended to be added to the Order. One water reference is proposed for removal from the waters list as a clarification because the pond is no longer present.

The following changes are proposed:

A modification to the minimum size limit for Walleye on Lake Gogebic in Gogebic County to allow the possession of two (2) Walleye from 13 - 15 inches as part of the daily possession limit of five (5) Walleye. Lake Gogebic is described as having a strong naturally reproducing population of Walleye with a limited forage base. As a result, survey information indicates that Walleye are slow growing and there is a preponderance of Walleye that are 1 – 2 inches shorter than the 15 inch minimum size limit. Anglers report catching many Walleye in Lake Gogebic, but report that only a few reach the minimum size limit of 15 inches or larger. Therefore, reducing the minimum size limit to allow anglers keep two (2) Walleye from 13 – 15 inches will allow them to harvest fish for a meal plus remove some fish from the slow growing population. This change is recommended for immediate effect, which will result in all the following regulation proposals being enacted immediately as well.

A modification to the minimum size limit for muskellunge in the Tahquamenon River and Tributaries (upstream from Upper Falls) in Luce County from 42 inches to a 38 inch minimum size limit regulation on Muskellunge. Recent survey information indicates that Muskellunge are very abundant and growing well below the state average. As a result, very few Muskellunge attain 42 inches (the current legal minimum size limit). Therefore, anglers have requested that the minimum size limit regulation be reduced to allow for some level of harvest. This will increase angler harvest opportunities and should benefit the Muskellunge population in the Tahquamenon River and Tributaries.

Add Sand Lake (Montcalm County) to list of waters with a 24 inch – 34 inch protective slot limit and a daily possession limit of two Northern Pike. Anglers have reported that the Northern Pike population size structure was better in Sand Lake when the minimum size limit was 20 inches, prior to enacting the statewide 24 inch minimum size limit. Under the historic 20 inch minimum size limit, the lake produced larger Northern Pike up to 30 inches according to a 1990 fish community survey. Therefore, anglers are

supportive of moving to the protective slot limit in Sand Lake. Anglers will be able to harvest Northern Pike below 24 inches and those greater than 34 inches.

Add Lake Lavine (Branch County) to remove the minimum size limit and daily possession limit on Northern Pike. Unlawful stocking of Northern Pike has negatively impacted a popular trout fishing destination. Therefore, it is believed that liberalizing these regulations on Northern Pike will result in an increase of angler harvest thus reducing the Northern Pike population.

Add Paradise (Carp) Lake (Cheboygan/Emmet Counties) to list of waters where up to five Northern Pike may be retained in daily possession limit with only one allowed greater than 24 inches. Anglers have reported that fishing is very poor in Paradise Lake. Small Northern Pike are very abundant and comprise the greatest portion of the catch there.

Add Pickerel Lake, Kimball Lake, Emerald Lake, and Sylvan Lake (Newaygo County) to list of waters where up to five Northern Pike may be retained in daily possession limit with only one allowed greater than 24 inches. Northern Pike have slower growth rates on these waters and very few reach the 24 inch minimum size limit. Changing the size limit will enable anglers to harvest Northern Pike on these waters.

Add Susan Lake (Charlevoix County) to list of waters where up to five Northern Pike may be retained in daily possession limit with only one allowed greater than 24 inches. Susan Lake has a very abundant and slow growing Northern Pike population. This change will allow anglers to harvest some of the Northern Pike.

Add Orchard Lake (Presque Isle County) to list of waters where up to five Northern Pike may be retained in daily possession limit with only one allowed greater than 24 inches. Orchard Lake is the only lake within the Ocqueoc River watershed which does not have this regulation in effect. Adding Orchard Lake will simplify regulations thus reducing angler confusion.

Remove Brown Bridge Pond (Grand Traverse County) from list of waters where up to five Northern Pike may be retained in daily possession limit with only one allowed greater than 24 inches. The dam has been removed and the pond is no longer present. Removal will result in clarifying the regulations there and getting rid of an exception will simplify regulations.

Removing the reference to the combined possession limit language on Northern Pike waters where up to five Northern Pike may be retained as the daily possession limit with only one greater than 24 inches. The combined possession limit provision for Largemouth Bass, Smallmouth Bass, Flathead Catfish, Northern Pike, and Walleye is listed in FO-215, which is being changed to remove the combination requirement. Therefore, each species will be regulated separately in this Order and align with FO-215.

#### *Issue Pros and Cons*

The waters and regulations proposed for addition to the Order will all result in an expansion to angler opportunities. All of the proposed changes represent liberalizations from the current statewide regulation. The protected slot limit recommended for Sand Lake is less restrictive than the current 24 inch minimum size limit regulation, but may help improve Northern Pike size structure with added protection of 24 – 34” Northern Pike. As a result of the increased angling opportunities presented above there is no con identified.

*Neighboring States*

Placing special fishing regulations to protect and enhance fisheries is a widely accepted practice. Fishery managers utilize special regulations as a means to restrict or expand different angling opportunities. Anglers are very supportive of added protection as well as more liberalized fishing regulations when the science is presented.

*Biological*

Each proposed regulation change is biologically based. Special regulations are a tool that fishery managers may use in an effort to improve a fish community. In the right situation, special regulations can help develop high quality fisheries. Special regulations are also used by managers to allow harvest of fish that may not grow large enough to attain the legal size on some waters where growth is limited or inhibited by some degree.

*Social*

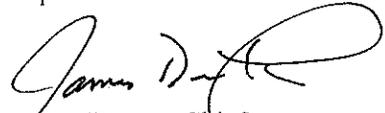

Some Muskellunge anglers may be concerned with the potential increase in harvest on the Tahquamenon River and Tributaries. Some anglers may not want the more restrictive regulations on Northern Pike to be removed.

*Economic*

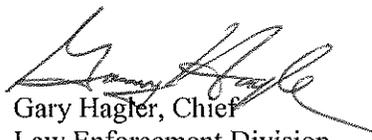

The Department does not expect the proposed changes to have any significant budgetary or personnel implications.

Recommendation:

This order is being submitted for information and consideration. This item appears on the Department's September 2015 calendar and may be eligible for approval on October 8, 2015.
