MEMORANDUM TO THE DIRECTOR

Information: Natural Resources Commission
Subject: Spearing Regulations - Statewide (FO-219)
FOR INFORMATION ONLY

Authority

The Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, authorizes the Director to provide for better protection and preservation of fish, game and birds.

Discussion and Background

Fisheries Order 219 governs spearing regulations statewide for anglers who harvest fish with spear or bow. This Order sets the regulations for gear, seasons, species, and waters open to spearing activity. We are recommending significant changes to this Order based upon a lengthy review of our spearing regulations. The recommended changes simplify spearing regulations and increase the diversity of fishing opportunities while maintaining effective protection to the resource.

In 2007, Fisheries Division established an internal spearing workgroup to formulate a strategy for modifying statute to simplify spearing regulations. After the formation of the workgroup, an opportunity arose to revise statute and move the authority for spearing regulations from the Legislature to the Department. In October of 2008, the Department was granted authority for establishing and modifying spearing regulations through the issuance of a Fisheries Order. This was a significant change as spearing regulations had been set in statute for more than 50 years. Because the Department had limited authority to modify spearing regulations, what resulted was a complicated set of regulations that was difficult to manage and convey to the fishing public. With the passage of Act 291 of 2008, the Division can now move forward with wholesale changes to spearing regulations.

The spearing workgroup met on several occasions to review spearing regulations and to identify ways to simplify regulations. Each fisheries management unit was charged with reviewing spearing regulations in their waters and to recommend any changes. Informational surveys were developed and discussed at two statewide biologist conferences where breakout sessions were conducted and regulation proposals were drafted. As a result, a draft regulation package was prepared for review by the Coolwater Regulations Advisory Committee (now renamed as the Warmwater Resources Advisory Committee). This is a Fisheries Division based committee with invited stakeholder representation that provides advice and recommendations to the Division regarding regulations such as FO-219.

Over the past year, staff from Fisheries Division, have met several times with this committee to develop a proposal to improve spearing regulations.

Proposed changes to spearing regulations include:

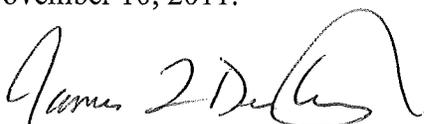

- Expanding the season for spearing opportunities on many waters;
- Expanding the waters where spearing opportunities exist;
- Expanding the type of gear that can be used;
- Expanding the list of species available for harvest to include gizzard shad, goldfish, and grass carp;
- Consolidate spearing provisions listed in FO-220 (special Regulations for Muskellunge and Northern Pike with this Order;
- Elimination of spearing in some waters due to management changes; and
- Elimination of many restrictions and exceptions.

Prior to 2010, many Fisheries Orders contained regulations or references to spearing. As part of the simplification process, several of these Orders were rescinded and/or incorporated into other Orders, reducing the number of Orders dealing with spearing from seven to two. This is the final phase of the process as spearing regulations listed in FO-220 are being recommended for consolidation into this Order. Thus, FO-219 will rescind FO-220. As a result, all spearing regulations will be contained in this Order, except for the provision allowing lake sturgeon to be speared as listed in FO-240.

Recommendation

It is our recommendation that changes to spearing regulations proposed in Fisheries Order 219 that are summarized above be approved to take effect April 1, 2012. The recommended changes simplify spearing regulations, increase the diversity of spearing opportunities, and maintain the effectiveness of protection to the resource.

This Order is being submitted for information at the September and October 2011 meetings of the Natural Resources Commission. This Order will be resubmitted for action at the November 10, 2011 meeting of the Natural Resources Commission. This item appeared on the Department's September and October 2011 calendars, and will be eligible for approval on November 10, 2011.
