

Listen for frog calls

www.michigan.gov/dnr

Identify the frogs and toads (if you can)

Go out each evening and listen for frog calls. Typical early season callers are spring peeper, chorus frog, Wood frog and American toad. Record the abundance by how many you heard. Were there only a few, several with songs overlapping or a "chorus", where it is difficult to tell the beginning and end of individual calls. Keep track of the weather and temperature.

Number of different calls you heard
