

Proper Installation of CPVC Piping System for Fire Protection

The Blazemaster installation training module is the result of all the CPVC manufacturers coming together and collaborating on a training module for the installation of CPVC fire sprinkler systems.

The training is @ 3 hours which includes a PowerPoint presentation, a hands on solvent weld exercise, and a quiz. All attendees that pass the quiz will receive a certificate of completion. All Attendees will receive and Installation guide.

The training covers the following:

- Listings and approvals
- Advantages
- Design parameters
- Manufacturing standards for pipe and fittings
- Temperature and pressure ratings
- Expansion and contraction
- Hanging and supports
- Riser supports
- Storage and handling
- Concealed and exposed listings
- Proper cutting and joining
- Freeze protection
- Compatibility
- Cut in procedure
