

Course #17671 - ERV & ERU Technology and Operation Outline:

The purpose of this course is to communicate the following information:

- **Define the difference between a heat recovery unit and an energy recovery unit.**
- **Explain the various designs available for this technology.**
- **Review the energy savings provided by this technology.**
- **Review the varied efficiencies of the various concepts available.**
- **Review advantages and disadvantages of each system.**
- **Define enthalpy vs sensible heat transfer.**
- **Review code requirements and inspection techniques.**
- **Review the listing requirements for ducted and non-ducted equipment.**
- **Conduct a question and answer session.**
