

The Pierce Street Apartments in Allendale Michigan Wolverine Building Group

Partnership Signing Date: May 6, 2015

This project will consist of the new construction of 13 three-story buildings on a 15 acre site near Grand Valley State University.

Innovative Best Practices/Safety Initiatives

- 100% fall protection over 6 feet, including steel erection and roof work (the use of a Safety Monitor system is specifically prohibited in all cases).
- 100% Personal Protective Equipment (PPE) including hard hats, high visibility clothing or vests, eye protection – ANSI Z-71 rated prescription eye wear with side shields or ANSI Z-87.1 protective safety glasses with built in side shields, and appropriate work footwear.
- Pre-Task Analysis (PTA's) must be completed prior to the beginning of critical work.
 - PTA's are encouraged for each shift, but will be required before any significant, unusual, or high risk type of work activity is performed. This will assist in coordinating the efforts of subcontractors, trades people and other project personnel to ensure the common safety of all involved.
- MIOSHA Consultation Education and Training Division will conduct at least one complete job site survey per year during the course of the project. Frequency will be determined upon benefit to the project workforce. The surveys will be conducted during times when peak activity is taking place on the project. All subcontractors are encouraged to contact CET for a more individualized onsite training session for their particular needs.
