

## **Renewable Energy Tools RFP Corrections/Clarifications**

### **Michigan Urban Bioenergy & Wind Permitting Factsheets**

The Bioenergy & Wind Permitting Factsheets should address urban-based distributed generation applications. These factsheets are a first step for communities looking to adopt local codes/zoning ordinances that address bioenergy & wind systems. The expectation is that the factsheets will identify issues/questions that need to be considered as well as best practices on such applications with regards to permitting more so than developing model code.

Note: See RFP (pg. 21) for information on the Solar Permitting Guidebook.

### **PART V (pg. 27)**

1. Attachments A-1, A-2, 3, and 4 will not count towards the 20 page limit. Letters of Support and Resumes also do not count towards the page limit.
2. Applicants are not required to submit a Project Worksheet.
