

Many Michigan high school grads not ready for college, data show

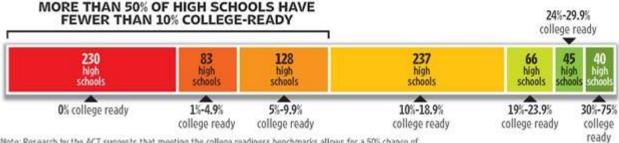

1:01 AM, Feb. 22, 2011 |

Top 15 metro high schools in college readiness

Students who score at least 18 in English, 22 in math, 21 in reading and 24 in science are considered college ready by the ACT. Here are the results of the Class of 2011.

Metro	State				Per	cent coll	ege re	ady	2010 grad

Few Michigan high school students are college ready

Note: Research by the ACT suggests that meeting the college readiness benchmarks allows for a 50% chance of obtaining a B or higher or about a 75% chance of obtaining a C or higher in college courses of the same subject area.

Sources: Michigan Department of Education, ACT

At more than half of Michigan's high schools, fewer than 10% of students graduating this spring are college ready, according to data released today that for the first time measures the extent of college readiness at every high school in the state.

The analysis by the Michigan Department of Education underscores that graduation rates are not a reflection of the quality of education kids are getting. It raises "grave concern" that students are graduating without the skills to succeed, said Martin Ackley, spokesman for the MDE.

"Where is the value of that high school diploma if the students walk out the door not knowing how to read and write or do basic math and science?" Ackley asked.

The MDE used as its yardstick rigorous standards developed by the ACT, which measures students in English, math, reading and science.

The results were dismal even for some elite schools in metro Detroit, with barely half their students considered college-ready.

The data was released at the same time the state begins raising the standards for the Michigan Merit Exam and the MEAP.

It's tough to get kids college-ready

It's consistently one of the top-ranked high schools in the nation. Now a new distinction sets the International Academy in Bloomfield Hills apart from its peers.

At the school, 73% of the students who last spring took the Michigan Merit Exam -- which includes the ACT -- were considered college-ready, the highest percentage among 823 high schools in the state.

Other high schools fared far worse, reinforcing concerns state officials have raised for years that Michigan schools are not adequately preparing students for college.

The data, released today by the Michigan Department of Education (MDE), is the first attempt to give a school-by-school analysis.

In the past, the only college-readiness data available was statewide averages on the ACT. That average has hovered around 19%.

To determine college readiness, the state used standards developed by ACT, which defines it as scoring - out of a top score of 36 -- an 18 in English, 22 in math, 21 in reading and 24 in science.

Database: See how college-ready the students at your Michigan high school are

At more than half the state's high schools, <u>fewer than 10% of the students set to graduate this spring</u> <u>were considered college-ready</u>.

<u>College readiness</u> is defined as the percentage of students that meet the following four minimum scores on the ACT: 18 on English, 22 on math, 21 on reading and 24 on science.

Search Detroit Free Press Database

Nationwide, 24% of 2010 high school graduates were considered college-ready, with a little under half of high school students taking the test. In Michigan, all public high school students take the test and about 19% met college-ready benchmarks.

Mich. high school grad rates up; many not ready for jobs, college

Analysis finds students are not proficient in basic skills

MIKE WILKINSON AND JENNIFER CHAMBERS The Detroit News

An increasing number of Michigan high schools are doing a good job graduating students — but dozens are handing out diplomas to students woefully unprepared to find a job or go to college, a state analysis of new data shows.

Although the statewide graduation rate increased this year, to 76 percent, a number of schools had large majorities of graduates who failed to reach proficiency in math, reading or science, raising questions about social promotions and the academic standards set by districts.

"My concern is that many schools have very high graduation rates and very low student proficiency rates," state school Superintendent Michael Flanagan said in a statement. "This means that students in some schools are graduating without the educational foundation needed for success in college or the workplace."

The state Education Department presented the analysis, comparing graduation rates from the class of 2010 to those students' scores on the spring 2009 Michigan Merit Exam. Even taking into account that students continue to learn up until graduation, many schools showed substantial gaps between students' merit exam proficiency and their graduation rates.

Of the 568 schools that had graduation rates higher than 80 percent, 64 schools — 11 percent — had student bodies in which fewer than 30 percent were proficient in math. Another third of those schools had proficiency rates between 30 percent and 50 percent.

"We want all students to graduate high school, but they need to graduate with a level of knowledge that will prepare them for success after high school," Flanagan said.

At Mumford High School in Detroit, for example, 89 percent of students graduated in 2010. A year earlier, however, only 6.4 percent of those students were considered proficient in math and just 10.5 percent were proficient in science. At Warren Fitzgerald, the 2010 graduation rate was 93.2 percent, while the math proficiency was only 26.9 percent. And at Southfield High School, the graduation rate was 94.1 percent, while 19.6 percent were considered math proficient.

Statewide, 49 percent of the class of 2010 was proficient in math, 60 percent in reading and 56 percent in science.

Federal and state laws require public schools to assess students at certain grade levels. The Michigan Merit Exam is given each spring to 11th-grade students, assessing them in reading and writing, math, science and social studies.

Gaps could worsen

But the results on the merit exam do not affect a student's ability to graduate. Instead, Michigan requires that students pass four credits each of math and English language arts, three credits each of science and social studies, two credits of world language, one credit each of health/physical education and visual/performing arts and one online course. Each district determines what is considered a passing grade.

Jan Ellis, a spokeswoman for Flanagan, said the analysis is part of an effort to more closely look at education data — test scores, graduation rates and demographics — and the relationships between them.

"The whole education community is looking at proficiency and return on investment and making sure that kids are college and career-ready," she said.

The gaps could get worse because state officials recently agreed to raise the benchmark levels.

Robert Bobb, emergency financial manager for Detroit Public Schools, said Monday he supports the new standards for education set by the Michigan Legislature, but he would recommend the state consider changing the testing dates for MEAP from October to spring, which he says is a better time to assess how much students have learned.

Bobb also said the changes may cause some initial slippage in test scores, but the long-term benefits will be more significant.

"We must do more to raise the level of rigor to ensure our students are prepared for college and ready to compete against students from states with higher standards," Bobb said in a statement. "DPS is implementing a much more demanding curriculum under a five-year academic plan that we believe has already begun to lay the groundwork for meeting higher testing standards."

Comparisons questioned

A number of schools in the region recorded high graduation rates and high test scores. At Rochester Adams, 99.3 percent of the students graduated and 86.8 percent were proficient in math — the highest in the region. Another 87.4 percent were proficient in reading and 82.5 percent in science.

Some schools questioned the comparisons, arguing that many students are not focused on the merit exam because it does not affect graduation.

"It's more of whether or not they need it for their future. If not, what's the incentive for them?" said Keith Wunderlich, superintendent of the New Haven Community Schools.

New Haven had an 89.9 percent graduation rate, but just 16.9 percent of students were proficient in math and 28.9 percent were proficient in science.

Wunderlich said the predicament is frustrating for administrators but isn't necessarily an indication of how well a student is doing in high school.

Students planning to go to a four-year university may make more of an effort on the ACT or the merit exam than students who may not have plans for college or have elected to go to a community college, where it isn't necessary, he said.
