

THE STEM ACADEMY INCREASES THE NUMBER OF SCHOOLS

Featuring best of breed STEM Programming by over 350%

You and I want our lives to matter.
We want our lives to make a real
difference. We know that there is no
satisfaction in merely going through
the motions. We want to know we
have made some impact on the world.
In fact, you and I want to contribute to
the quality of life. We want to make
the world a better place.

Werner Erhard

Schools all across America are realizing
best of breed STEM curriculum offered by
The STEM Academy. The number of schools
offering STEM 101 courses has increased
by over 350% year over year.

The practices, strategies and programming
utilized within The STEM Academy (K-16
Program) were developed from identified
national best practices by the National
Academy of Engineering and National
Science Foundation. The programming
is recognized as a national next
generation, high-impact academic
model by numerous third party
organizations. Curriculum features
dual-credit agreements with over
180+ post-secondary institutions.
Instructors may earn up to 9 graduate
school credits through the STEM 101
professional development program.

As the leading national non-profit
organization dedicated to improving
STEM literacy for all students, The STEM
Academy is committed to advancing a full
generation of learners to fill critical voids
in national STEM career field projections.

Russell Mickelson, CEO, "The economic
future of America will be directly connected
to our success in advancing STEM education
opportunities for all students. There are
those who believe in maintaining the status
quo and continue to limit STEM education
experiences to the top 10% of students.
This practice and precedent will not allow
us to realize our full potential. America's
diversity is one of our greatest assets.
When we commit to improving STEM
literacy for all students we will realize
our innovative capacity".
