

A light of hope for those

worried about lung cancer

See how the new lung cancer screening could give you a brighter future.

If you are a current or former heavy smoker between the ages of 55 and 80, chances are you've wondered if you could have lung cancer. It's important to know, because the earlier you find out, the greater the chance for effective treatment. Now there is an easy and painless lung cancer screening available. Talk to your healthcare provider about the pros and cons of lung cancer screening, and let us light the way to answers at [**michigan.gov/cancer**](https://michigan.gov/cancer).
