Influenza Surveillance Updates
Bureaus of Epidemiology and Laboratories

Editor: Jalyn Ingalls, MA IngallsJ@michigan.gov April 24, 2017 Vol. 14; No. 28

Influenza Surveillance Report for the Week Ending April 15, 2017

Michigan's Influenza Activity Level:
Regional

Updates of Interest: National Infant Immunization Week, April 22-29, is an annual observance to highlight the importance of protecting infants from vaccine-preventable diseases, and celebrate immunization programs promoting healthy communities.

Sentinel Provider Surveillance
The proportion of visits due to influenza-like illness (ILI) decreased to 1.7% overall, which is below the regional baseline of 1.9%. A total of 193 patient visits due to ILI were reported out of 11,302 office visits. Please note: These rates may change as additional reports are received.

Number of Reports by Region (32 total):
- C (11)
- N (3)
- SE (13)
- SW (5)

National Surveillance: In the United States, 2.0% of outpatient visits were due to influenza-like illness, which is below the national baseline of 2.2%.

Become a Sentinel Provider!
As part of pandemic influenza surveillance, CDC and MDHHS highly encourage year-round participation from all sentinel providers. New practices are encouraged to join the sentinel surveillance program today! Contact Jalyn Ingalls (IngallsJ@michigan.gov) for more information.

Additional information is in the weekly FluView reports available at: www.cdc.gov/flu/weekly.
Hospital Surveillance
The CDC Influenza Hospitalization Surveillance Project provides population-based rates of hospitalization due to severe influenza-related illness through active surveillance and chart review of lab-confirmed cases from Oct. 1, 2016 until Apr. 30, 2017, for Clinton, Eaton, Genesee, and Ingham counties. Since Oct. 1, there have been 66 pediatric and 564 adult influenza-related hospitalizations reported in the catchment area for the 2016-2017 season. Note: Cumulative totals may change from week to week as cases are reviewed to determine if they meet the case definition.

The MDHHS Influenza Sentinel Hospital Network monitors influenza-related admissions reported voluntarily by hospitals statewide, with 12 facilities (N, C, SE, SW) reporting during this time period. Results for the 2016-17 flu season are listed in the table below. Additional hospitals are encouraged to join; please contact Seth Eckel at eckels1@michigan.gov.

Influenza-associated Pediatric Mortality
No (0) influenza-associated pediatric deaths were reported to MDHHS for the week ending April 15, 2017. A total of 4 influenza-associated pediatric deaths in Michigan have been reported thus far for the 2016-17 season. Three of the children tested positive for Influenza B, and one tested positive for Influenza A/H3. Nationally, 77 influenza-associated pediatric deaths have been reported thus far for the 2016-17 flu season.

Laboratory Surveillance
MDHHS Bureau of Laboratories reported 36 new positive influenza results (11 A/H3 and 25 flu B) during this time period. A total of 591 positive influenza results have been reported for the 2016-17 season. Influenza results for the 2016-17 season are in the table below.

In addition, 10 sentinel clinical labs (2SE, 2SW, 6C, 0N) reported influenza testing results. All ten (10) labs reported influenza A activity with most sites now in the low range and with none showing increases. All labs reported ongoing influenza B activity, with multiple sites still at elevated levels but all continuing a downward trend. Influenza B continues to predominate at nearly all sites. Three (3) labs (SE, SW, C) reported low Parainfluenza activity. Seven (7) labs (SE, SW, C) reported RSV activity with most now at low or stable levels. Four labs (SE, SW, C) reported low or sporadic Adenovirus activity. Five labs (SE, SW, C) reported low to slightly elevated hMPV activity. Overall testing volumes have dropped further with most sites now down to the moderate range.
Congregate Setting Outbreaks of Viral Respiratory Illness
There were 4 new respiratory facility outbreaks (1C, 1SE, 2SW) reported to MDHHS during this time period, all of which were confirmed influenza. Respiratory facility outbreaks for the 2016-2017 season are listed in the table below.

Michigan Disease Surveillance System
MDSS influenza data indicated that compared to levels from the previous week, aggregate reports had increased while individual reports had decreased. Aggregate reports are lower than levels seen during the same time period last year, while individual reports are higher.

Emergency Department Surveillance
Compared to levels from the week prior, emergency department visits from constitutional and respiratory complaints had both decreased. Levels of constitutional and respiratory complaints were both higher than those recorded during the same time period last year.

- 5 constitutional alerts (1N, 3C, 1SW)
- 5 respiratory alerts (2N, 3C)
- Last MIFF report: 1 constitutional alerts (SW), No respiratory alerts reported
