Michigan Disease Surveillance System
MDSS influenza data indicated that compared to levels from the previous week, aggregate reports had decreased, while individual reports had increased. Aggregate reports were lower than levels seen during the same time period last year, while individual reports were higher.

Emergency Department Surveillance
Compared to levels from the week prior, emergency department visits from constitutional and respiratory complaints had both increased. Levels of constitutional complaints were higher than those recorded during the same time period last year, while respiratory complaints were similar.
- 9 constitutional alerts (2SW, 4C, 3N)
- 1 respiratory alert (1SW)
- Last MIFF report: 7 constitutional alerts (1SW, 4C, 2N), 4 respiratory alerts (1SW, 3N)

Sentinel Provider Surveillance
The proportion of visits due to influenza-like illness (ILI) increased to 2.7% overall; this is above the regional baseline (1.9%). A total of 298 patient visits due to ILI were reported out of 11,090 office visits. Please note: These rates may change as additional reports are received.

Number of Reports by Region (34 total):
- C (14)
- N (4)
- SE (12)
- SW (4)

Become a Sentinel Provider!
As part of pandemic influenza surveillance, CDC and MDHHS highly encourage year-round participation from all sentinel providers. New practices are encouraged to join the sentinel surveillance program today! Contact Stefanie Cole (ColeS4@michigan.gov) for more information.

**Hospital Surveillance**

The CDC Influenza Hospitalization Surveillance Project provides population-based rates of hospitalization due to severe influenza illness through active surveillance and chart review of lab-confirmed cases beginning on Oct. 1, 2015, for Clinton, Eaton, Genesee, and Ingham counties. Since Oct. 1, there have been 7 pediatric (3.7 per 100,000 population) and 17 adult (2.5 per 100,000 population) hospitalizations reported within the catchment area. **Note:** Some hospitalizations are ruled out after they are reported so the cumulative totals may change from week to week.

The MDHHS Influenza Sentinel Hospital Network monitors influenza hospitalizations reported voluntarily by hospitals statewide, and 12 hospitals (N, SE, & SW) reported. Results for the 2015-16 flu season are listed in the table below. Additional hospitals are welcome to join; please contact Seth Eckel at eckels1@michigan.gov.

**Laboratory Surveillance**

MDHHS Bureau of Laboratories reported 1 adenovirus and 21 new positive influenza results: 19 2009 A/H1N1pdm, 1 influenza B, and 1 influenza A/H3. A total of 146 positive influenza results have been reported for the 2015-16 season. Influenza results for the 2015-16 season are in the table below.

*Specimens antigenically characterized by CDC; **A/California/07/2009-like (H1N1)pdm09 is the H1N1 component of the 2015-16 Northern Hemisphere flu vaccines; †A/Switzerland/9715293/2013-like (H3N2) is the H3N2 component of the 2015-16 Northern Hemisphere flu vaccines; ††B/Phuket/3073/2013-like virus is the B/Yamagata component of the 2015-16 Northern Hemisphere trivalent and quadrivalent flu vaccines.

In addition, 12 sentinel clinical labs (4SE,2SW,5C,1N) reported influenza results. All 12 labs (SE,SW,C,N) reported influenza A with nearly all sites showing notable increases and especially marked increases in the SE region. Nine labs (SE,SW,C,N) reported sporadic to gradually increasing influenza B activity. Four labs (SE,SW,C) reported sporadic to low Parainfluenza activity. Ten labs (SE,SW,C,N) reported low to moderate RSV activity at steady or increasing levels. Five labs (SE,SW,C) reported low to mildly elevated Adenovirus activity. Six labs (SE,SW,C) reported hMPV activity with several sites showing moderate increases. Nearly all testing volumes showed further increases with most sites continuing in the moderate to high range.
Influenza Congregate Settings Outbreaks
There were 3 new respiratory facility outbreaks (2 influenza A, 1 no testing done) reported. There have been a total of 11 respiratory facility outbreaks reported to MDHHS for the 2015-16 season. Respiratory facility outbreaks are listed in the table below by facility type and surveillance region.

Influenza-associated Pediatric Mortality
No new influenza-associated pediatric deaths were reported to MDHHS. One influenza-associated pediatric death (SE) has been reported to MDHHS for the 2015-16 season.

National: In the United States, flu activity increased with 3.2% of outpatient visits due to influenza-like illness, which was above the national baseline of 2.1%. All 10 regions reported ILI at or above region-specific baselines. One new influenza-associated pediatric death was reported, for a total of 14 pediatric deaths for the 2015-16 flu season. Additional information is in the weekly FluView reports available at: www.cdc.gov/flu/weekly/.

International: Globally, flu activity continued to increase in the Northern Hemisphere. High levels of flu activity were reported in some countries in Europe. In North America, northern Africa, central and western Asia, increasing activity predominantly of influenza A(H1N1)pdm09 was observed. In temperate countries of northern Asia, activity was ongoing with various proportions of circulating viruses. More information is available at: www.who.int/influenza/surveillance_monitoring/updates/latest_update_GIP_surveillance/en/.
2015-16 FLU VACCINE EFFECTIVENESS
The Advisory Committee on Immunization Practices (ACIP) met on Feb. 24 to discuss influenza. CDC presented interim flu vaccine effectiveness (VE) estimates for 2015-16. A summary can be found here. CDC also issued a press release regarding the VE estimates.

Overall, the 2015-16 flu vaccines were found to be 59% effective at reducing the risk of having to go to the doctor because of flu. VE against H1N1 was 51%, VE against all flu B viruses was 76%, and VE against B/Yamagata viruses was 79%. Because of low numbers of flu cases through the early part of this season, there were not enough data to estimate VE by age group, by vaccine, or against H3N2 or B/Victoria viruses.

ACIP also voted to amend the flu vaccine recommendations for egg-allergic patients for 2016-2017.

MI IMMUNIZATION TIMELY TIPS NEWSLETTER
The February issue of the Michigan Immunization Timely Tips (MITT) newsletter is now posted online. This issue contains information on flu, 2016 Fall Immunization Conferences, adult vaccines, and more!

WHO RECOMMENDS 2016-17 FLU STRAINS
This week, the World Health Organization (WHO) met to recommend the flu virus strains to be included in the 2016-17 Northern Hemisphere flu vaccines. WHO recommended the following strains:
- A/California/7/2009 (H1N1)pdm09-like virus;
- A/Hong Kong/4801/2014 (H3N2)-like virus;
- B/Brisbane/60/2008-like virus
- B/Phuket/3073/2013-like virus [quadrivalent].

This represents a new H3N2 strain from 2015-16, and the B viruses from 2015-16 have been swapped between trivalent and quadrivalent vaccines.
