Hot Mix Asphalt (HMA) Paving

This construction advisory serves as reminder for paving beyond seasonal limitations.

The end of the HMA paving season is upon us. Adhere to seasonal limitations according to the applicable standard specifications and contract documents, unless a contract authorization is issued to allow the contractor to pave. A contract authorization is required when there is a change in contract conditions. The authorization must document and state under what conditions the contractor may pave, and the contractor must meet these conditions each day they pave. All other specification requirements, including weather, temperature and compaction, remain in place. See Section 502.03J and Table 502-1 of the standard specifications.

Please share this information with MDOT project staff and consultants performing construction engineering.
