Stenciling of all new trusses and/or cantilevers upon erection of the new structure(s) is a requirement for all projects that include the installation of new overhead signing structures. Stencils will be placed per FUSP 12SP810(Q), Truss and Cantilever Sign Structure Stenciling.

During the plan development process, the designer must contact MDOT Operations Field Services at 517-322-3319 to obtain the structure number(s). This information must be included in the plans specified in the proposed Structure Detail Sheet and/or Proposed Signing Plan Sheets.

The designer must also complete MDOT Form 0467, "OPERATIONS FIELD SERVICES CANTILEVER and TRUSS INSTALLATION or REMOVAL", once the structure number(s) have been obtained. Email the completed form to the MDOT Overhead Sign Shop at MDOT-Signs@michigan.gov.

The process changes included in this advisory are effective for all projects with letting dates starting in October, 2014.
