

Pavement Condition Analysis-Statewide Public Use Airports REQ 1192

QA 3

4/29/2013

Q1: The Location scoring criteria appear to be based on how this project is classified. In the Selection Guidelines for Service Contracts document (section 3.2.2, paragraph 4), if the project is for “field related projects, on-site inspection, or survey activities” then distance criteria is used to score, otherwise percent of work performed in Michigan becomes the criteria. Please clarify if the Location criteria will be based on distance, percent of work performed in Michigan, or a combination of these two.

A1: **Location scoring will be based on a combination of both the percentage of work performed in Michigan and distance.**
