

As-Needed Geotechnical Services-University Region QA1
Requisition #856
2/23/2012

Q: In the past for the As-needed contract, has a preference given to a consultant using their own drilling equipment?

A: No. For University Region As-needed contracts, it has not been a factor in scoring the proposals.

Q: Will you need physical testing of the cores?

A: No physical testing of HMA or concrete cores will be required.

Q: We are going to partner with a drilling firm for this proposal. In your opinion, do you think that that will help us?

A: The Prime Consultant needs to be prequalified in the primary prequalification and any sub consultants presented to do work need to be prequalified if there is a classification for the type of work that they are doing.
