

Design Services for a weigh in motion (WIM) scale system for the Mackinac Bridge  
Requisition 1268

QA 1

7/3/2013

Q: Under Consultant Responsibilities, page 3, it is mentioned the consultant will provide necessary road survey information and under item A, perform design surveys. Because we are assessing new WIM locations, survey will be required however a survey prequal is not listed. Will MDOT be providing survey for this task?

**A: A minimal amount of survey information will be needed for this project. The milepoint or stationing of the proposed WIM will need to be shown along with existing ROW and utility information. These can be determined from researching existing documents.**
