

Design Services for cold milling and two course HMA overlay-Bay and Saginaw counties QA1

Requisition 1525

5/30/2014

Q: On page 3, Letter C, the RFP states that the plans should be taken to only OEC level. Is this accurate?

A: No, the design consultant should plan on taking the design plans through OEC to final plans/advertising like a conventional project.

Q: In the Hydraulic Survey Attachment, it mentions an Attachment E however one was not provided.

A: Attachment E does not apply. Cross sections shall be taken as specified by the MDOT Hydraulics Engineer and this will be discussed in more detail with the selected consultant prior to the assembly of the priced proposal.
