

Bridge design services for 8 bridges in four counties within the Grand Region QA1
REQ#415

1. Attachments A and B define the Scope of the Hydraulic Survey for M-37 over the White River and M-11 over Plaster Creek, respectively. Can you please confirm that the consultant will only provide hydraulic analysis for M-11 as described on page 19?

Hydraulic analysis is not part this contract.

2. For Parts V and VI, we assume that PPMS Task 3510 will include the soil borings consisting of one core and a 5-foot deep hand auger on each approach. Can you please clarify if there will be additional soil borings required for structure foundation investigations on the bridge for PPMS Task 3530?

The intent of the borings is to determine voids behind the abutments. No other soil borings will be required then those already noted.
