

As Needed Design Services for various projects in the Southwest Region QA1
Requisition 865
Revised 3/5/12

Q:

In the RFP, page 4, item A, it states that the consultant will perform design pickup survey. Before we team with a survey firm, I just want to confirm this is not an oversight since design survey is not in the required prequals on page 1 of 11.

A:

Pickup survey is intended to mean field measurements measuring the length of a guardrail run or length of curb on a bridge approach) and field verification (Determining if there are ADA ramps or catch basins). A survey prequalification is not needed for this contract.
