Roadway Rehabilitation on US-24
JN 76899C

Question 1: Pump House Design is listed as a secondary prequalification classification. Could you further clarify the scope for pump house design work?

Answer 1: There is an underground pump house within the project limit. Currently, MDOT is gathering information regarding the pump house. Details of the scope for pump house design and related work will be discussed during the scope verification meeting. In addition, a drainage study is required as part of the design of this project in order to further pinpoint work needed at the pump house. Recommended work at the pump house may be designed under this contract.
