

**A Method to Assess the Use of New and Recycled Materials in Pavements QA1
Requisition 1108 OR#: 13-008**

1/16/13

Q: Request #1108 does not specify if the Department is seeking information on the use of new and recycled materials in asphalt, concrete, or both. Please clarify.

A: We would like the researcher to provide a method to evaluate new and recycled materials for use in pavements. We want it to be generic for any material. We currently use concrete and hot mix asphalt but something new could be developed.
