

Installation Instructions for “Go-Global for UNIX”

“Go-Global for Unix” is the new P/PMS interface software. This software is web browser based and it prevents the need for a computer support person to visit/install P/PMS on each machine that requires P/PMS access.

P/PMS is client-server software, meaning very little is actually installed and done on your computer. Everything is performed quickly and efficiently on the central server.

Before installation, users need to get a **username, password, and access** to the software’s database. Contact any P/PMS Team member for this **HERE**. They will notify you once this is done (should be within 24 hrs or less).

Please Note: P/PMS is best viewed at a screen resolution of 1024 x 768 or higher. Smaller resolutions may require use of a function key or quick key combination to accomplish certain functions. These combinations can be provided for you if necessary. Otherwise, change resolutions at this time before continuing.

1. Delete your current P/PMS icon.
2. Open Internet Explorer on your desktop.
3. Enter the web site <http://webxsvr1/docs/bridges.html> in the Browser’s Address field and click Enter.
[Note: This site cannot be accessed from a remote location (i.e. home) without accessing the MDOT network.]

The very first time that the above site is visited, Steps 4 and 5 will occur. Subsequent sessions should proceed from here to Step 6.

4. You should be prompted to grant permission via a Security Warning -- see Figure 1. Click on the Install button, but only provided that the request specifies GraphOn Corporation or a familiar source.

Figure 1

5. By default, Bridges will open a server selection window. See Figure 2 below.

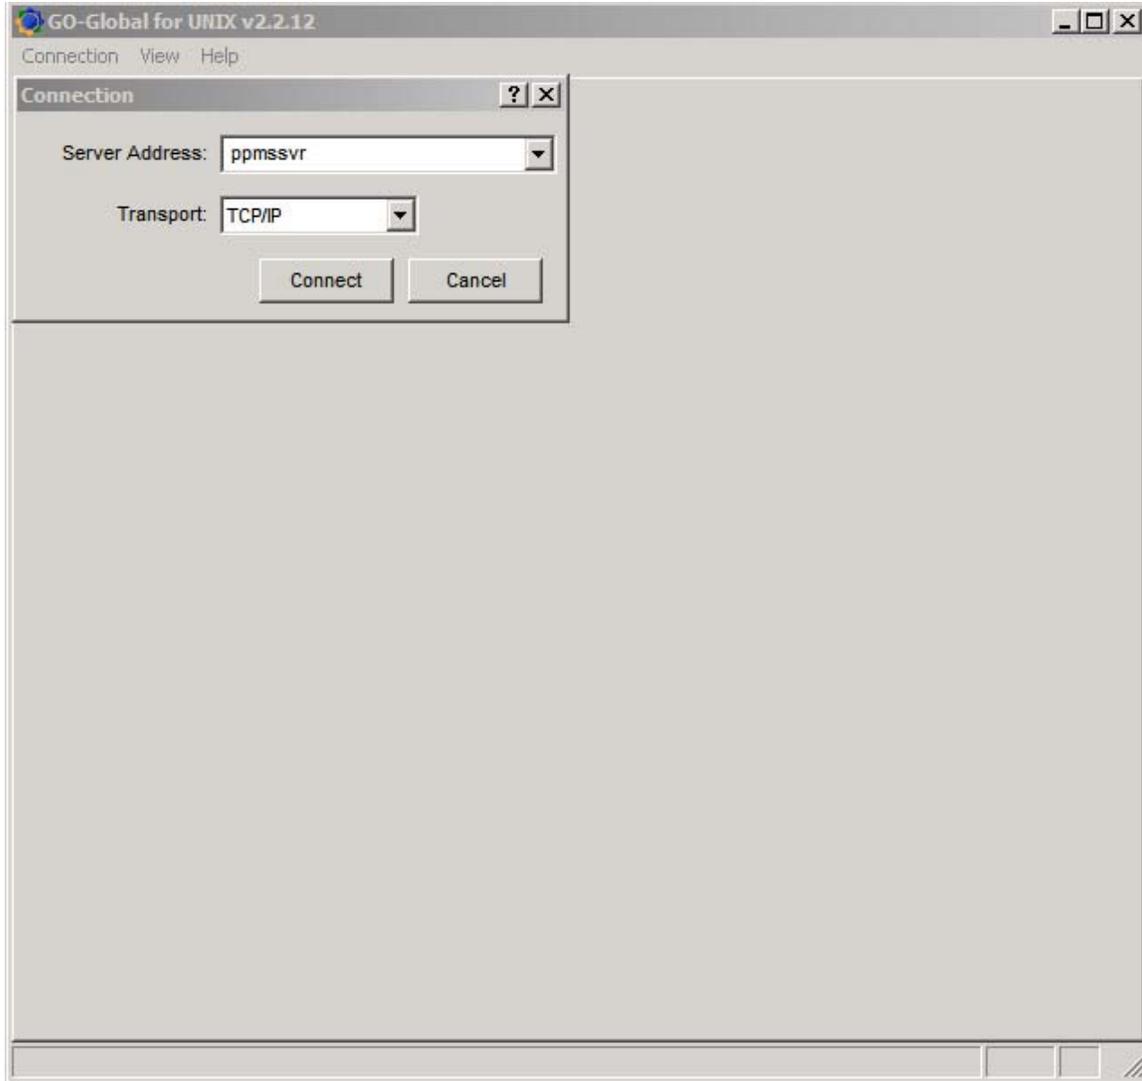

Figure 2

6. Input ppmssvr in the Server Address field and make sure transport says TCP/IP and click **Connect**. Connect will not be available until after a server has been specified in the field.
7. After you click connect the following screen will appear Figure 3. This is the screen for you to input your username and password.

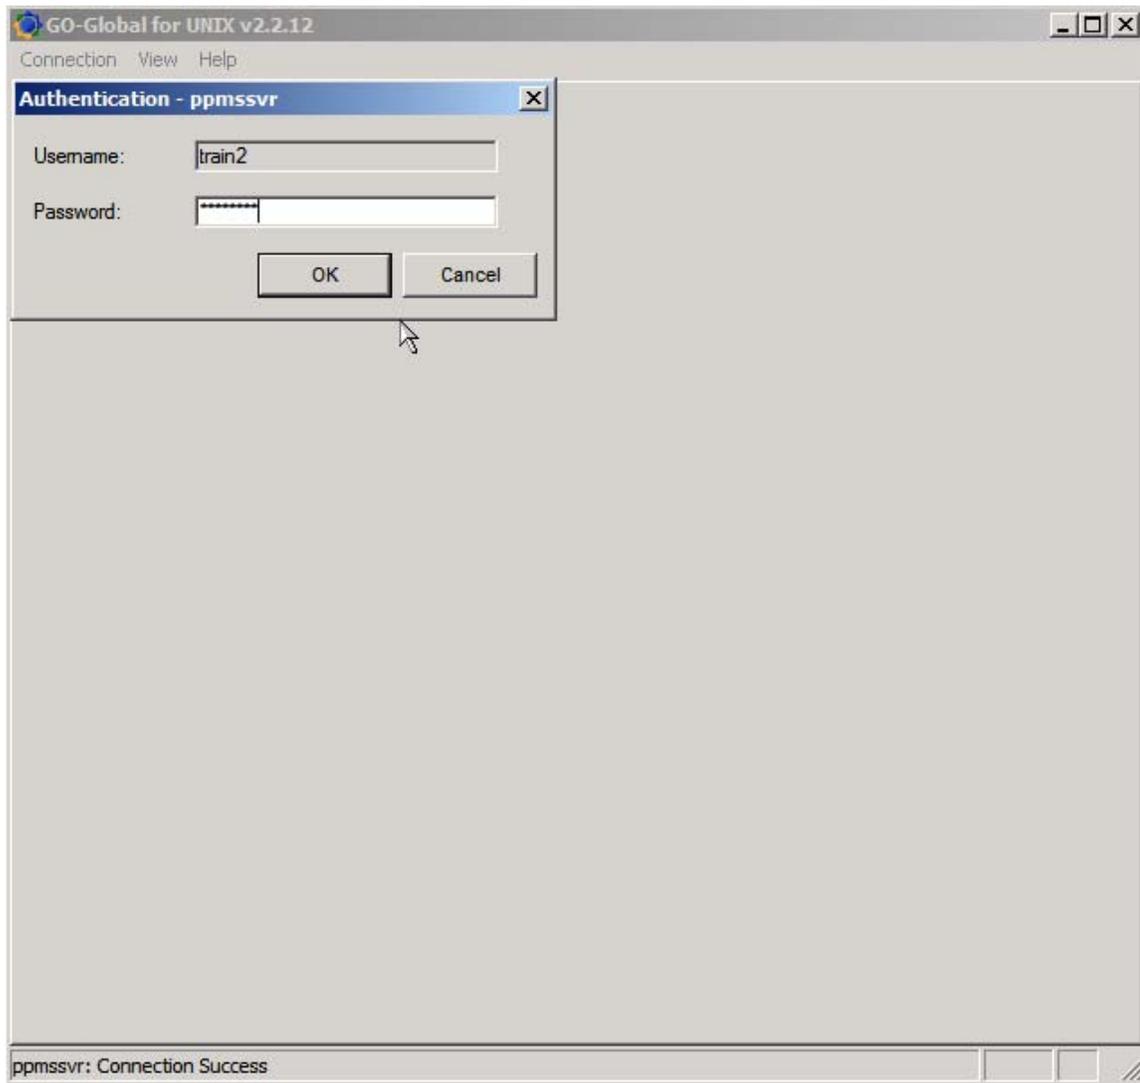

Figure 3

Your *username* is up to 8 characters – it's the first seven letters of your last name and your first initial. Examples: Dennis Kelley would have a username of kelleyd. Lenny Robinson would have a username of robinsol.

Your default *password* takes the form of 1<lastname>. Example: Dennis Kelley would have a default password of 1kelley. Lenny Robinson would have a default password of 1robinson.

Your Username and Server Address will automatically be saved. You may bookmark this location for future reference. You will see how to save your password later in this document.

8. After you correctly enter your login and password the following screen will appear Figure 4.

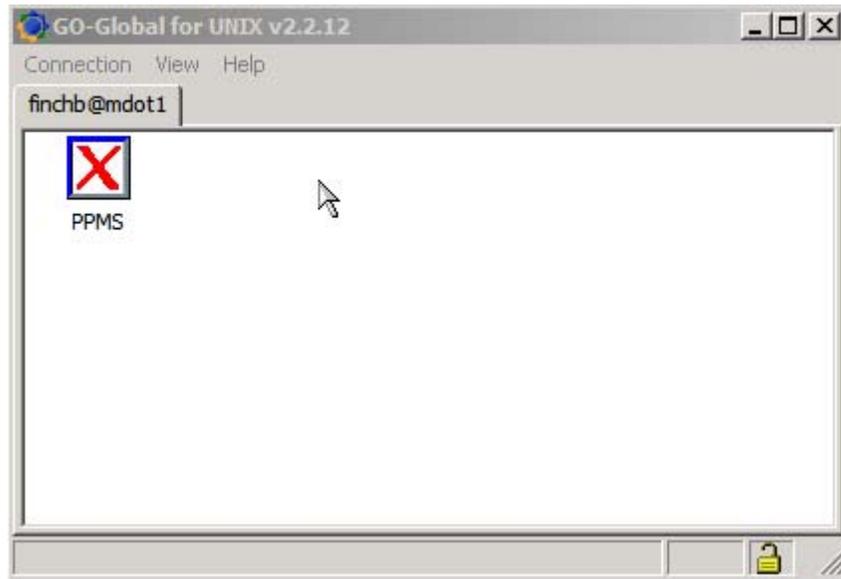

Figure 4

9. Select Connection, Preferences and the preferences screen will appear. See Figure 5.

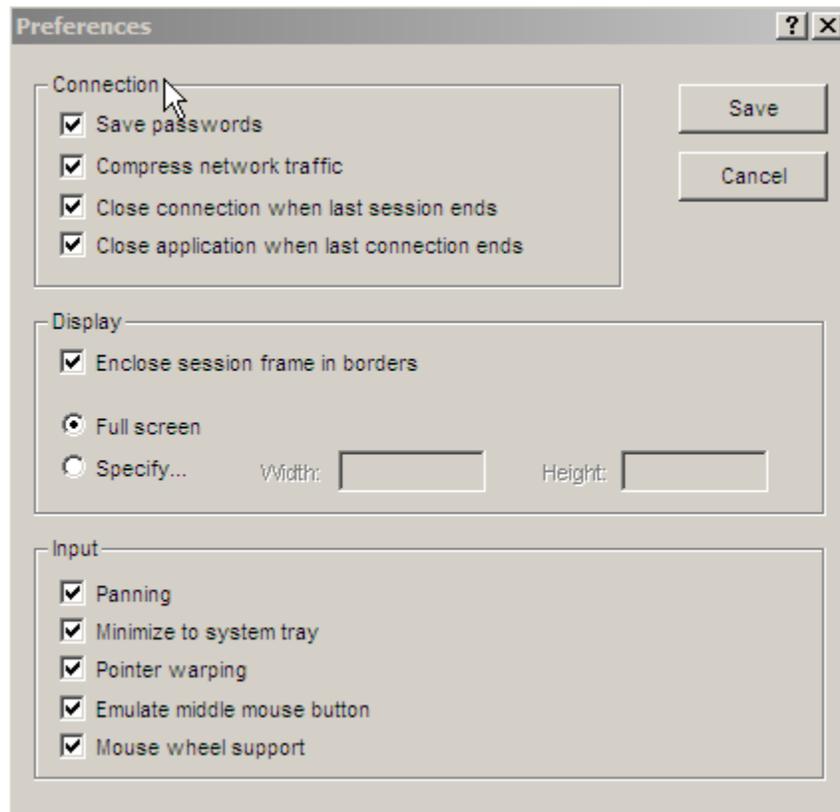

Figure 5

10. Make sure that all boxes are checked under Connection.
11. Make sure that all boxes are checked under Input.
12. Click Save.
13. Figure 4 then shows on the screen again.

14. Click and drag the P/PMS icon to your desktop.
15. Exit the Connection in Figure 4.
16. You may now access P/PMS by double clicking the new icon. Your login information is saved in your Internet cache. Clearing your cache, a system failure, or getting a new computer may remove this information and you will need to re-install. *NOTE: If you have to reinstall, and forget or lose your password, you will have to contact a P/PMS Team Member to get it reset to the default.*
17. If you have any trouble please contact Lenny Robinson at 517-335-3291, Dennis Kelley at 517-373-4614, Scott Habetler at 517-335-3278, Melissa Tucker at 517-335-7298 or Tonya Nobach at 517-335-1297.
