Documentation of Pavement Responses

Sub Appendix F-1
Documentation of Pavement Responses for

18-kips Single Axle

Figures F-1-1 through F-1-12 illustrate the impact of PCC thickness and base/subbase thickness on stresses (100-psi/in. modulus of subgrade reaction and PCC shoulder)

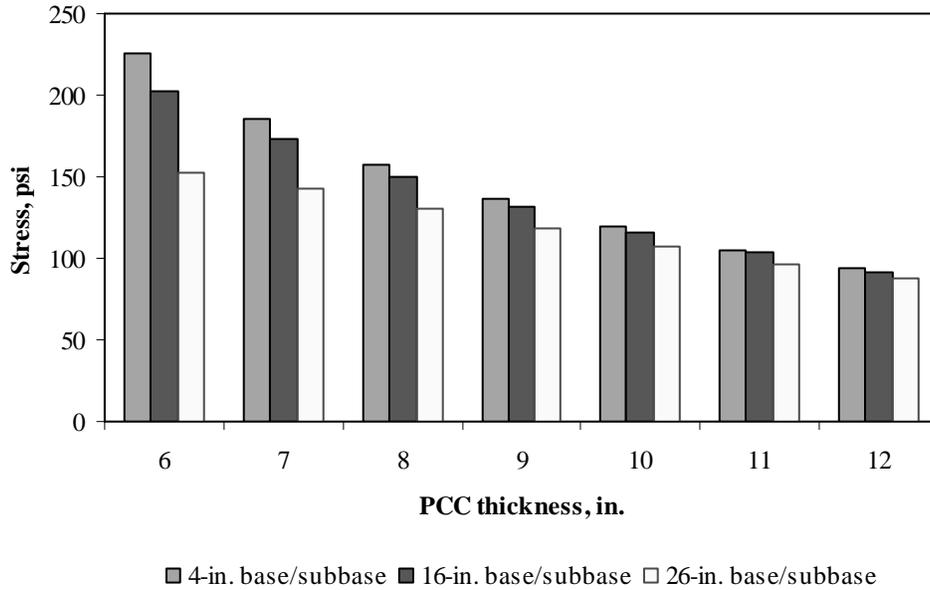

Figure F-1-1: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

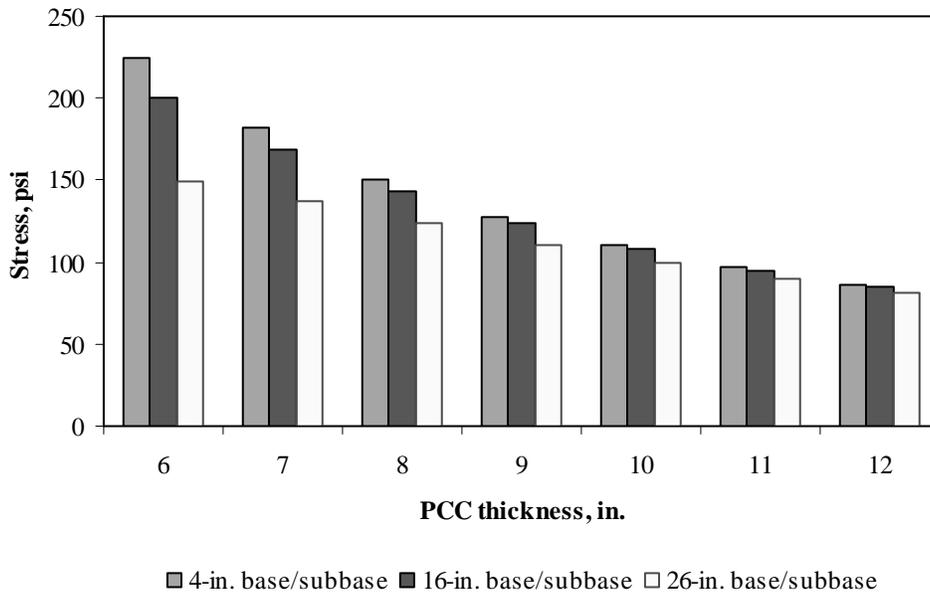

Figure F-1-2: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

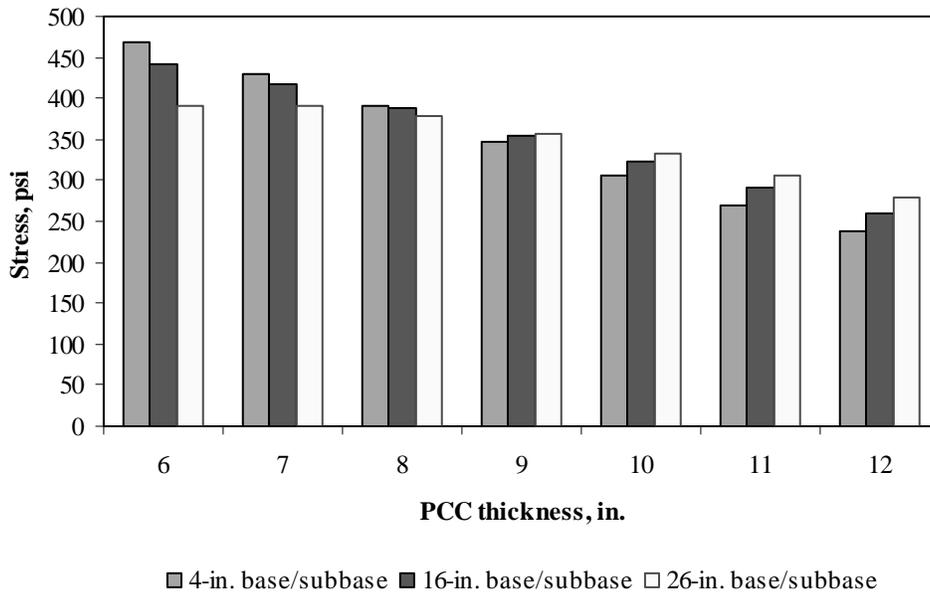

Figure F-1-3: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

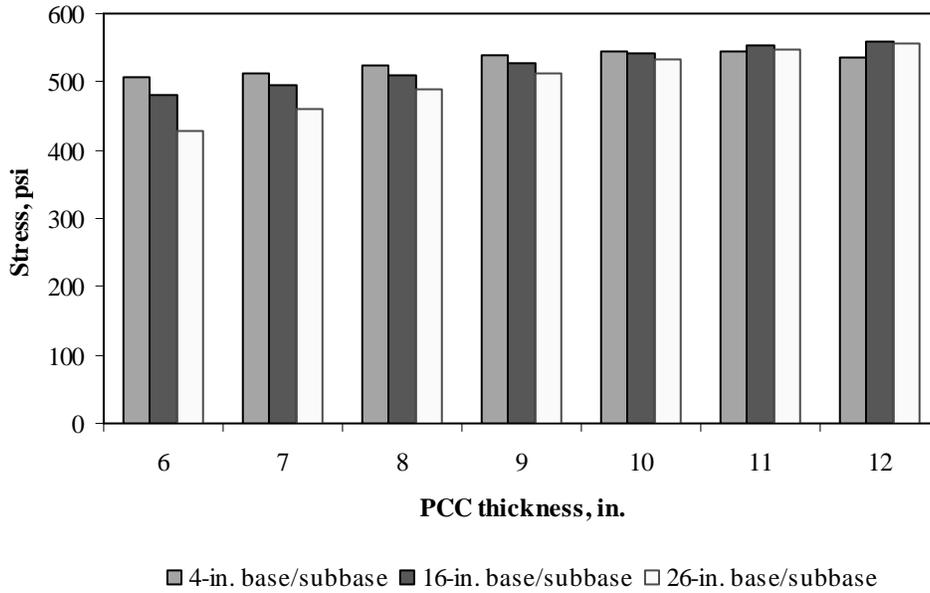

Figure F-1-4: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

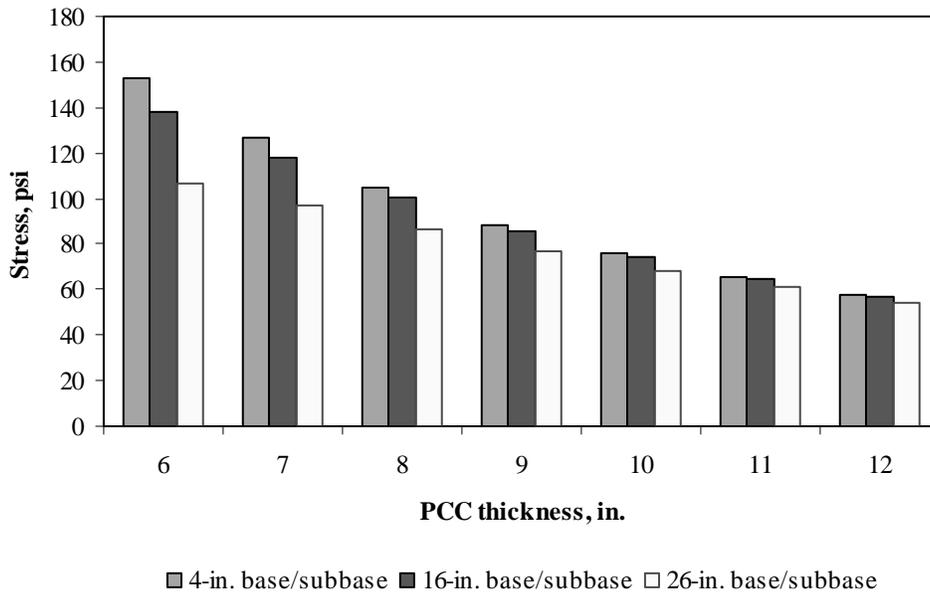

Figure F-1-5: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

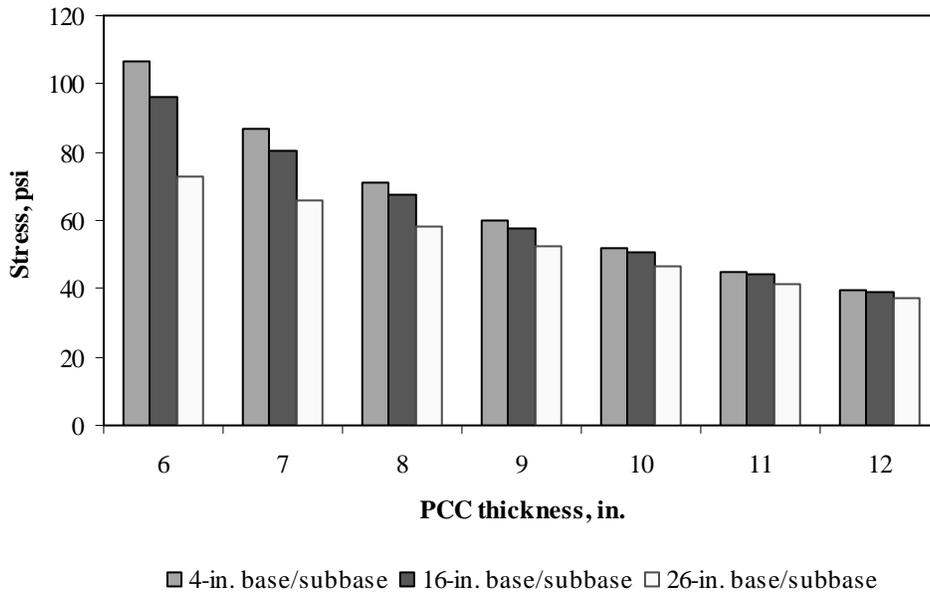

Figure F-1-6: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

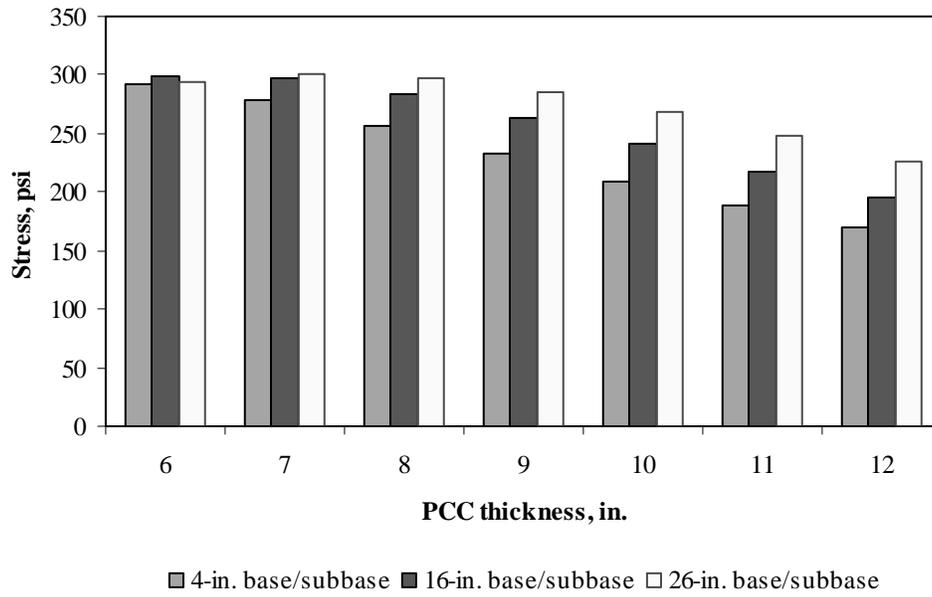

Figure F-1-7: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

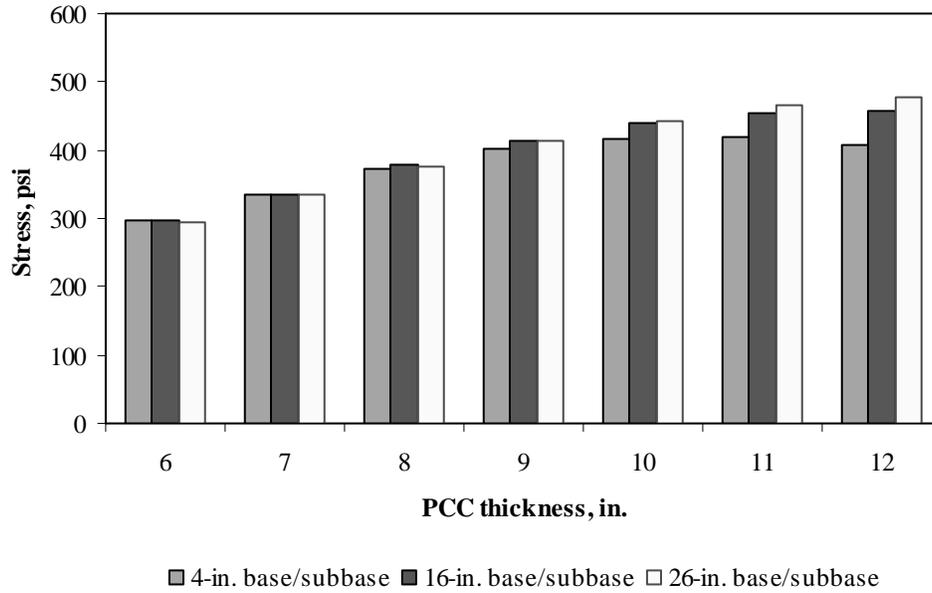

Figure F-1-8: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

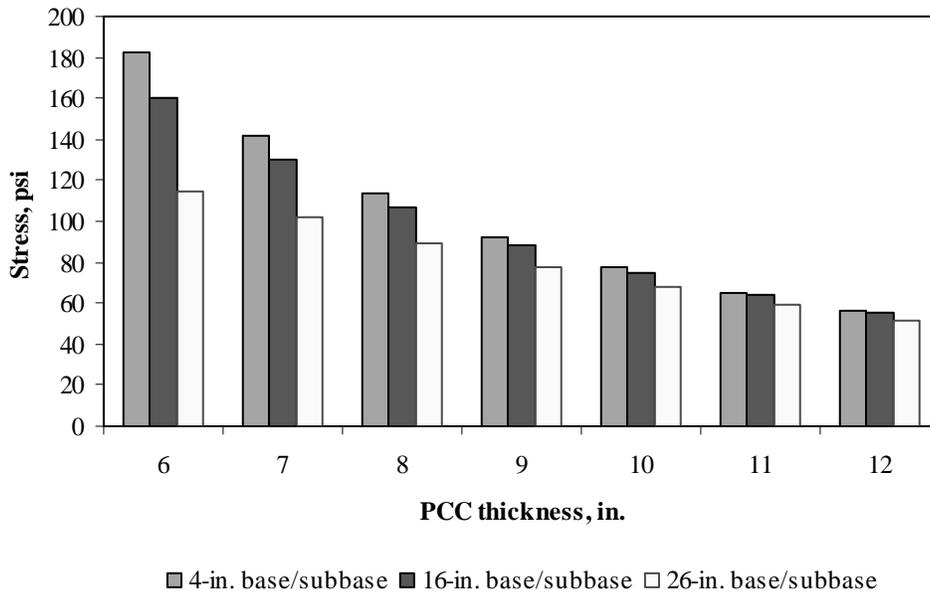

Figure F-1-9: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

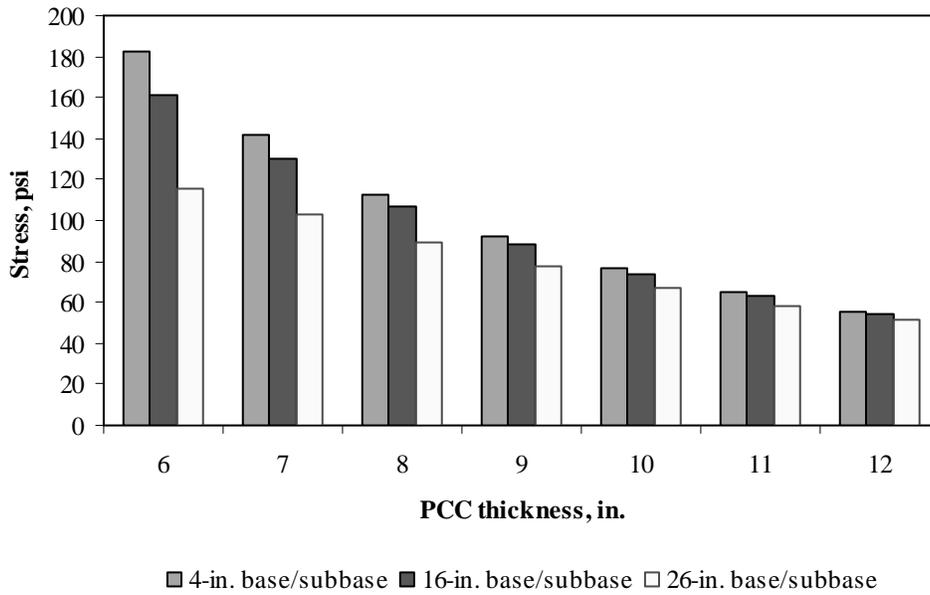

Figure F-1-10: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

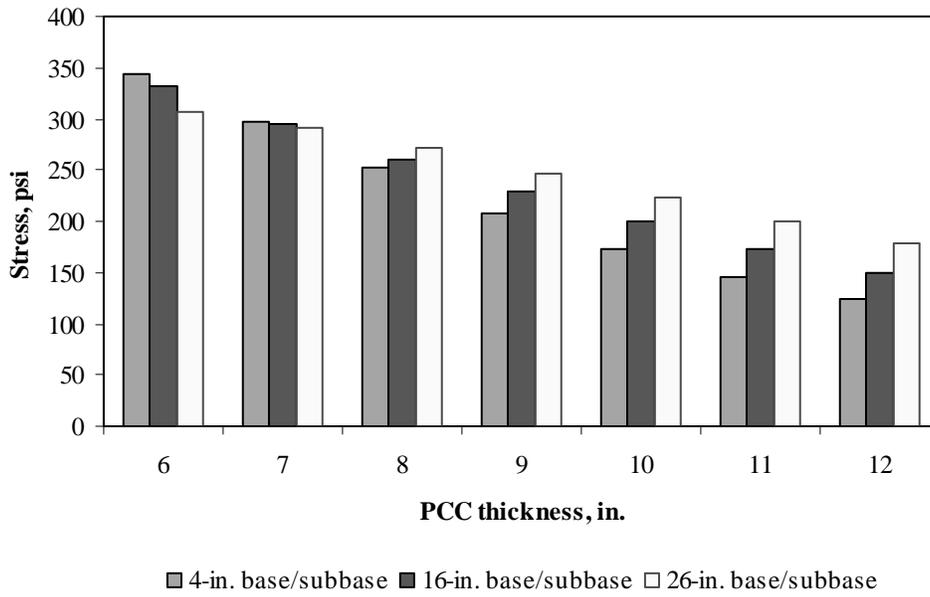

Figure F-1-11: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

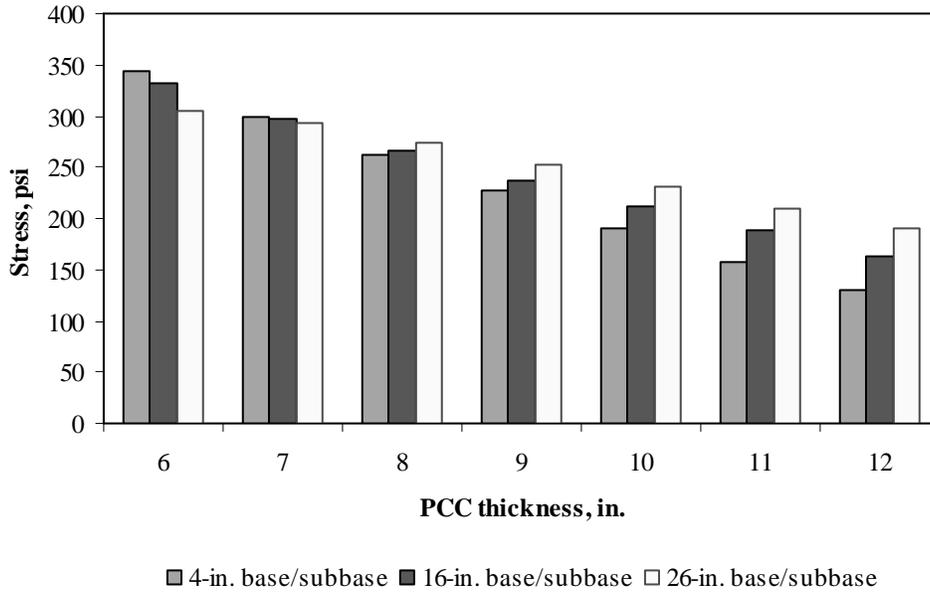

Figure F-1-12: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

Figures F-1-13 through F-1-24 illustrate the impact of PCC thickness and modulus of subgrade reaction on stresses (16-in. base/subbase thickness and PCC shoulder)

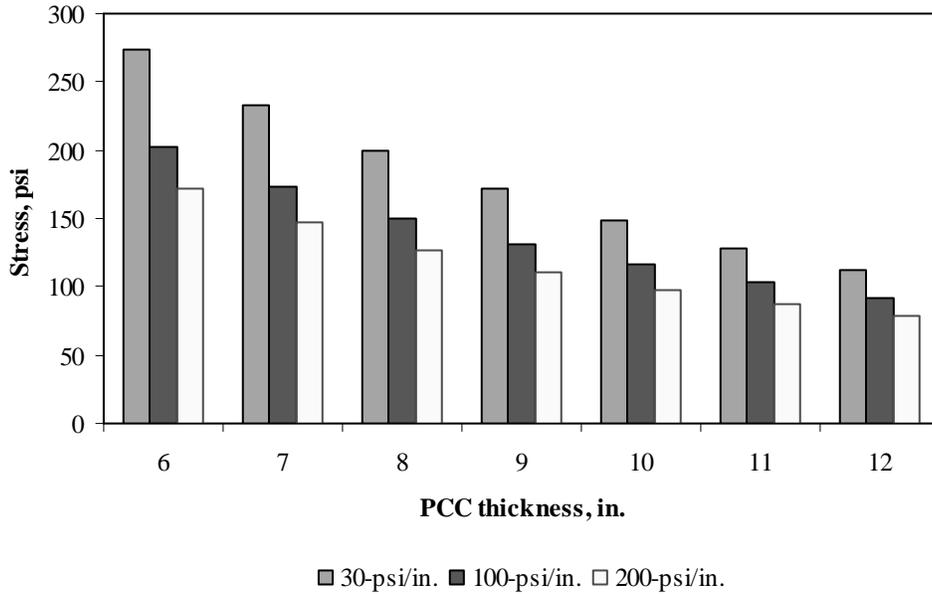

Figure F-1-13: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

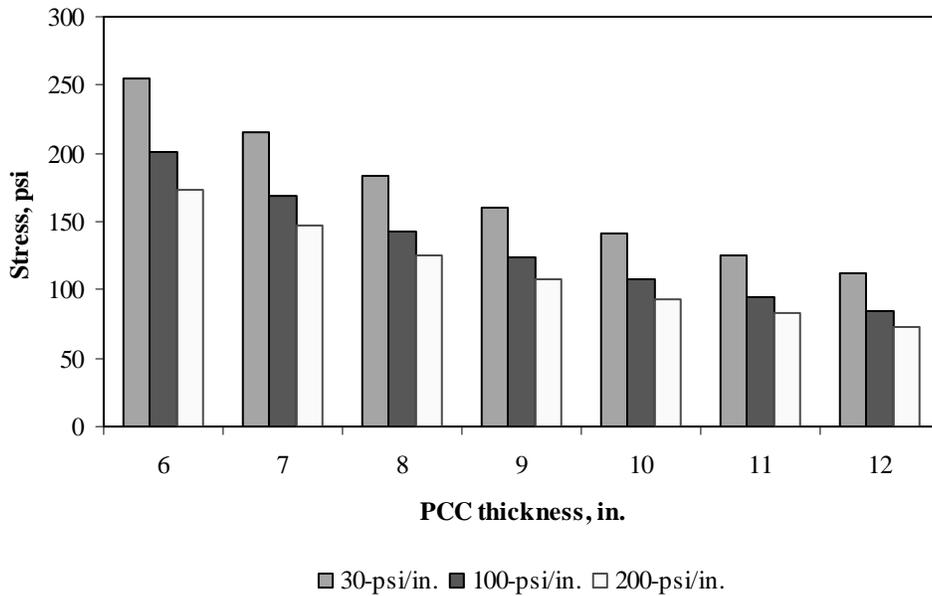

Figure F-1-14: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

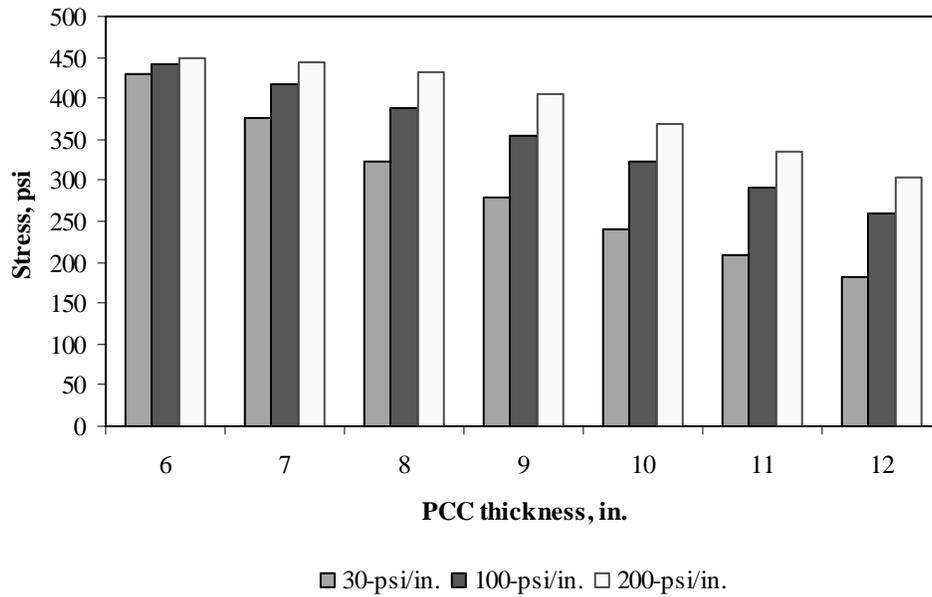

Figure F-1-15: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

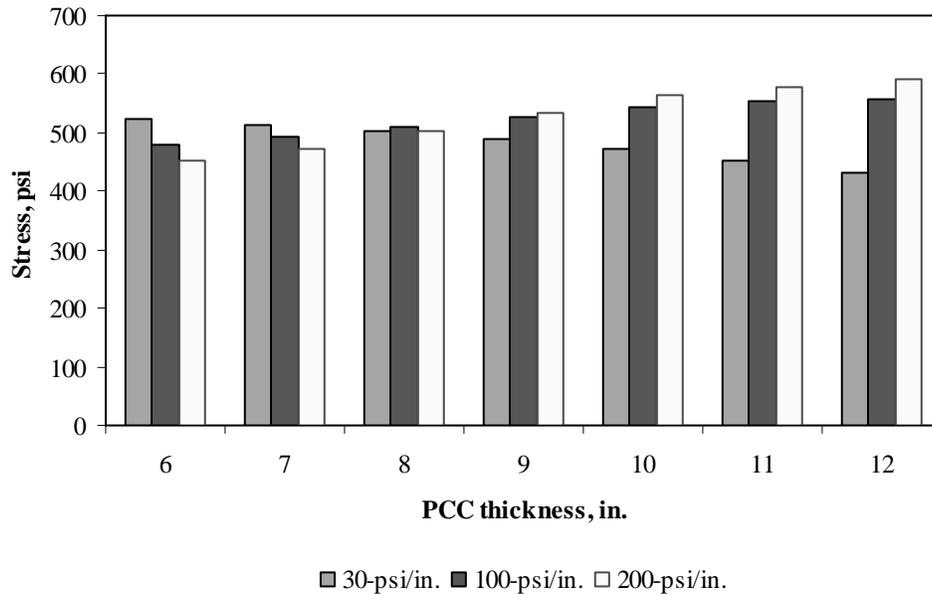

Figure F-1-16: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

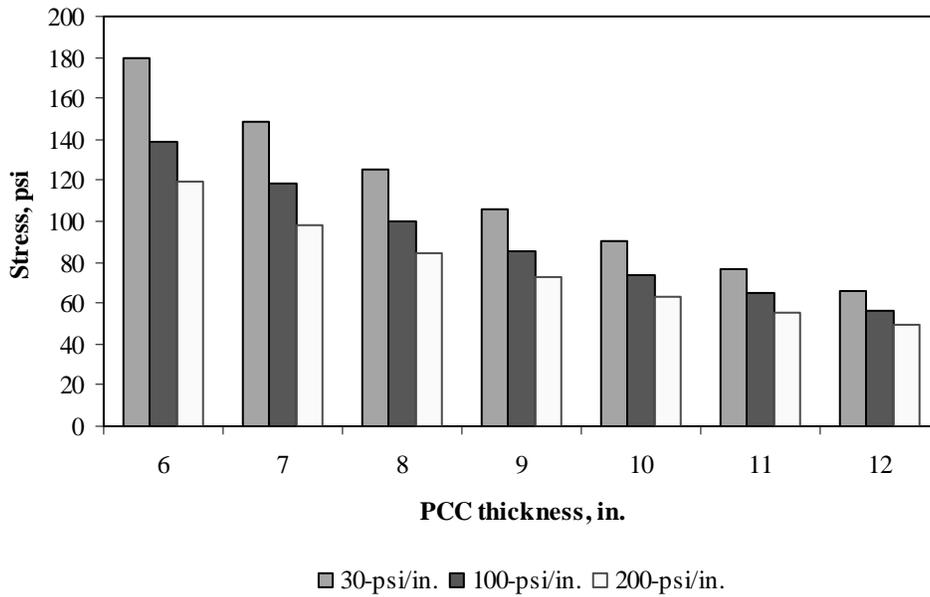

Figure F-1-17: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

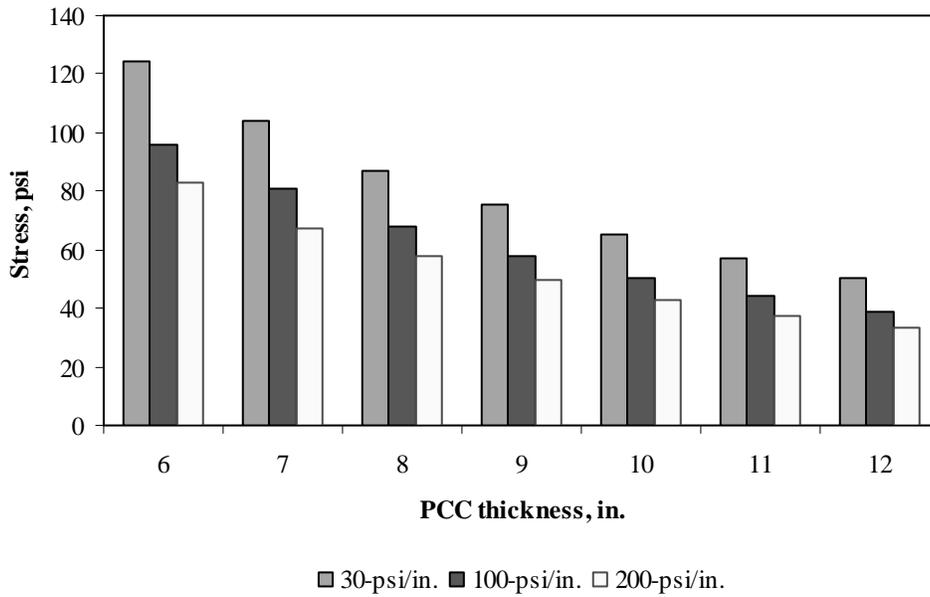

Figure F-1-18: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

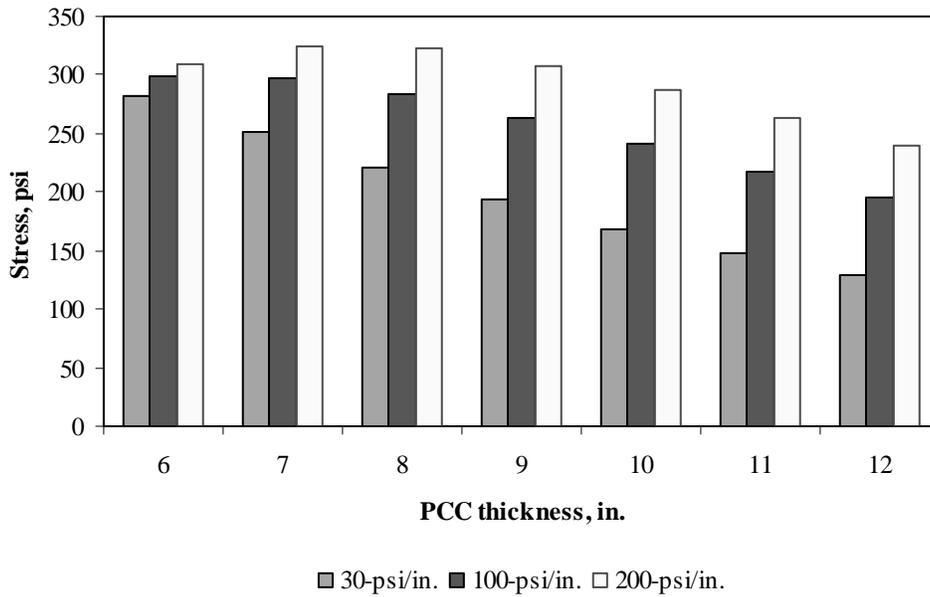

Figure F-1-19: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

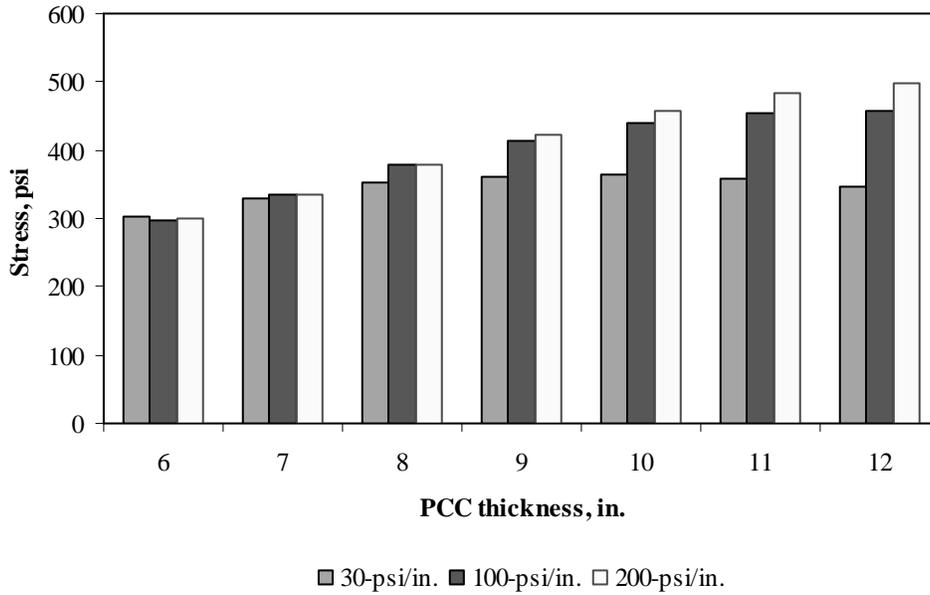

Figure F-1-20: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

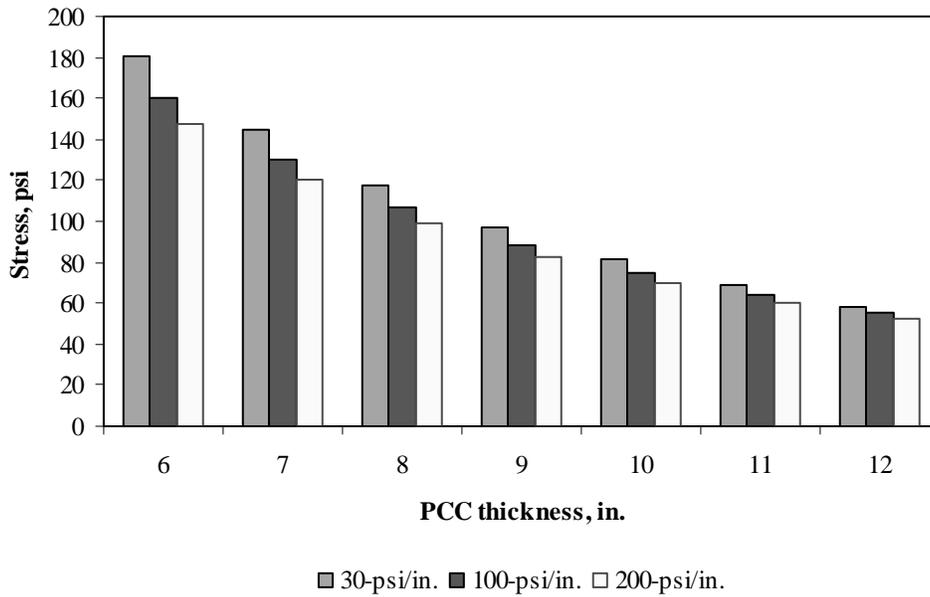

Figure F-1-21: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

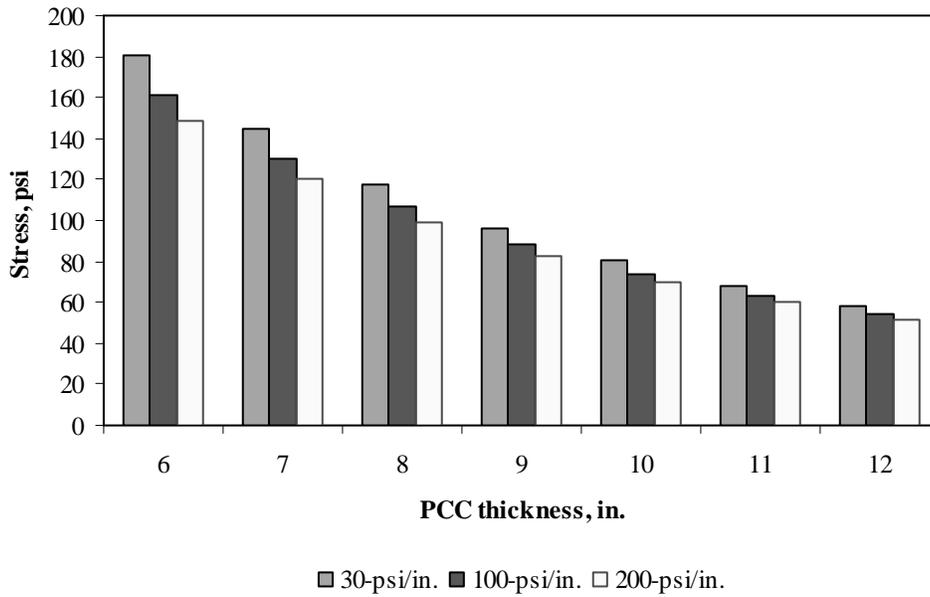

Figure F-1-22: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

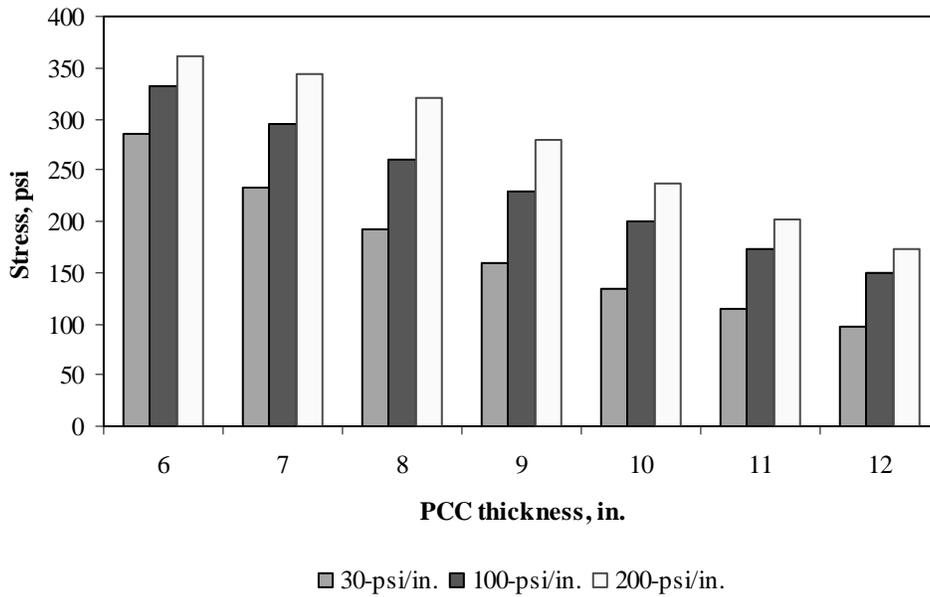

Figure F-1-23: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

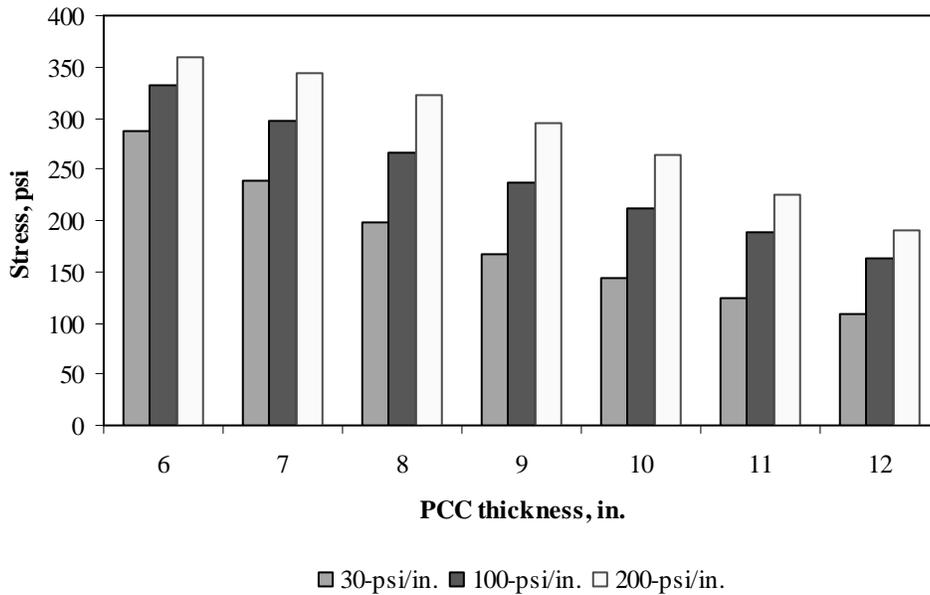

Figure F-1-24: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

Figures F-1-25 through F-1-36 illustrate the impact of PCC thickness and lateral support condition on stresses (16-in. base/subbase and 100-psi/in. modulus of subgrade reaction)

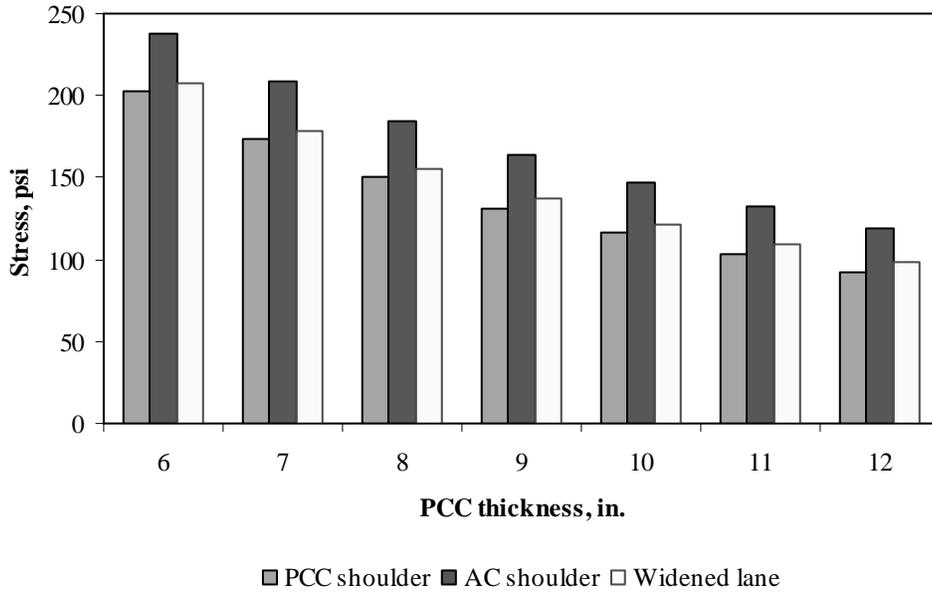

Figure F-1-25: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

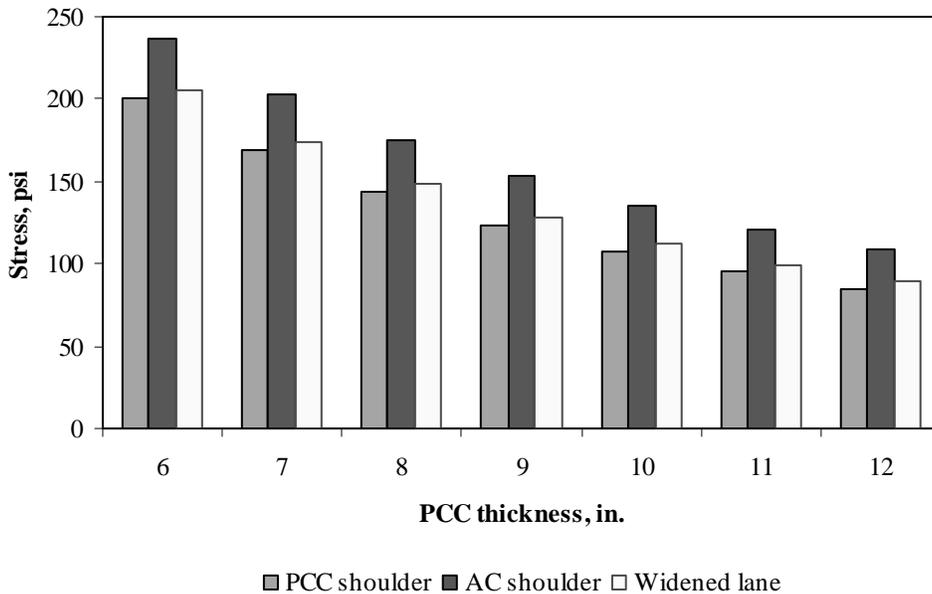

Figure F-1-26: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

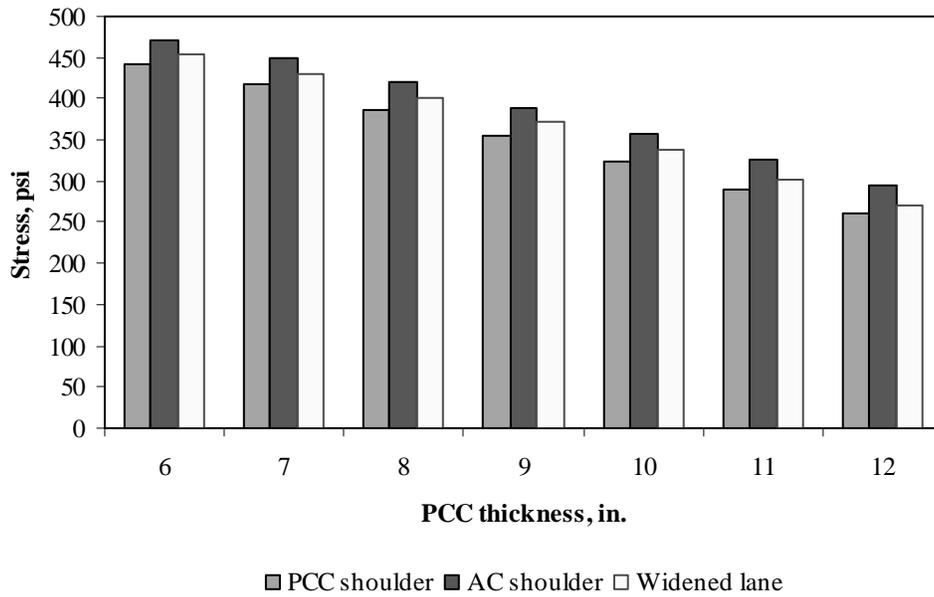

Figure F-1-27: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

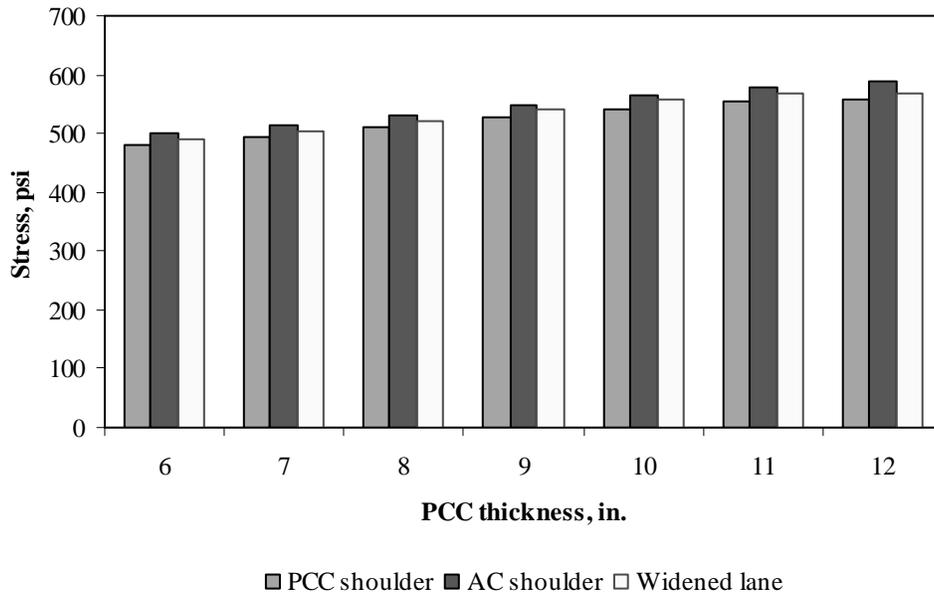

Figure F-1-28: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

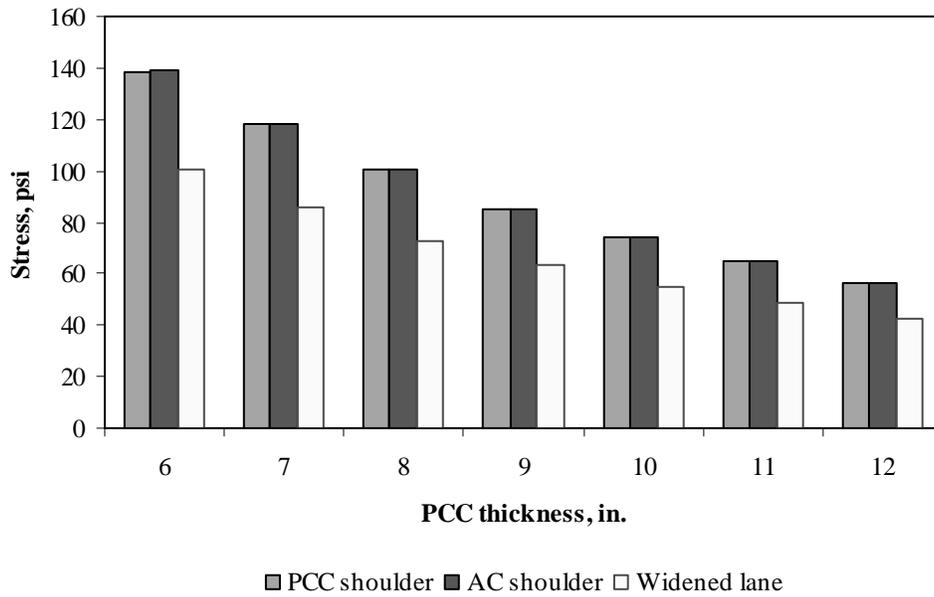

Figure F-1-29: Impact of PCC thickness and lateral support condition on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

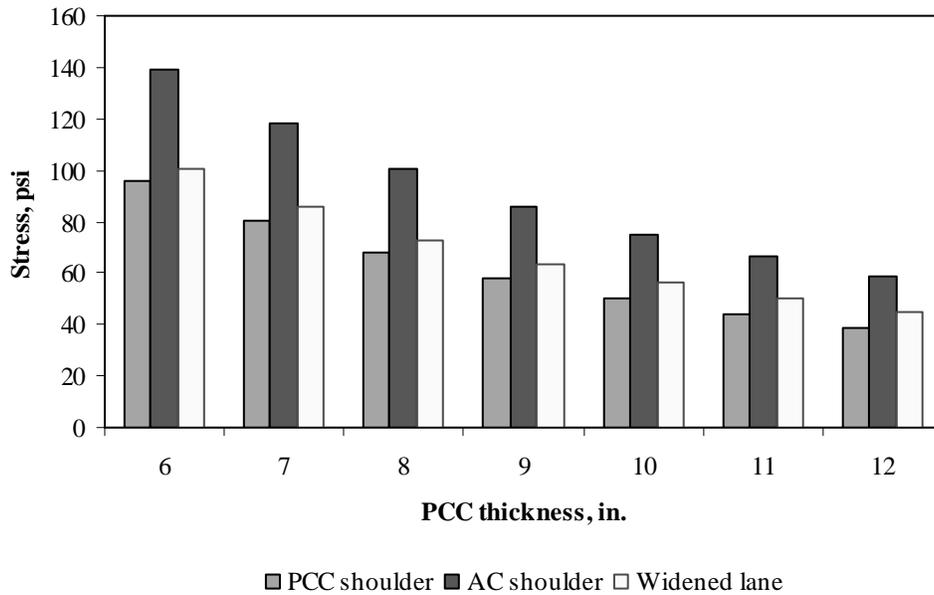

Figure F-1-30: Impact of PCC thickness and lateral support condition on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

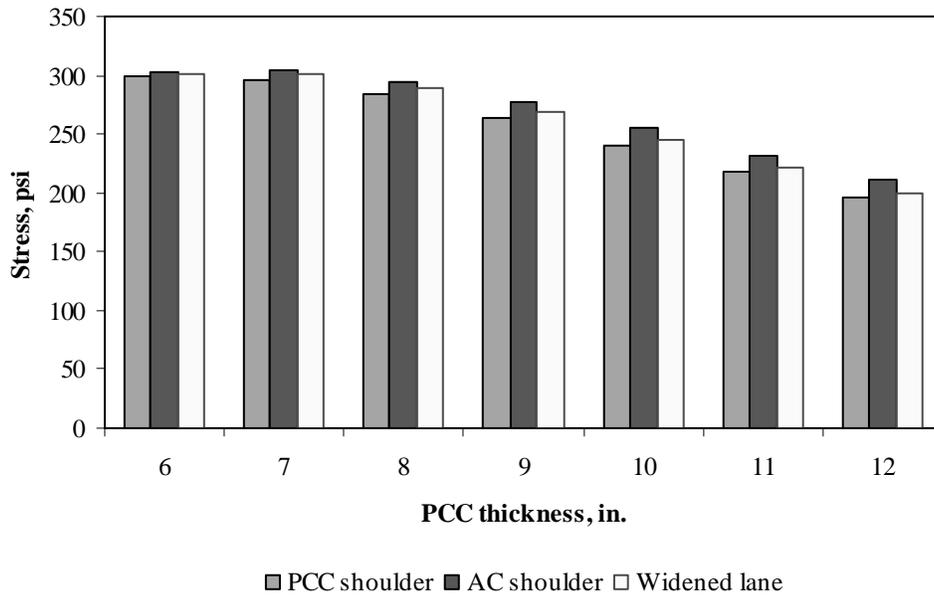

Figure F-1-31: Impact of PCC thickness and lateral support condition on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

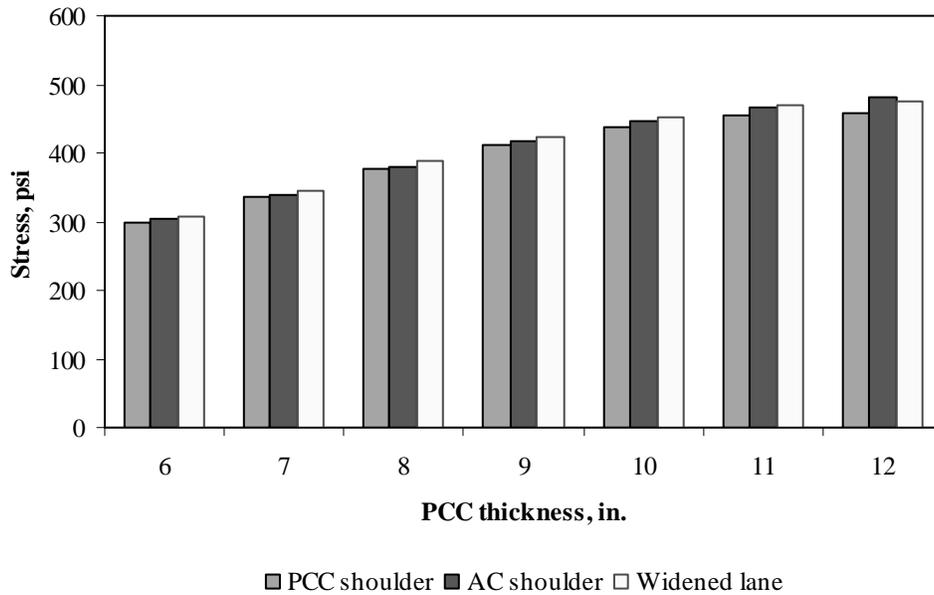

Figure F-1-32: Impact of PCC thickness and lateral support condition on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

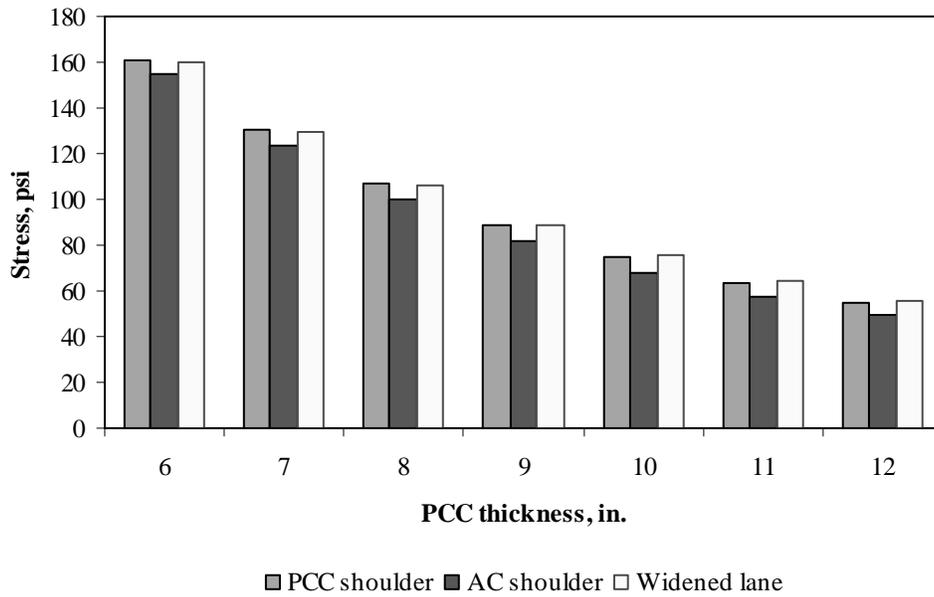

Figure F-1-33: Impact of PCC thickness and lateral support condition on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

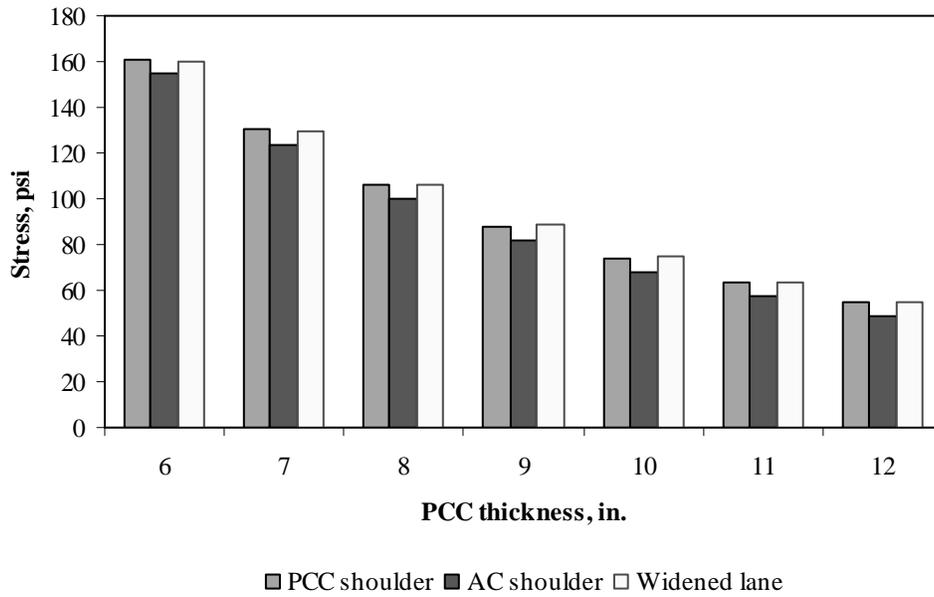

Figure F-1-34: Impact of PCC thickness and lateral support condition on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

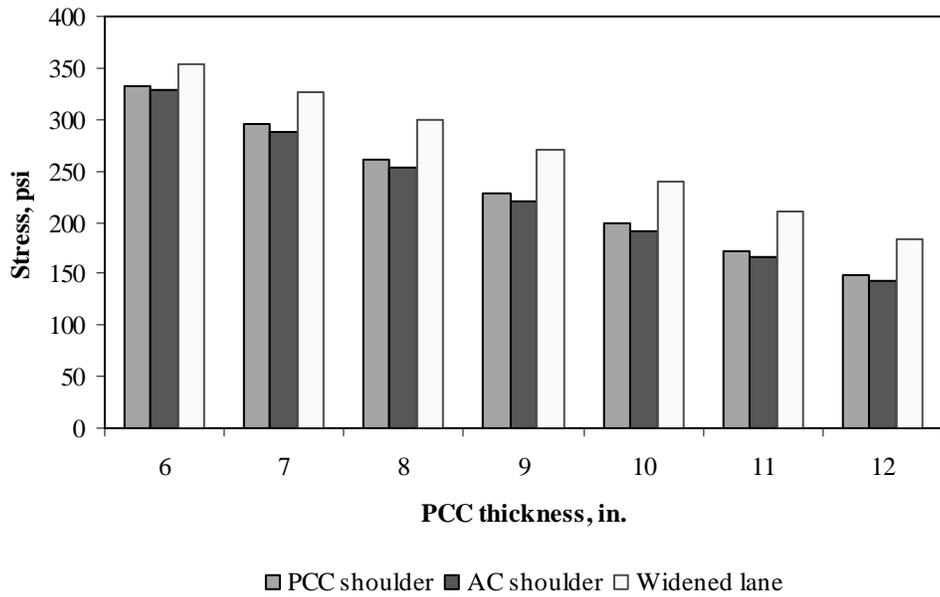

Figure F-1-35: Impact of PCC thickness and lateral support condition on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

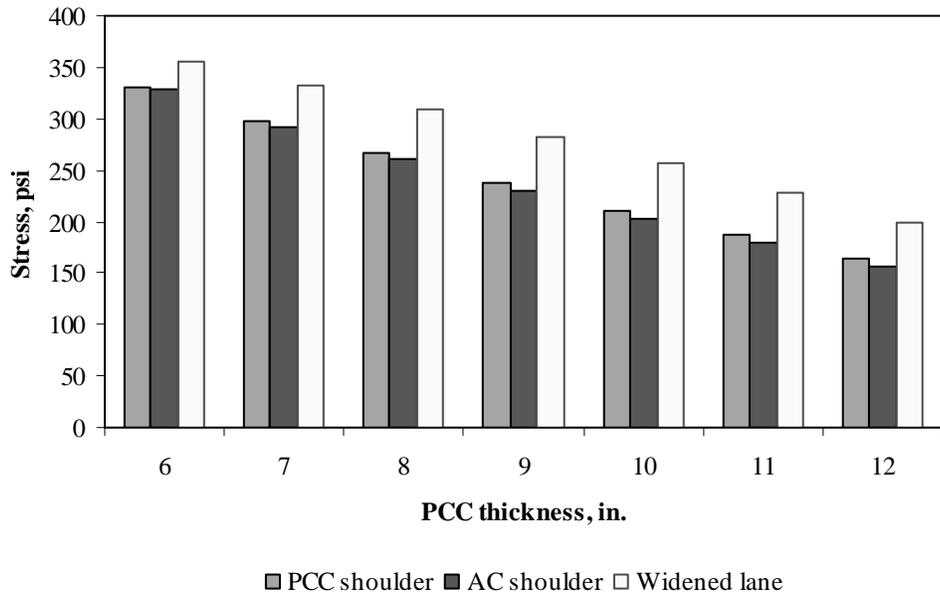

Figure F-1-36: Impact of PCC thickness and lateral support condition on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

Figures F-1-37 through F-1-42 illustrate the impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on stresses (10-in. PCC thickness, 100-psi/in. modulus of subgrade reaction and PCC shoulder)

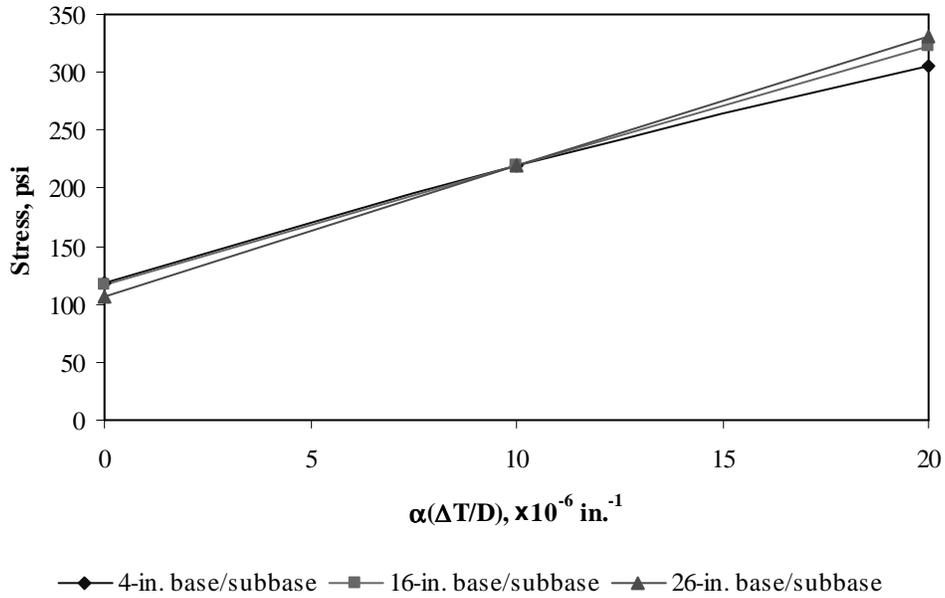

Figure F-1-37: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab (177-in. joint spacing)

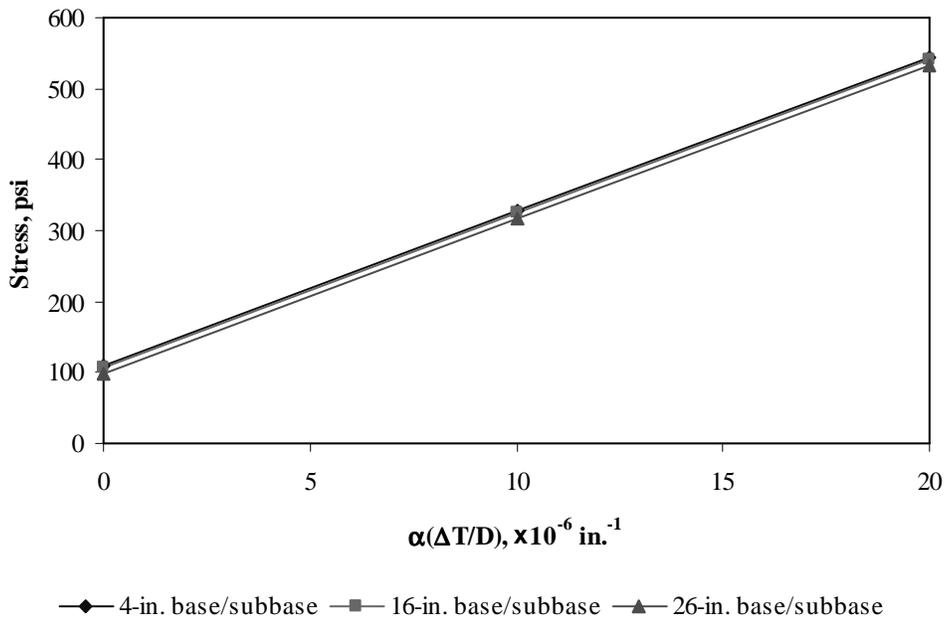

Figure F-1-38: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab (315-in. joint spacing)

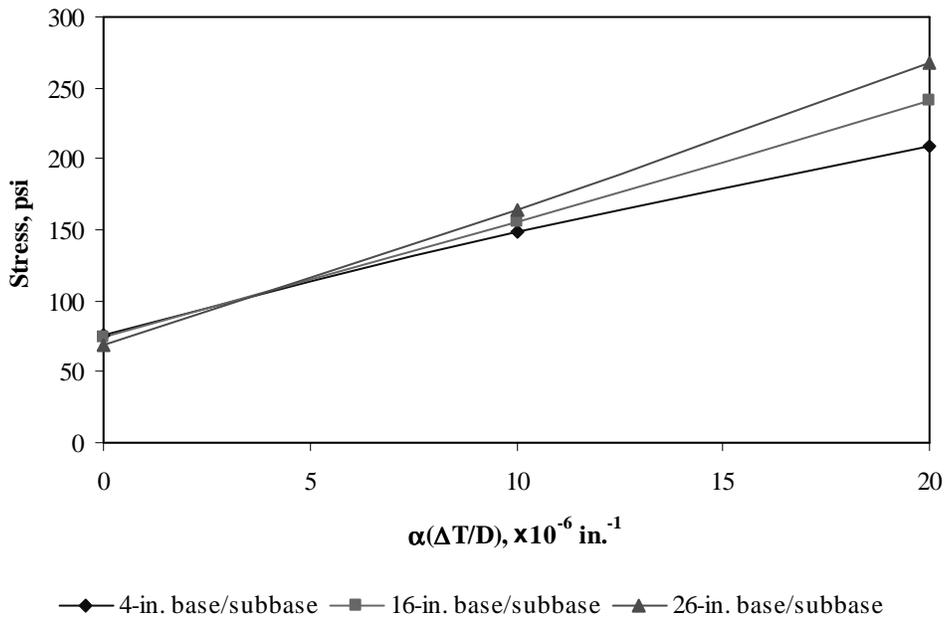

Figure F-1-39: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab (177-in. joint spacing)

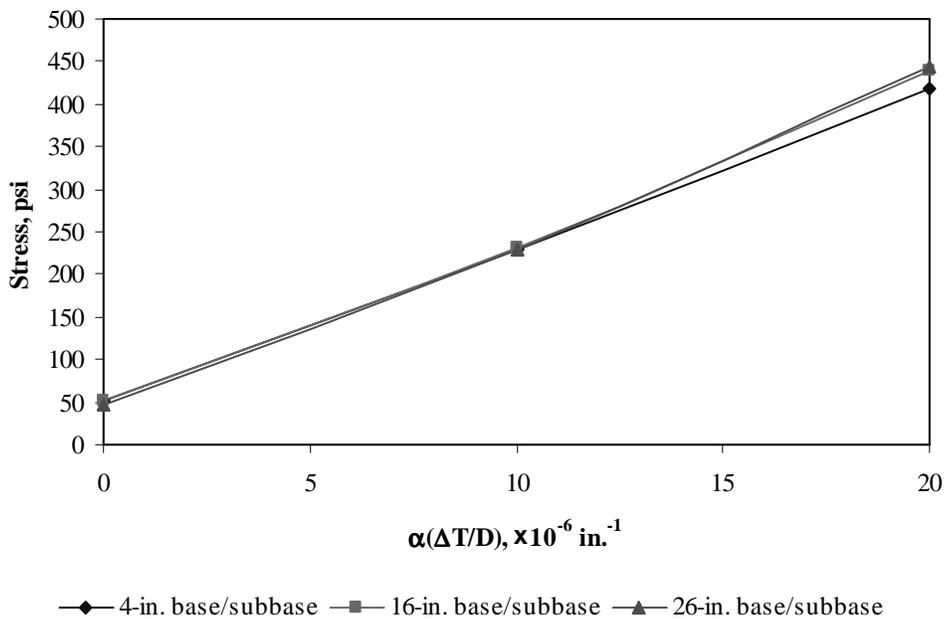

Figure F-1-40: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab (315-in. joint spacing)

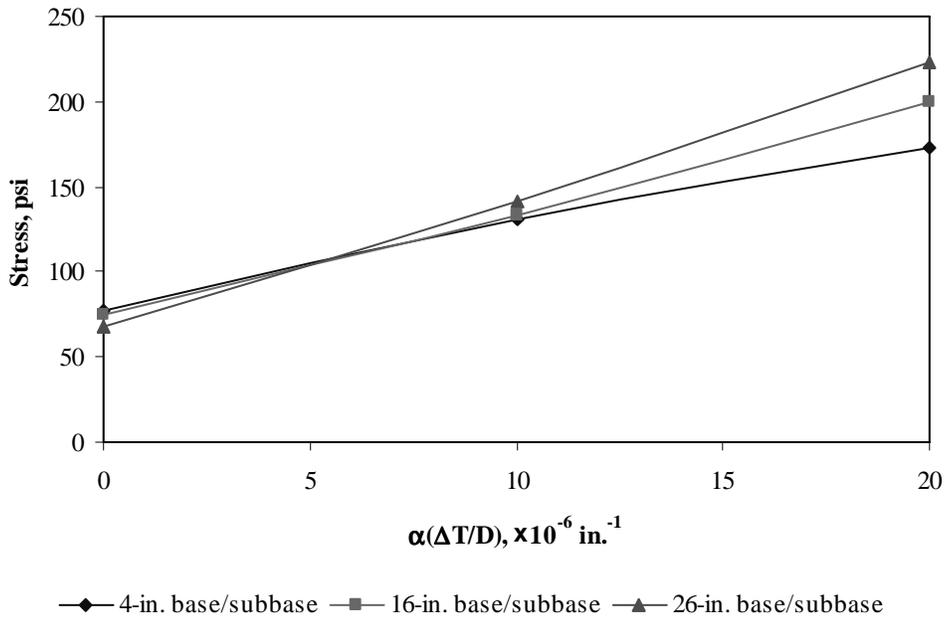

Figure F-1-41: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab (177-in. joint spacing)

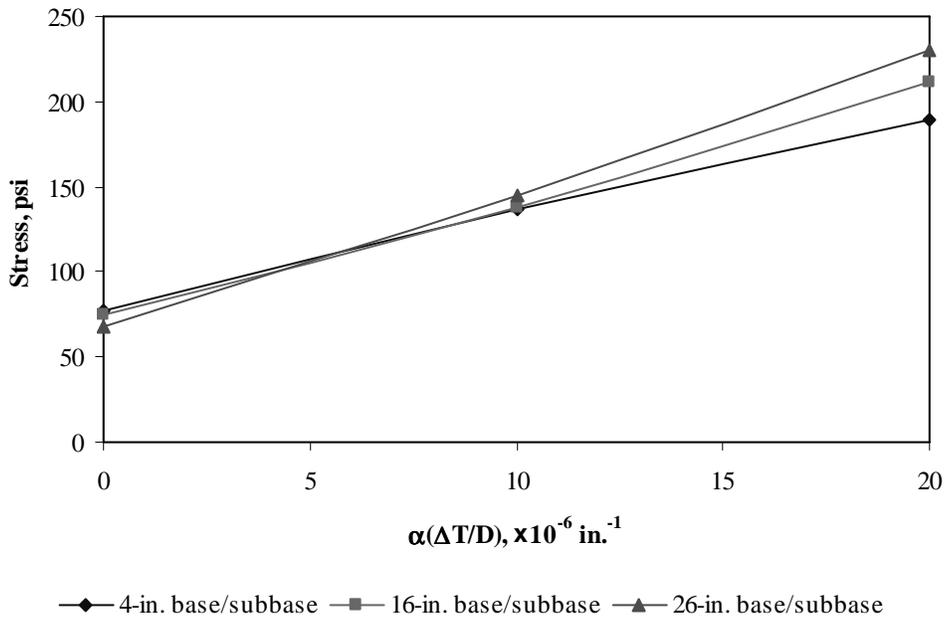

Figure F-1-42: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab (315-in. joint spacing)

Figures F-1-43 through F-1-48 illustrate the impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on stresses (10-in. PCC thickness, 16-in. base/subbase thickness and PCC shoulder)

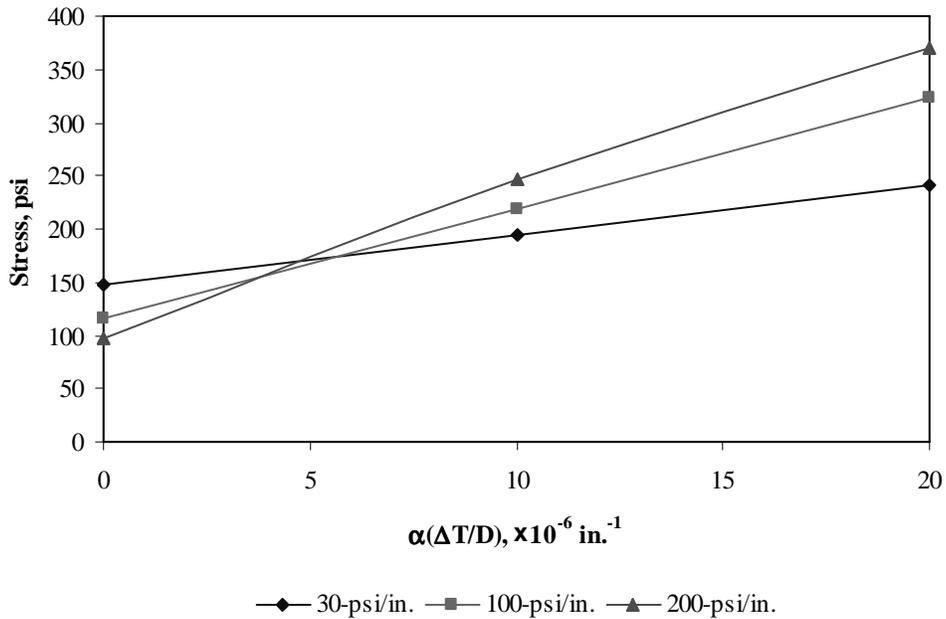

Figure F-1-43: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab (177-in. joint spacing)

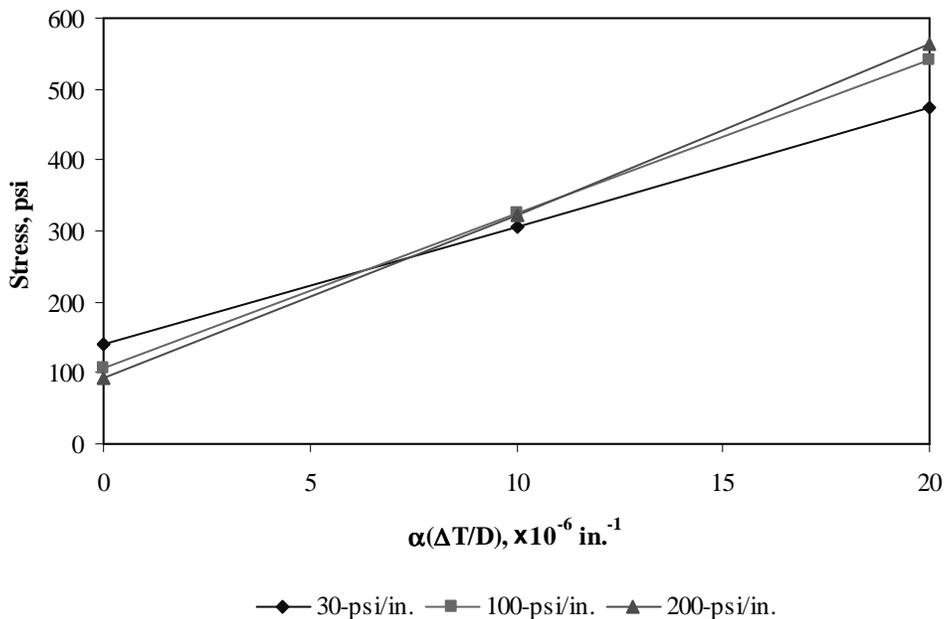

Figure F-1-44: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab (315-in. joint spacing)

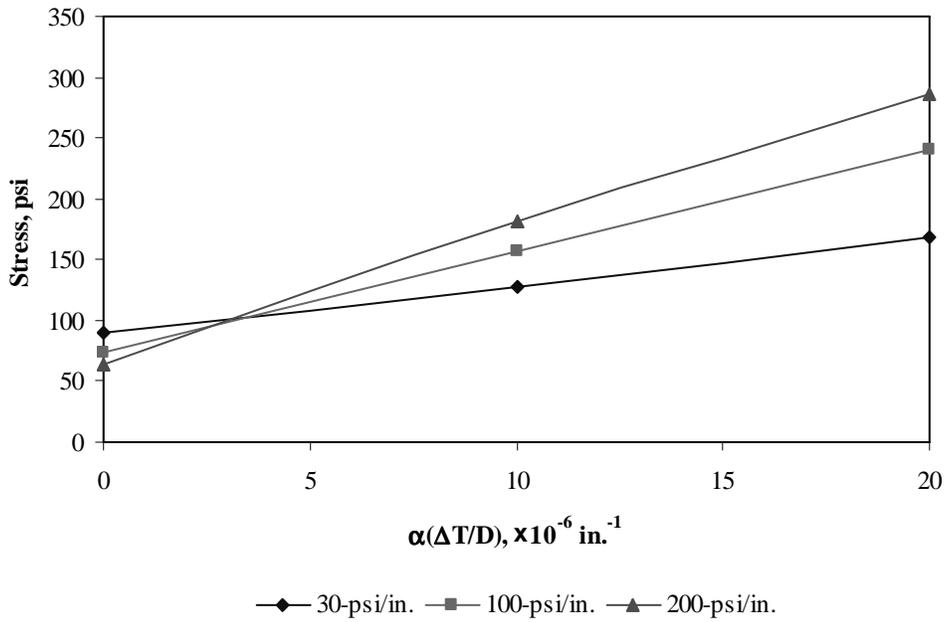

Figure F-1-45: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab (177-in. joint spacing)

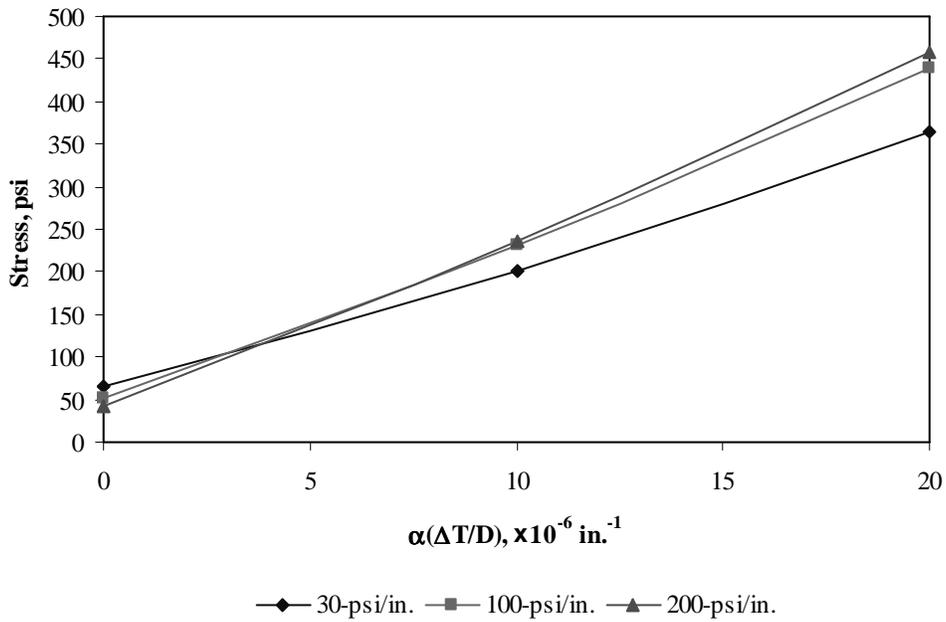

Figure F-1-46: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab (315-in. joint spacing)

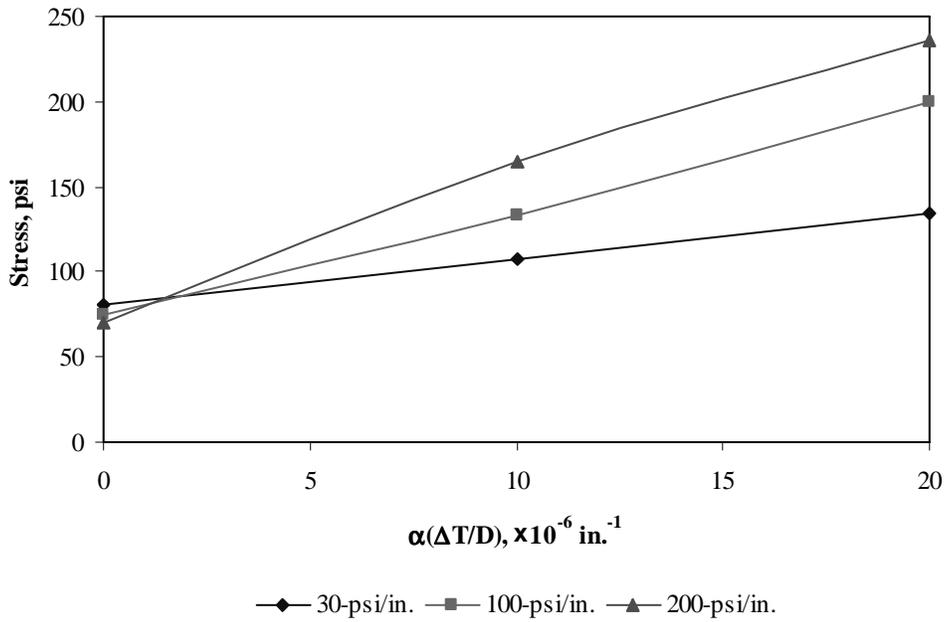

Figure F-1-47: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab (177-in. joint spacing)

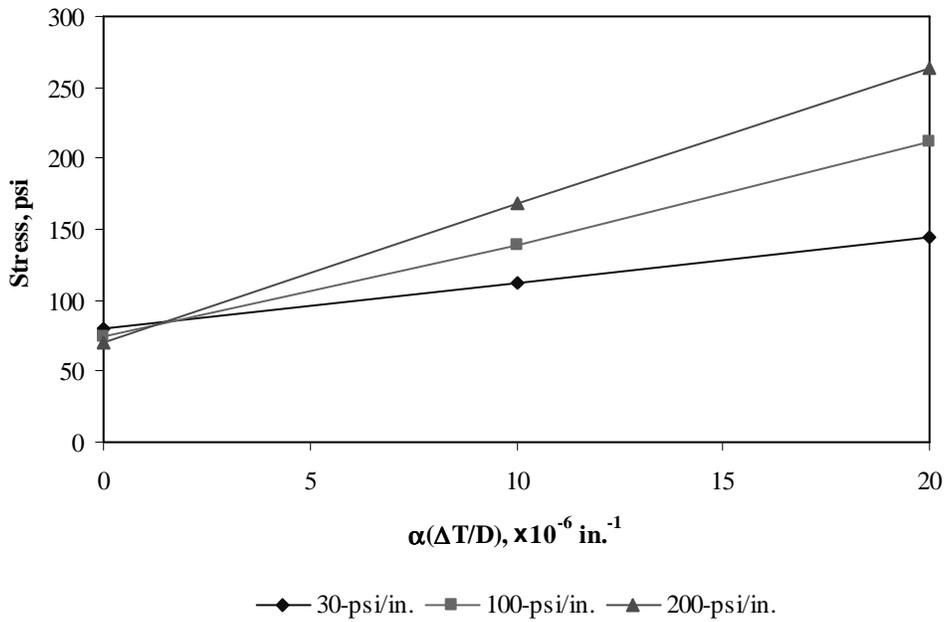

Figure F-1-48: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab (315-in. joint spacing)

Figures F-1-49 through F-1-51 illustrate the impact of joint spacing and product $\alpha(\Delta T/D)$ on stresses (10-in. PCC thickness, 16-in. base/subbase thickness, 100-psi/in. modulus of subgrade reaction and PCC shoulder)

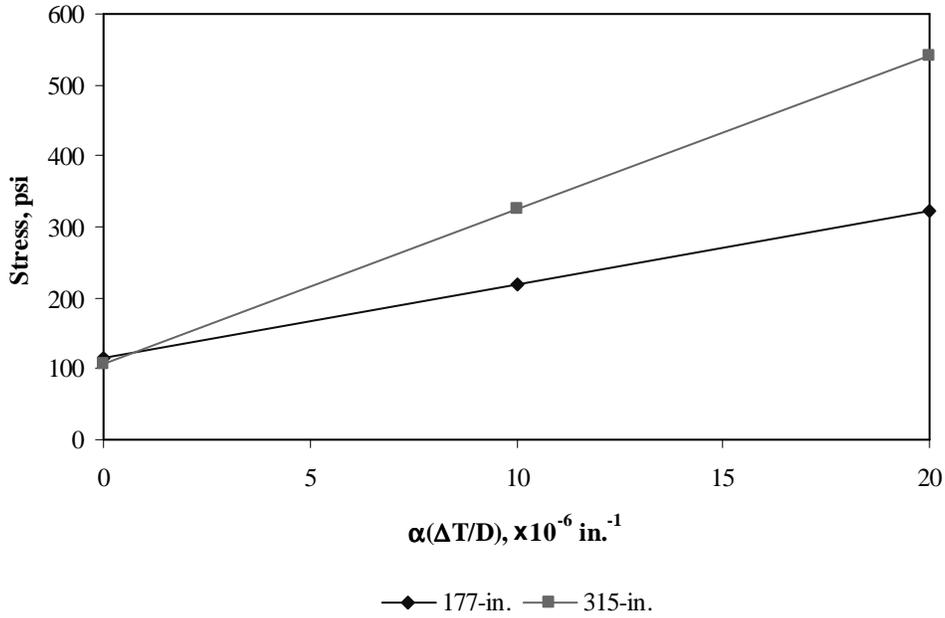

Figure F-1-49: Impact of joint spacing and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab

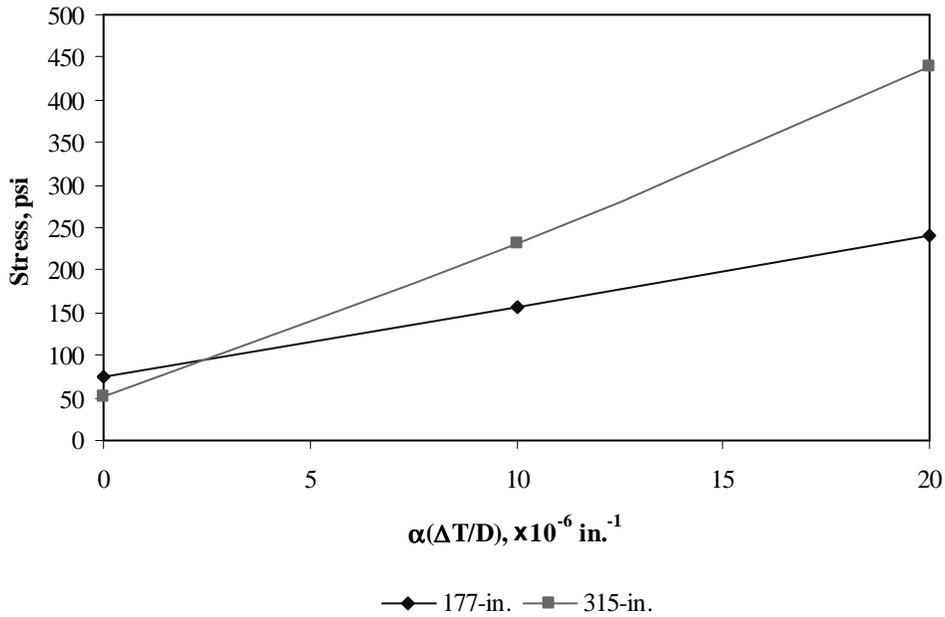

Figure F-1-50: Impact of joint spacing and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab

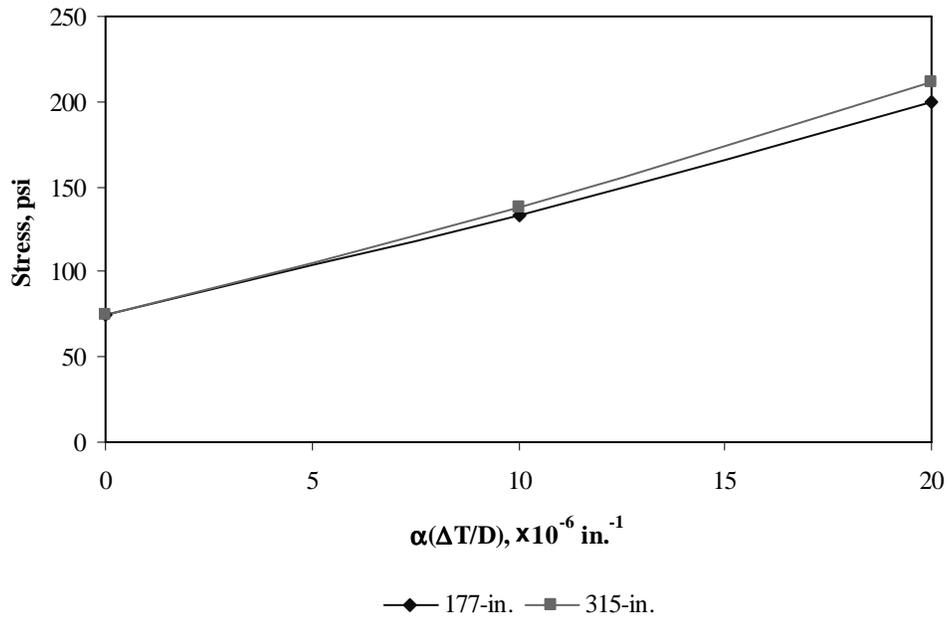

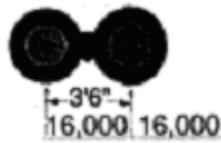

Figure F-1-51: Impact of joint spacing and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab

Sub Appendix F-2
Documentation of Pavement Responses for

32-kips Tandem Axle

Figures F-2-1 through F-2-12 illustrate the impact of PCC thickness and base/subbase thickness on stresses (100-psi/in. modulus of subgrade reaction and PCC shoulder)

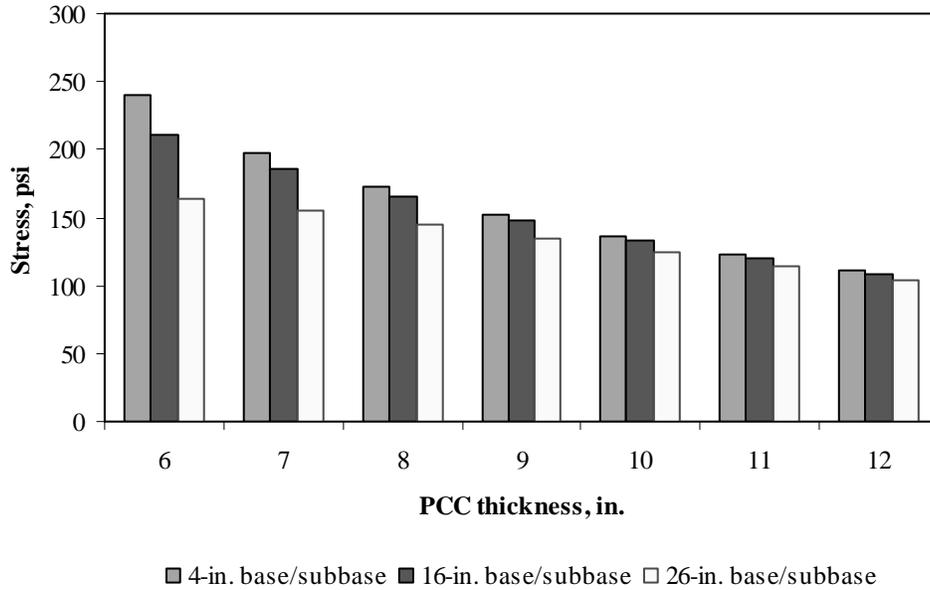

Figure F-2-1: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

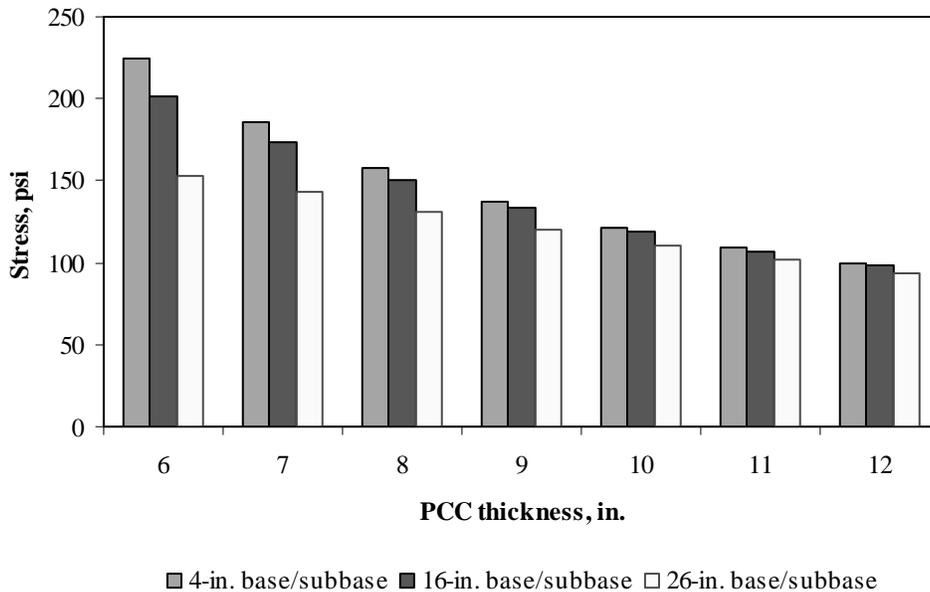

Figure F-2-2: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

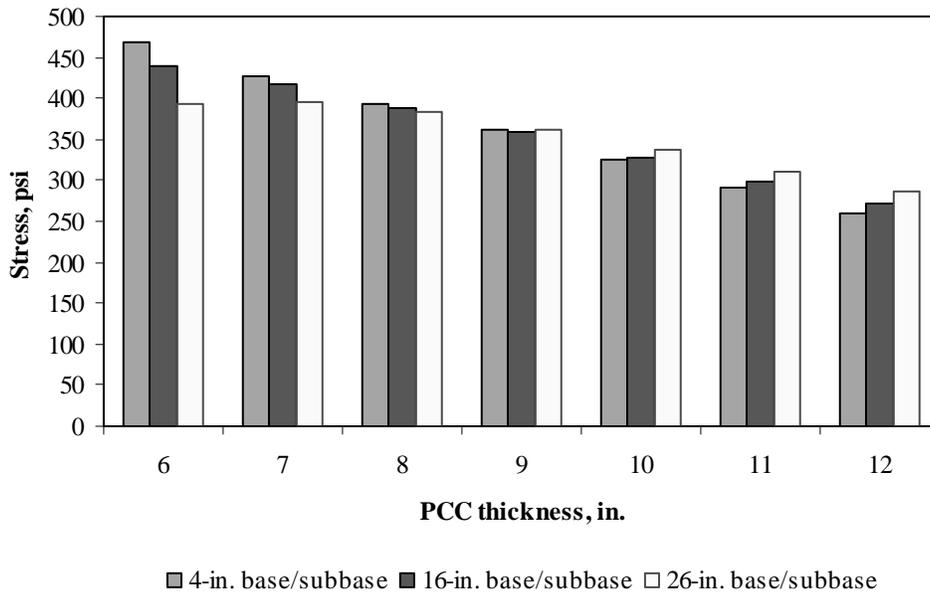

Figure F-2-3: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

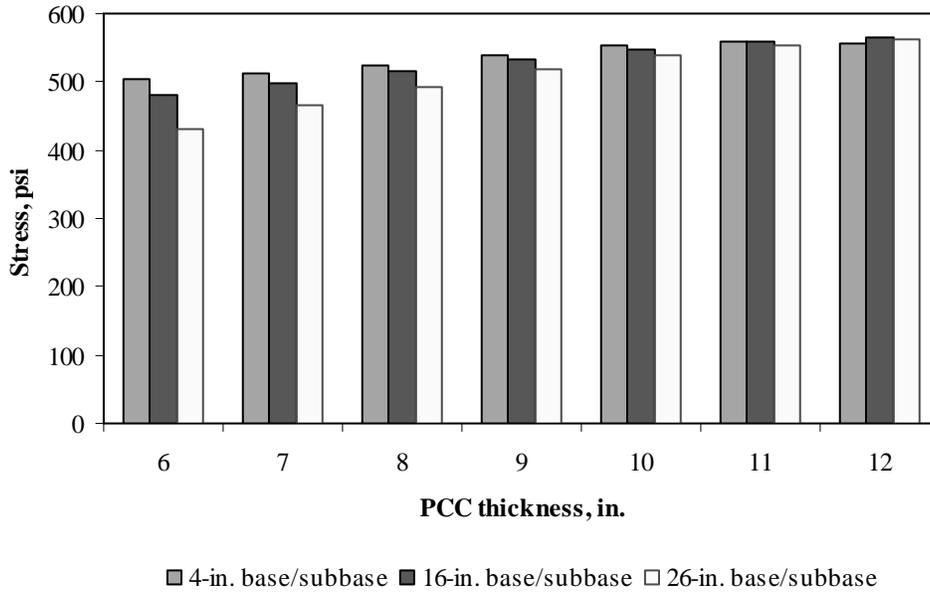

Figure F-2-4: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

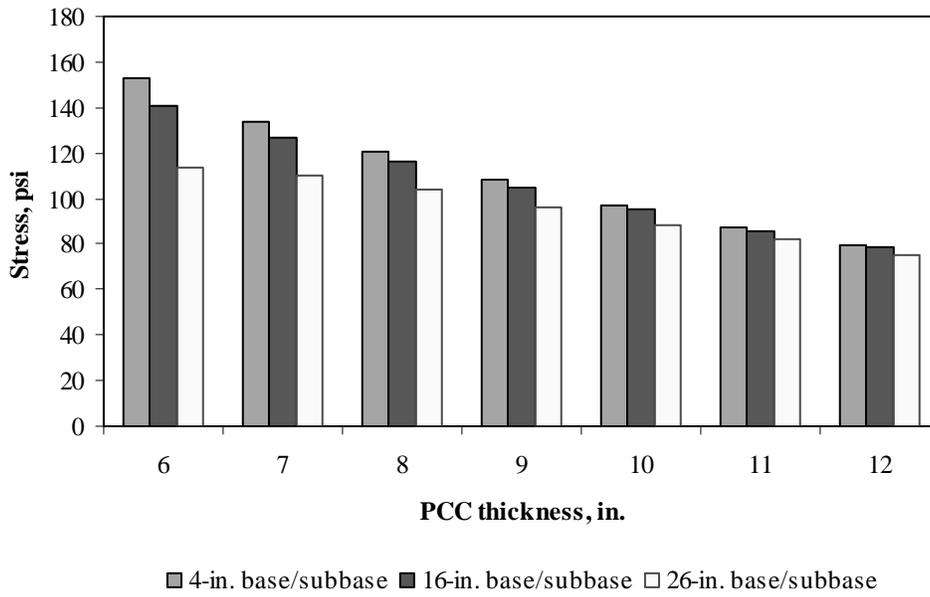

Figure F-2-5: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

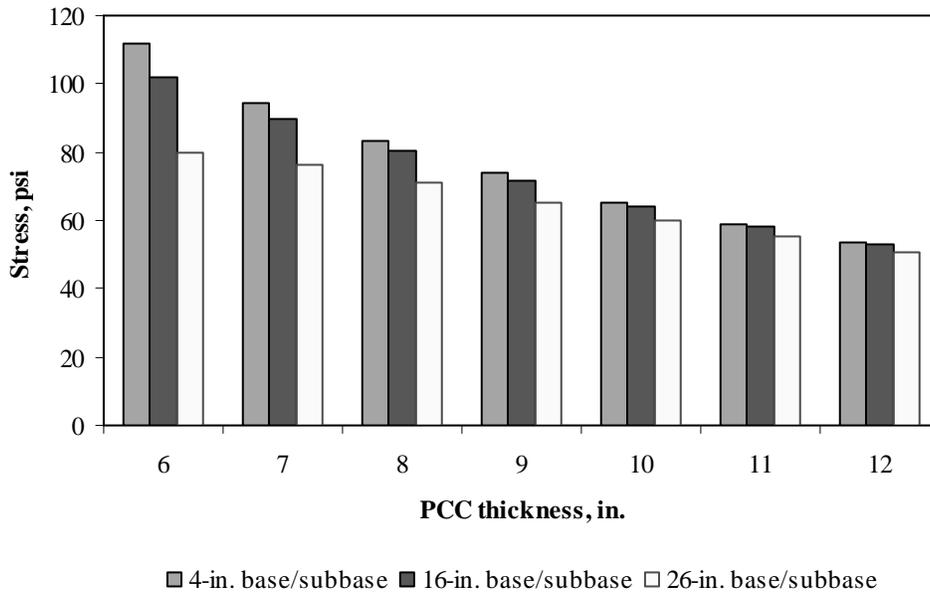

Figure F-2-6: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

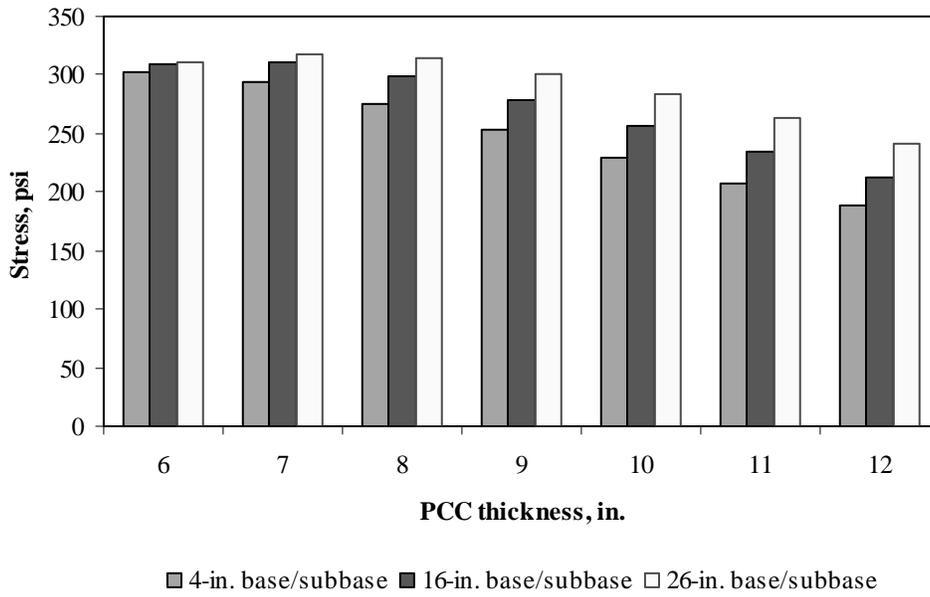

Figure F-2-7: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

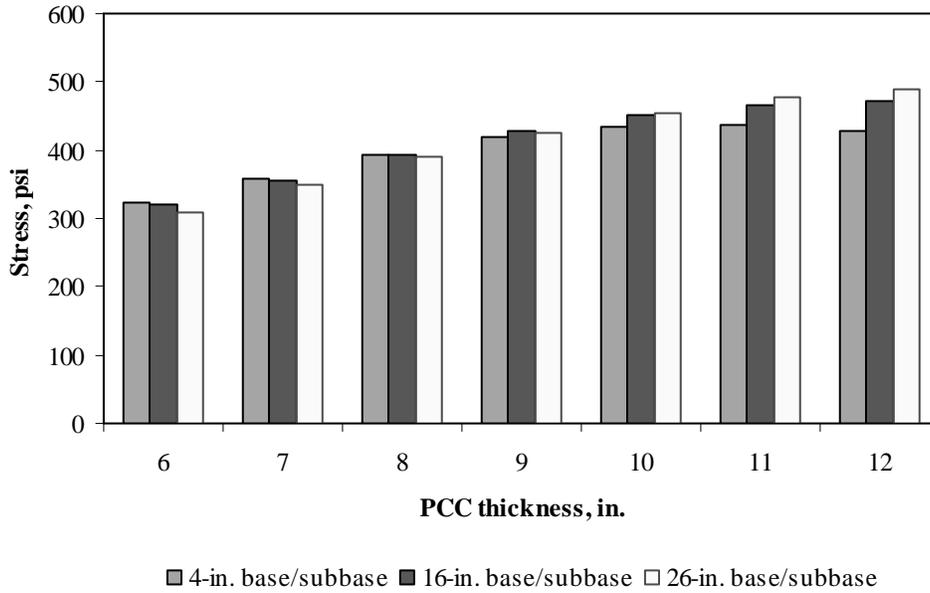

Figure F-2-8: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

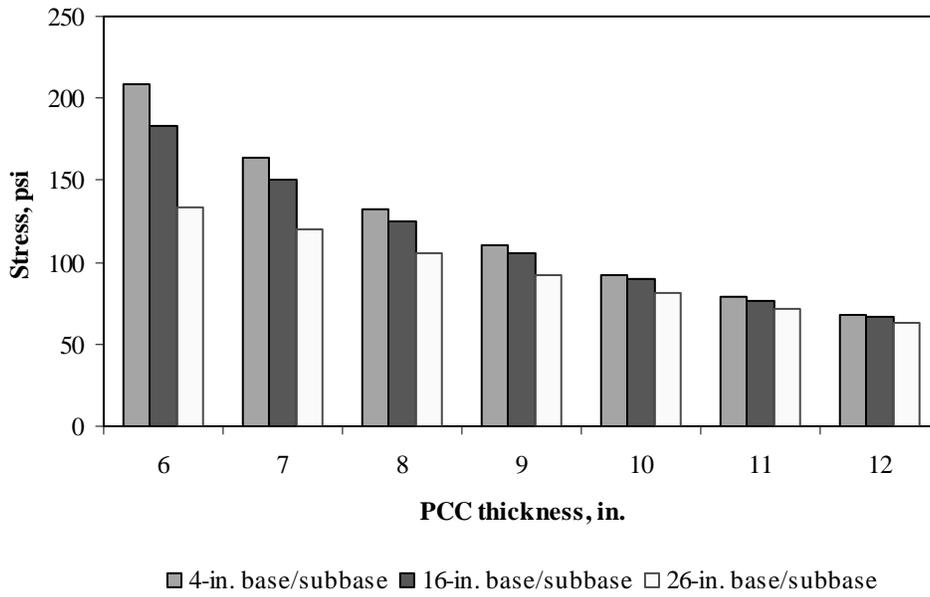

Figure F-2-9: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

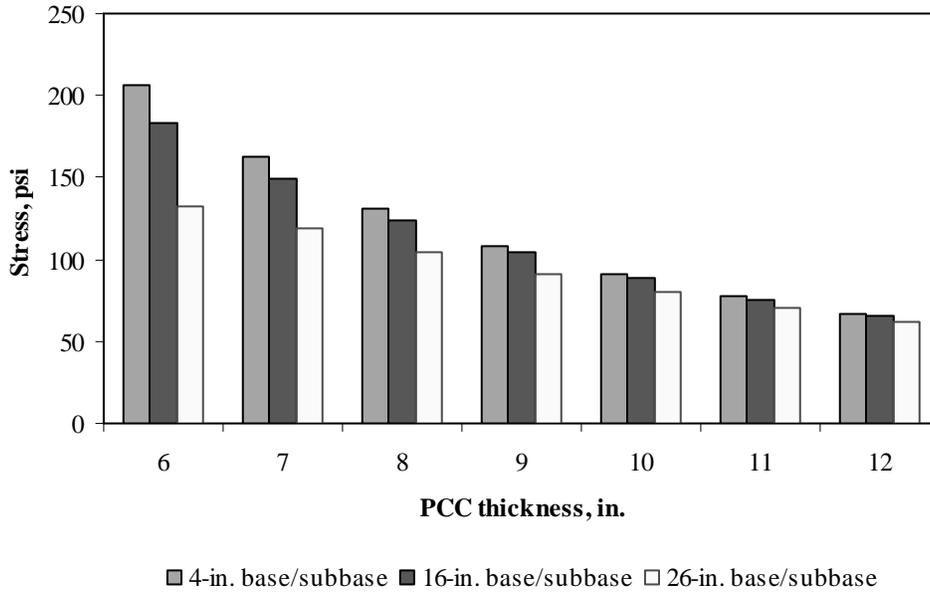

Figure F-2-10: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

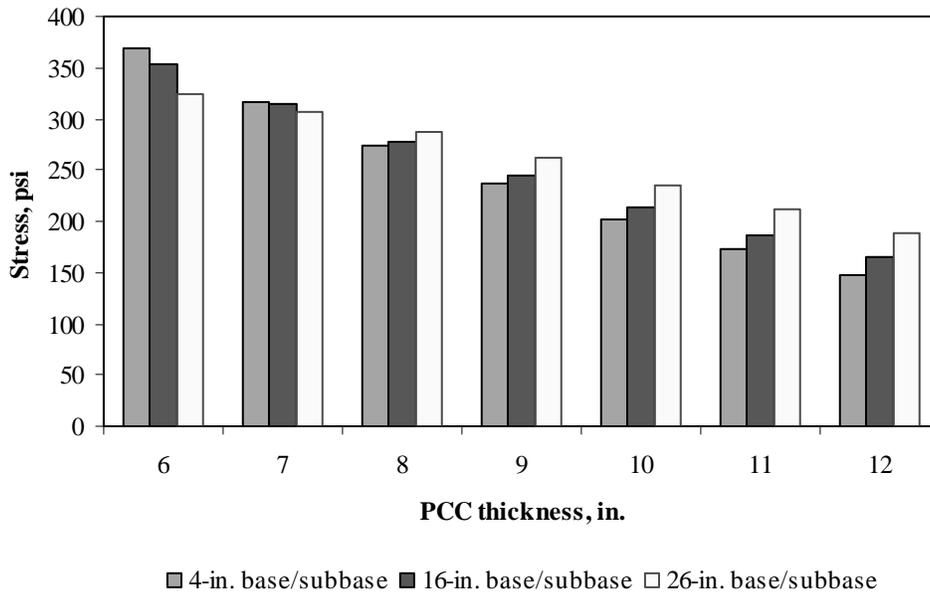

Figure F-2-11: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

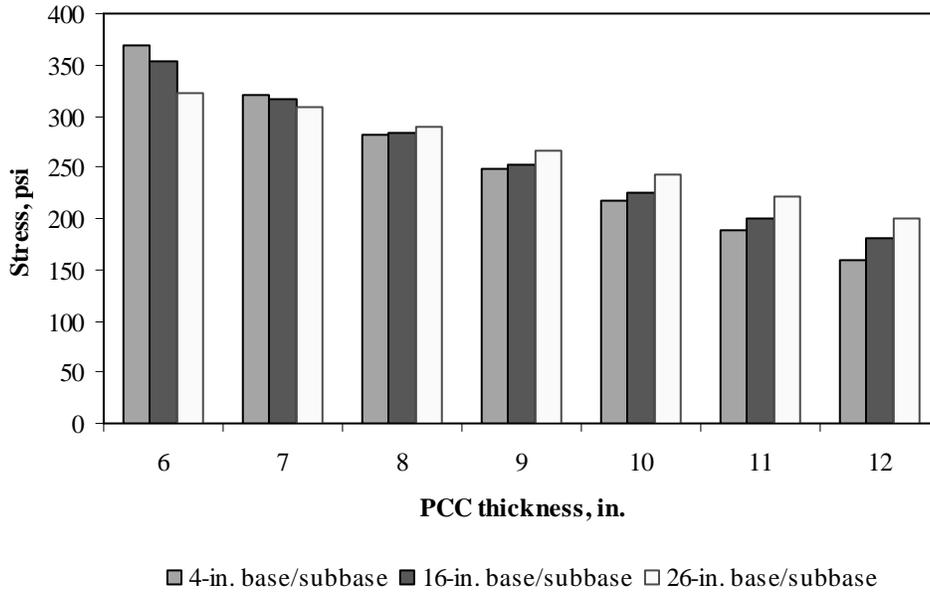

Figure F-2-12: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

Figures F-2-13 through F-2-24 illustrate the impact of PCC thickness and modulus of subgrade reaction on stresses (16-in. base/subbase thickness and PCC shoulder)

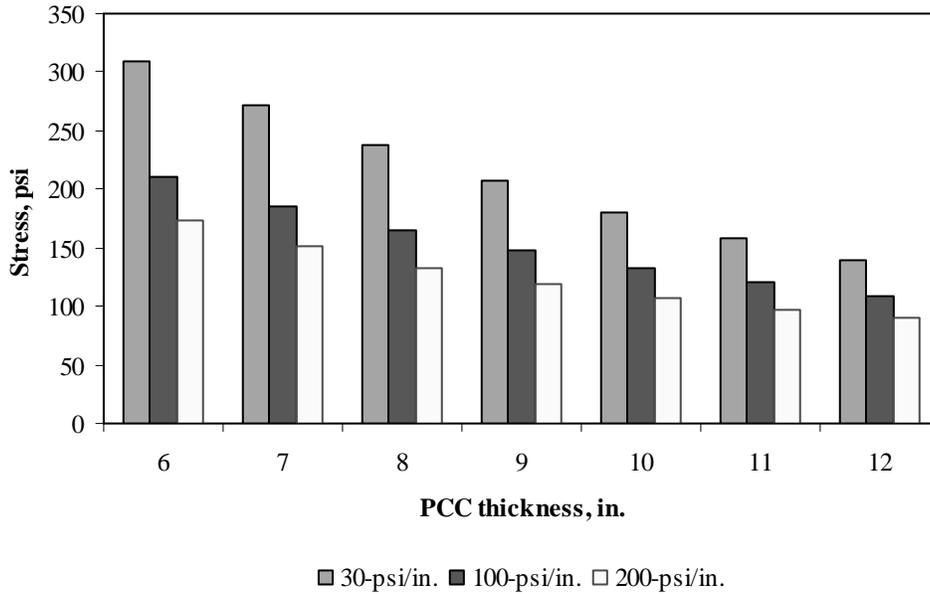

Figure F-2-13: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

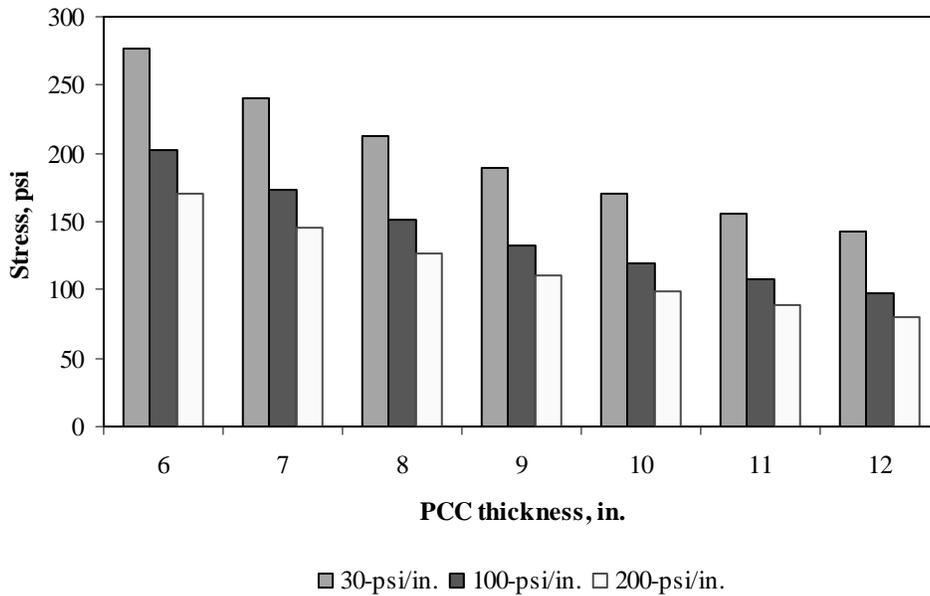

Figure F-2-14: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

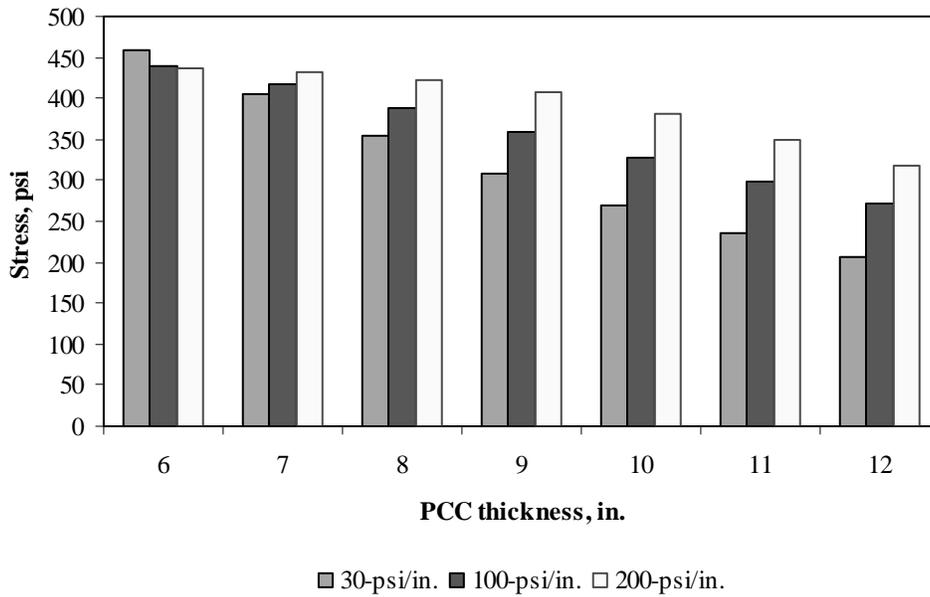

Figure F-2-15: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

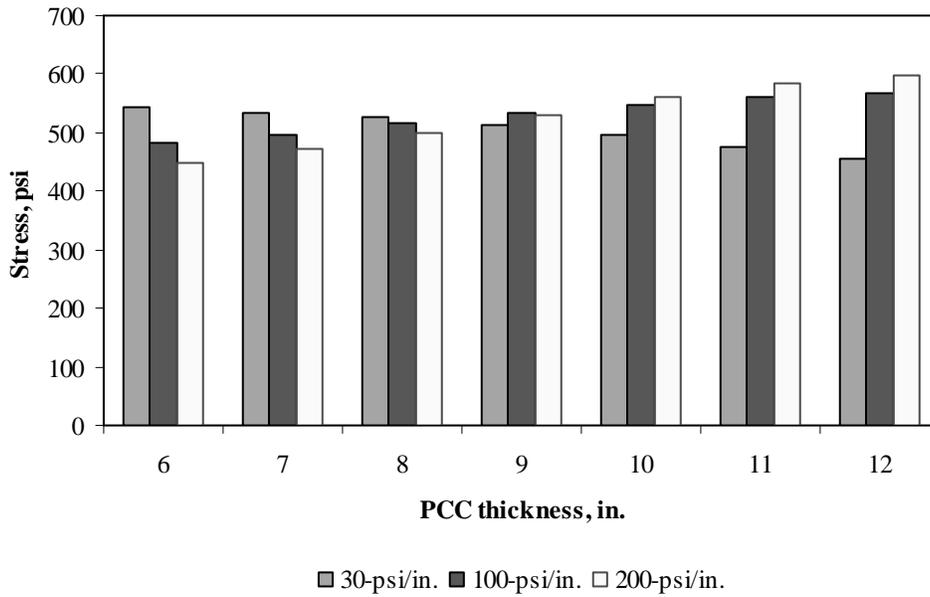

Figure F-2-16: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

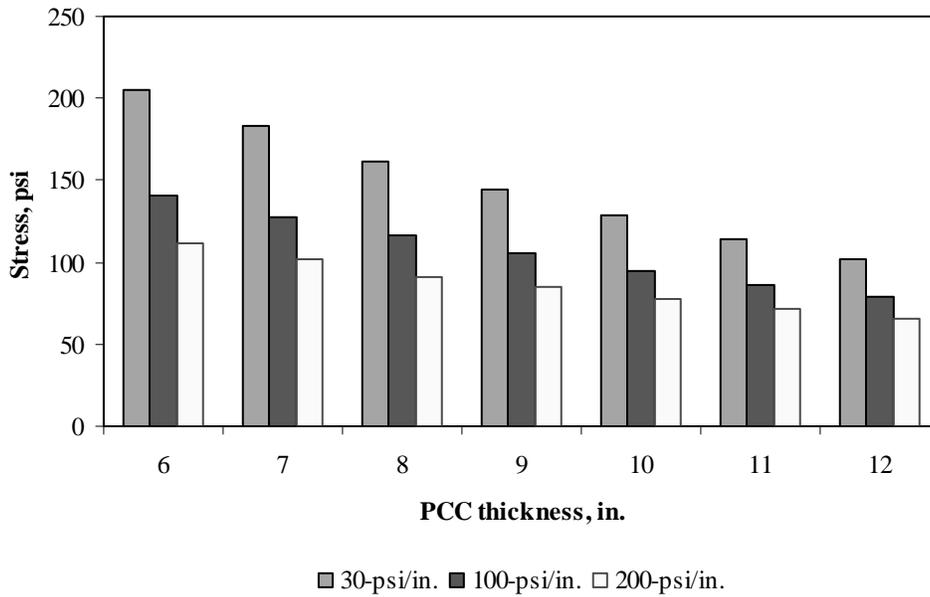

Figure F-2-17: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

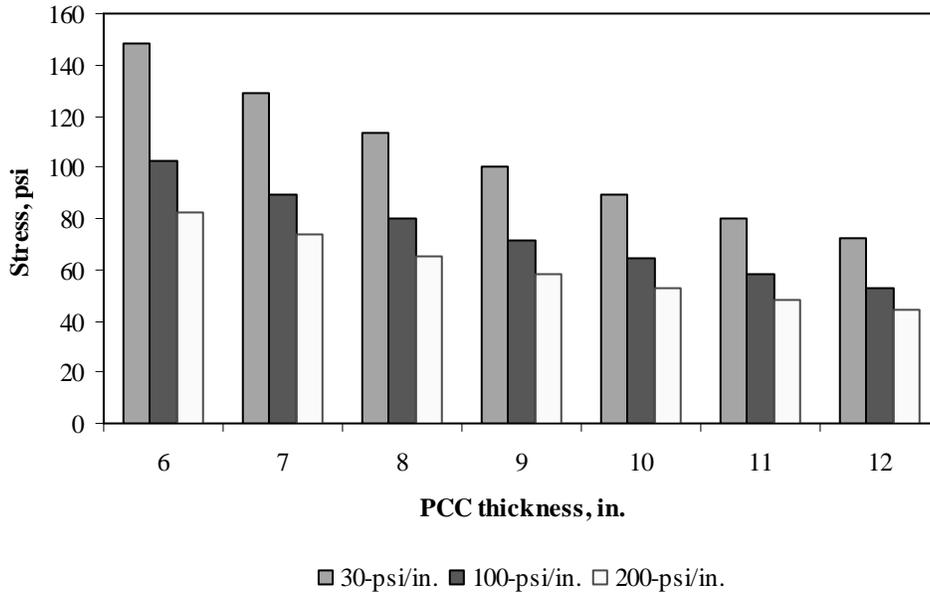

Figure F-2-18: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

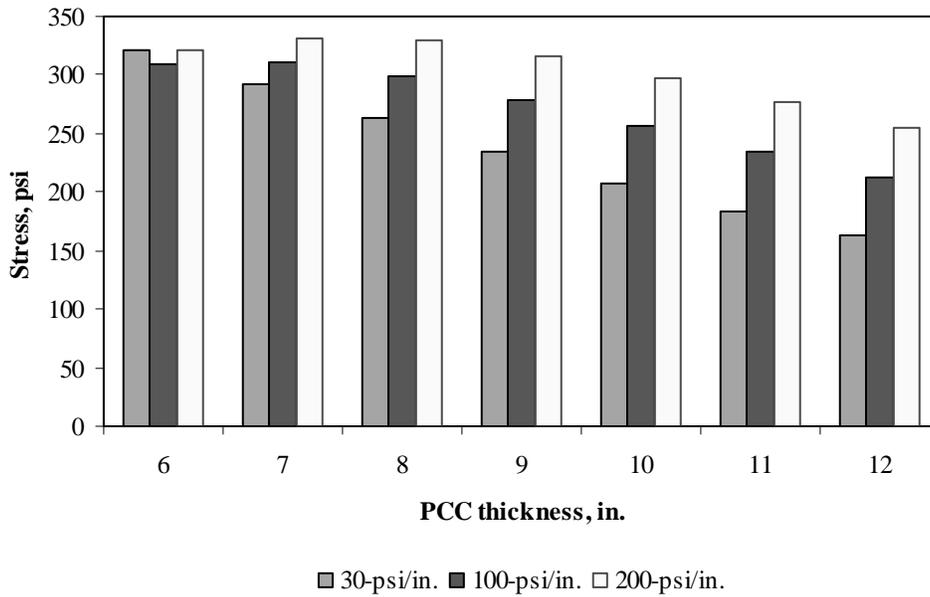

Figure F-2-19: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

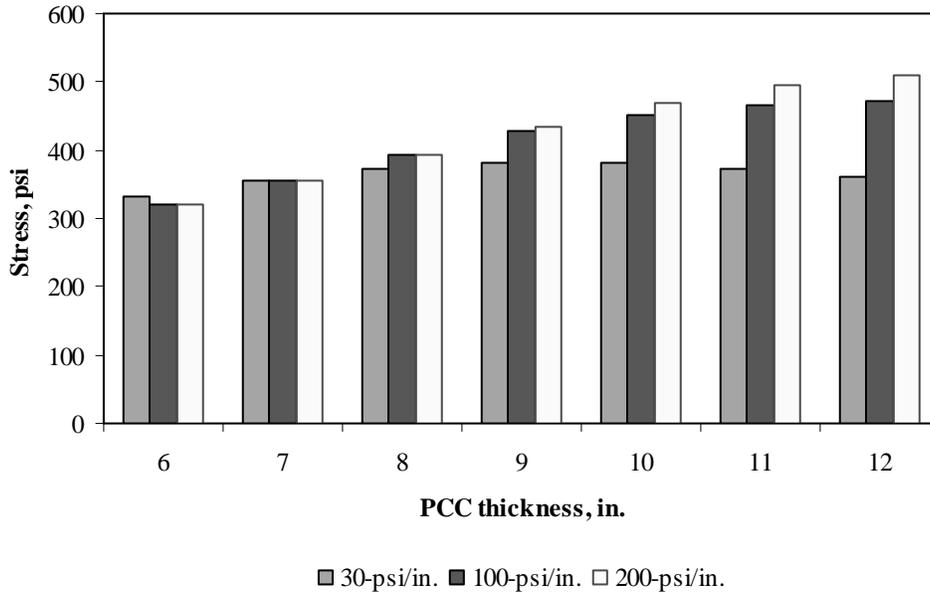

Figure F-2-20: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

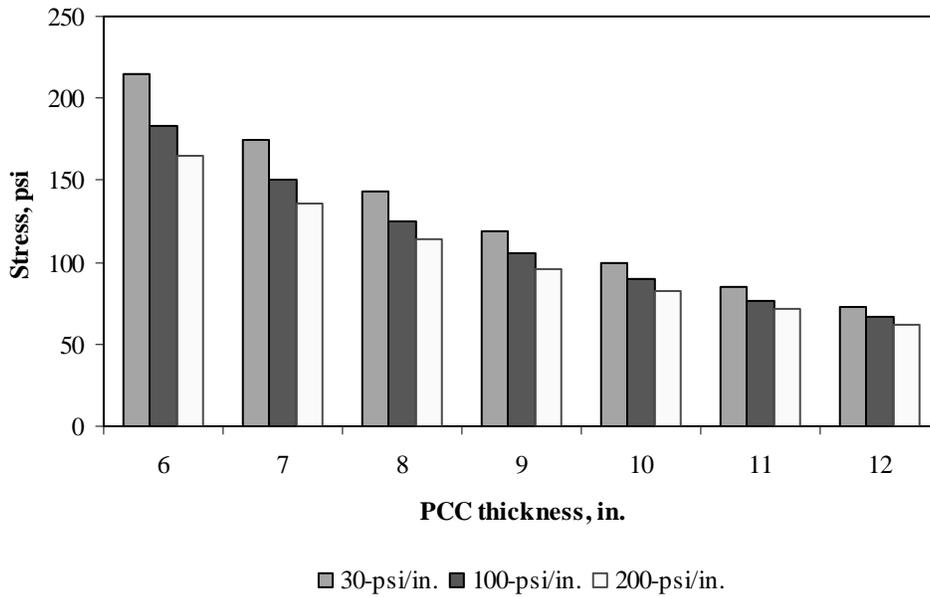

Figure F-2-21: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

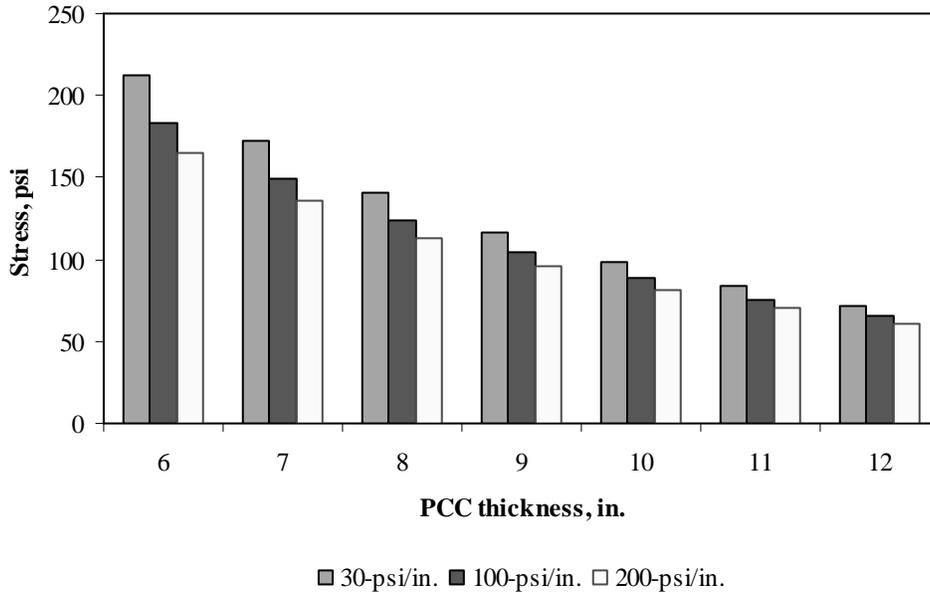

Figure F-2-22: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

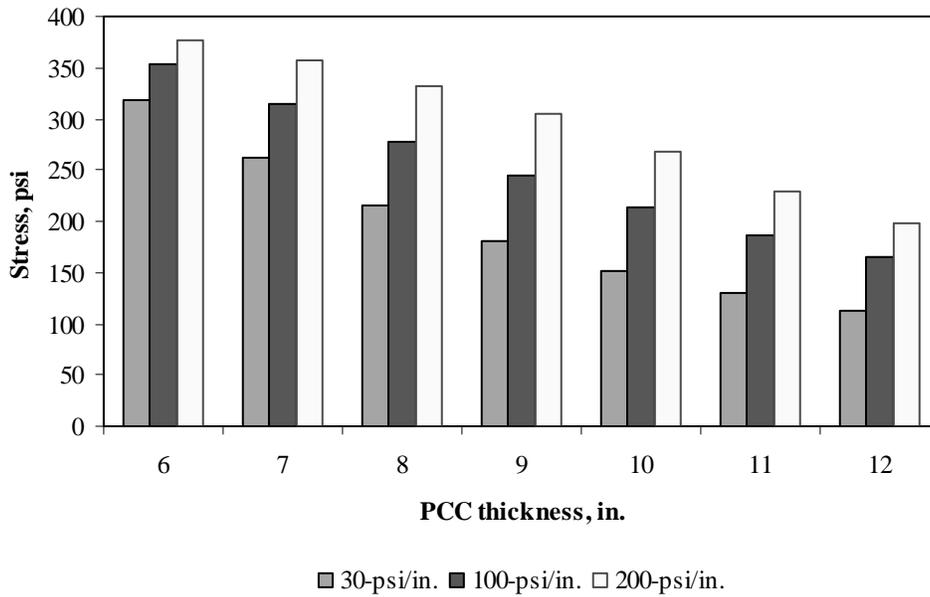

Figure F-2-23: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

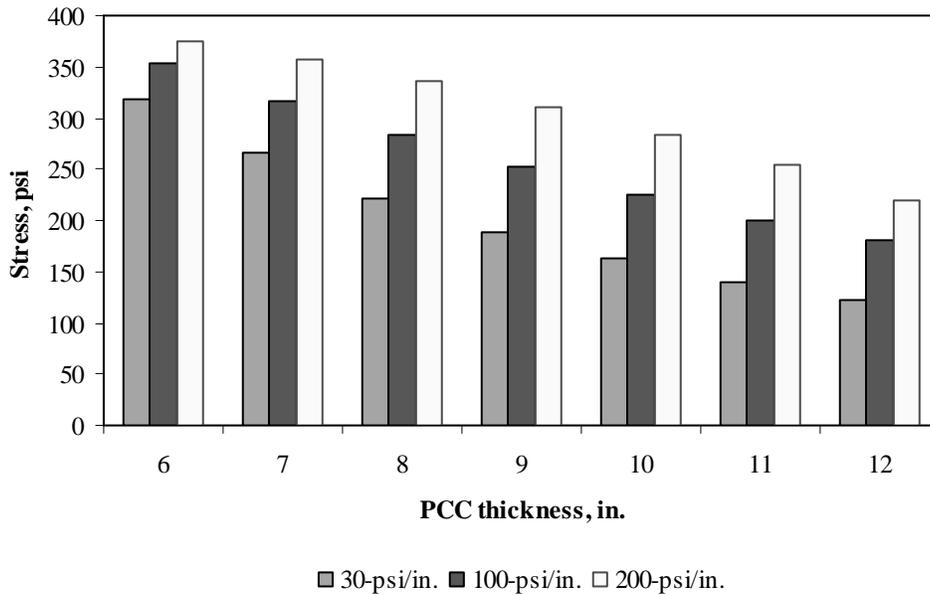

Figure F-2-24: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

Figures F-2-25 through F-2-36 illustrate the impact of PCC thickness and lateral support condition on stresses (16-in. base/subbase and 100-psi/in. modulus of subgrade reaction)

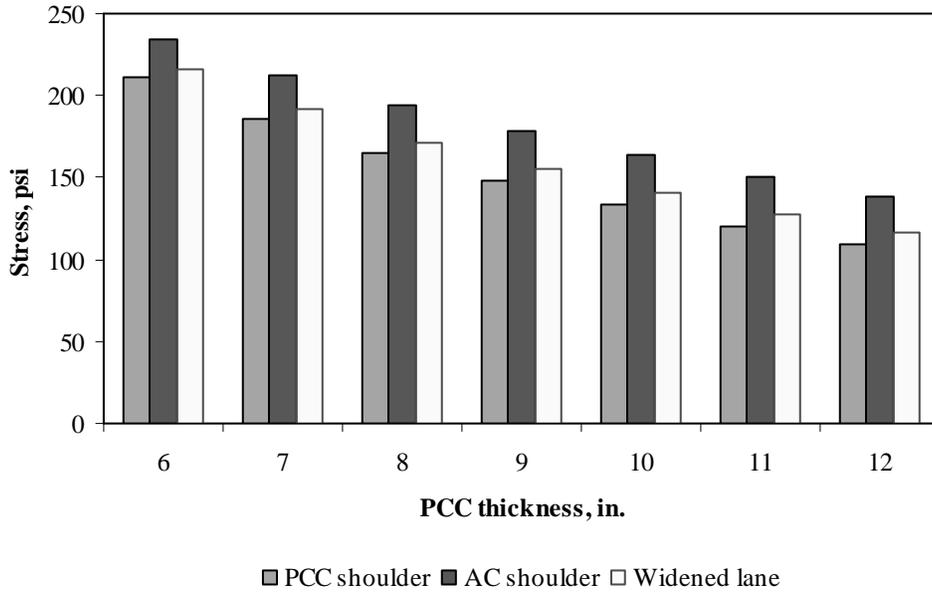

Figure F-2-25: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

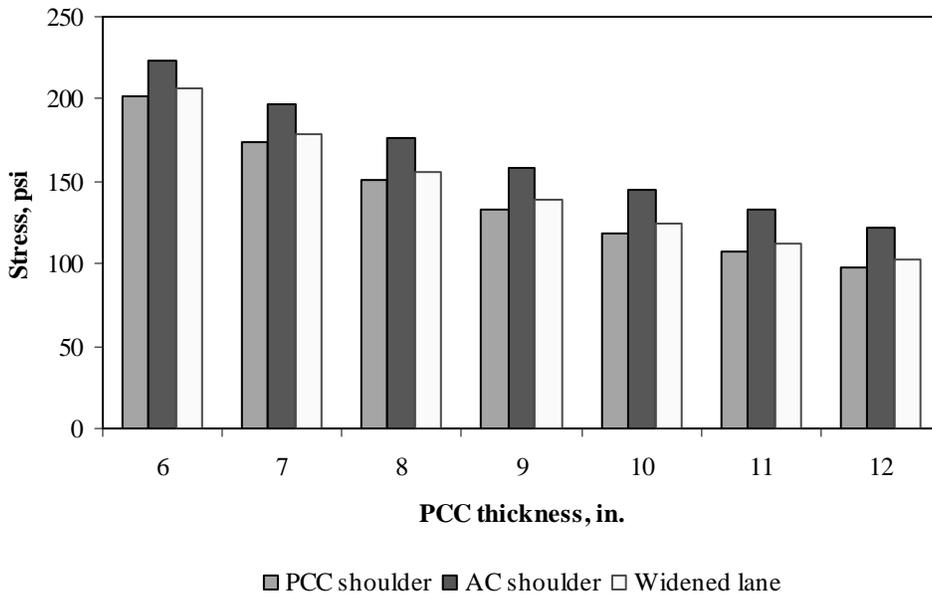

Figure F-2-26: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

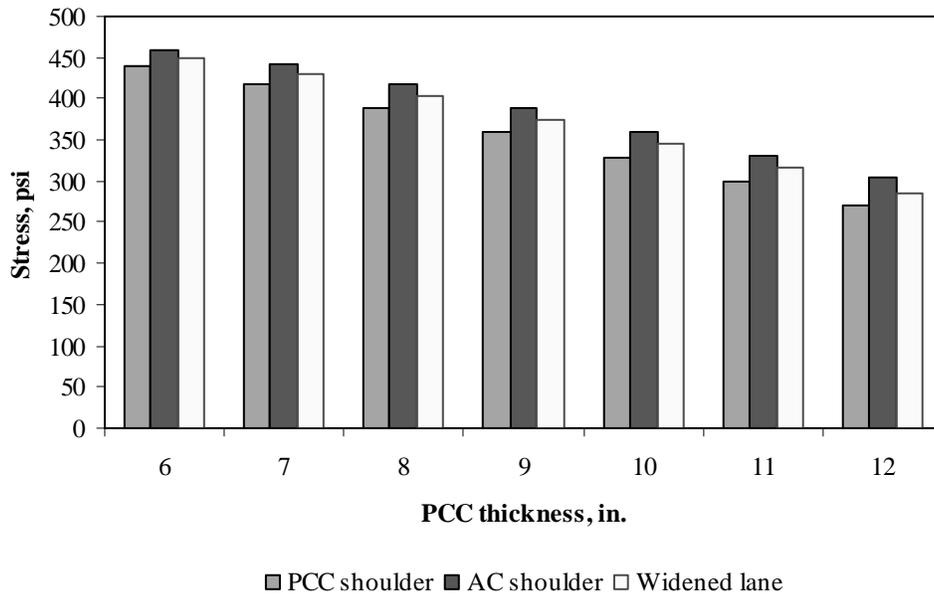

Figure F-2-27: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

Figure F-18-49: Impact of joint spacing and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab

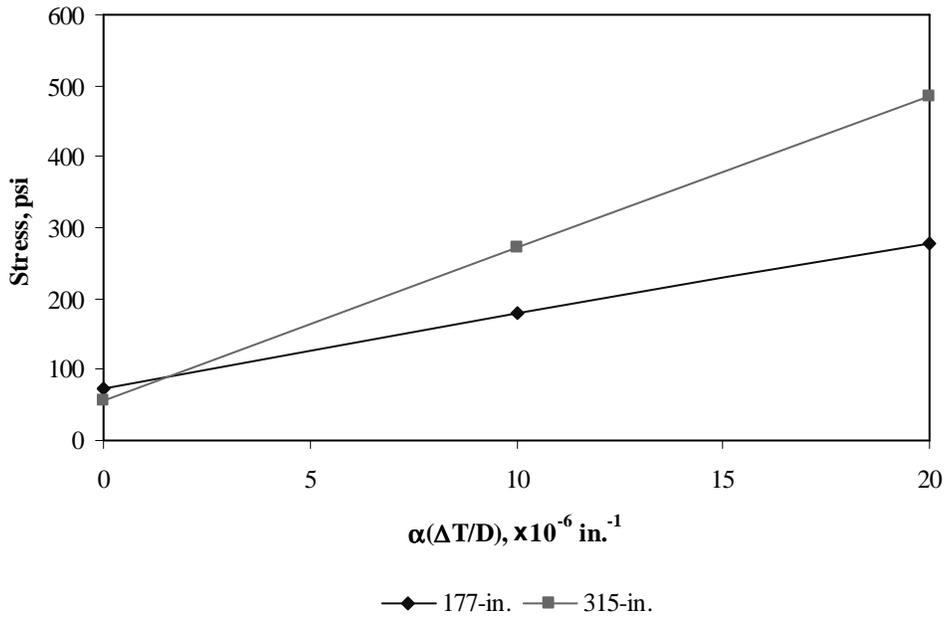

Figure F-18-50: Impact of joint spacing and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab

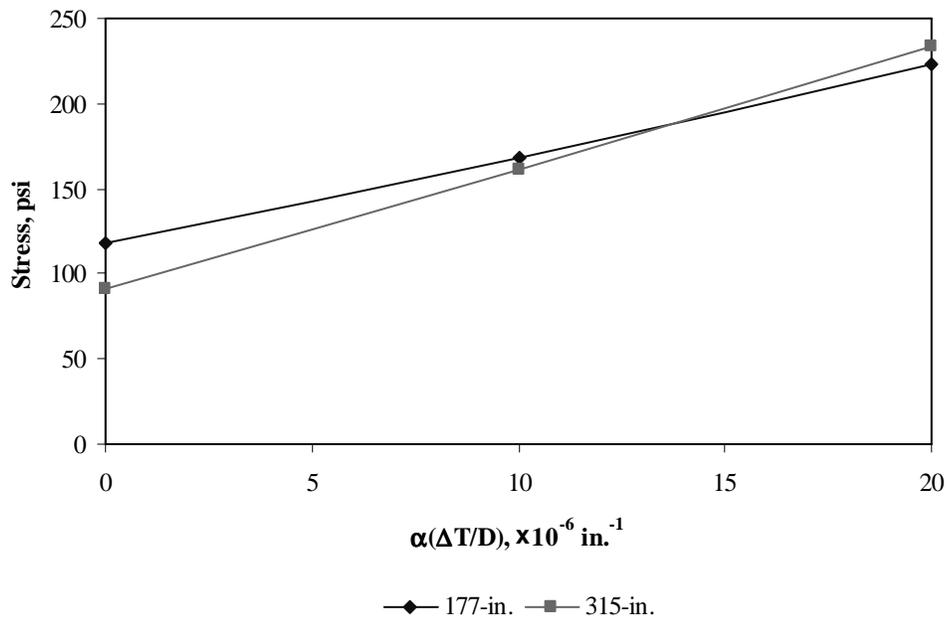

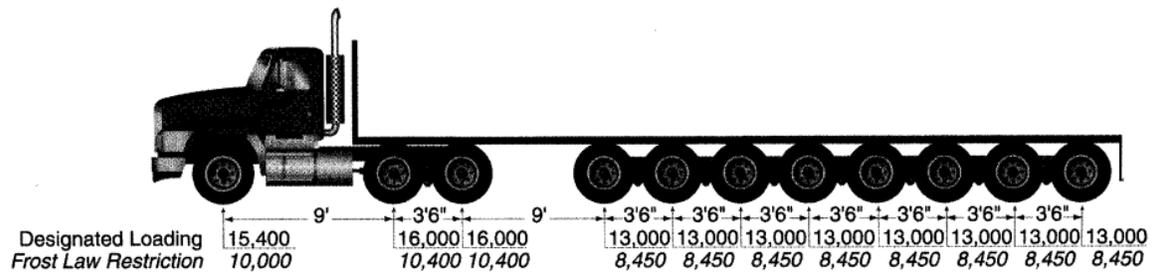

Figure F-18-51: Impact of joint spacing and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab

Sub Appendix F-19

Documentation of Pavement Responses for

MI-20

Figures F-19-1 through F-19-12 illustrate the impact of PCC thickness and base/subbase thickness on stresses (100-psi/in. modulus of subgrade reaction and PCC shoulder)

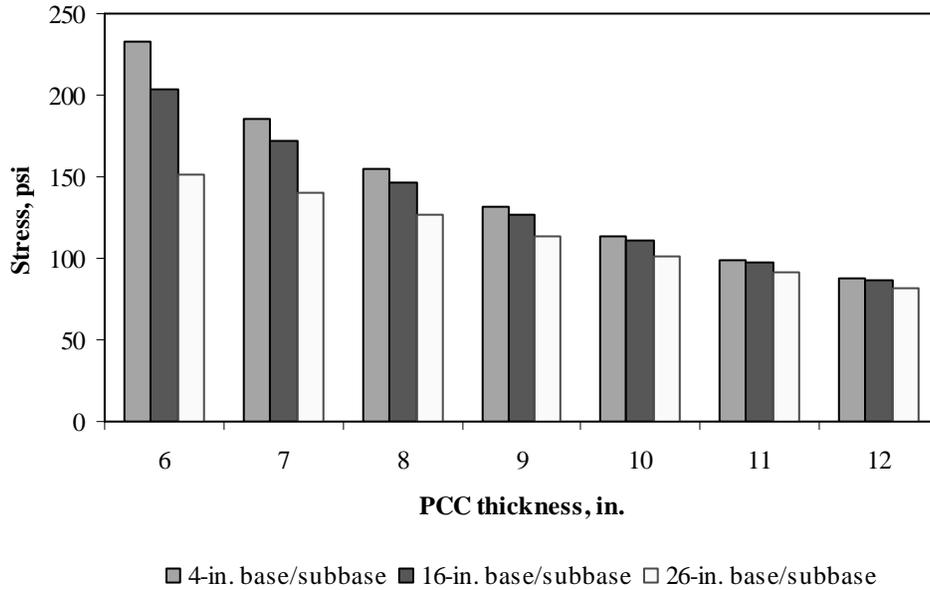

Figure F-19-1: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

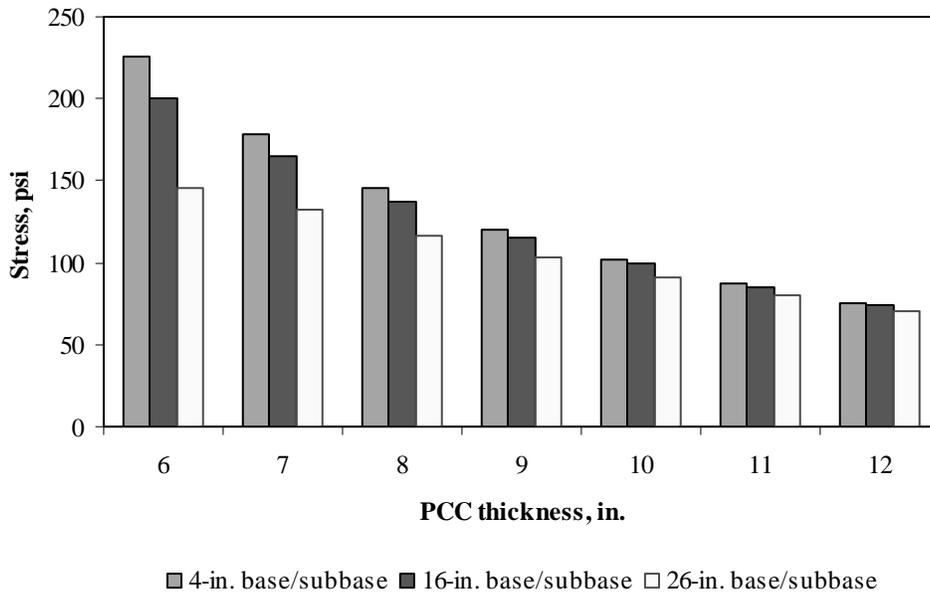

Figure F-19-2: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

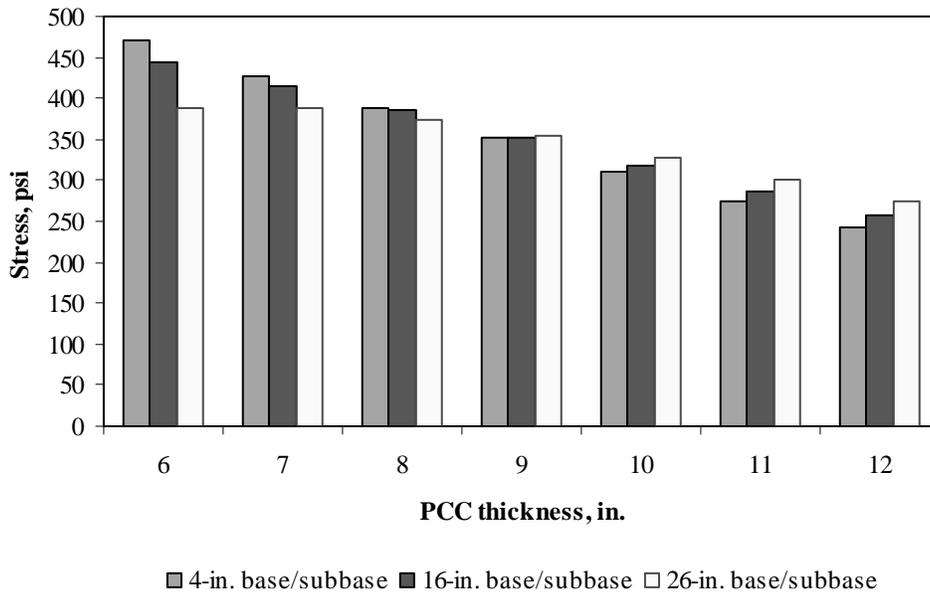

Figure F-19-3: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

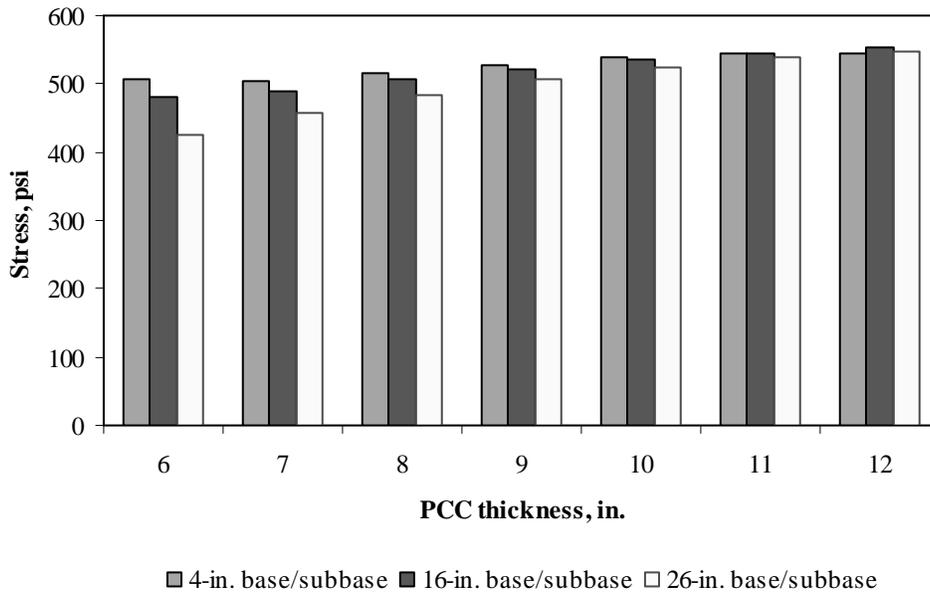

Figure F-19-4: Impact of PCC thickness and base/subbase thickness on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

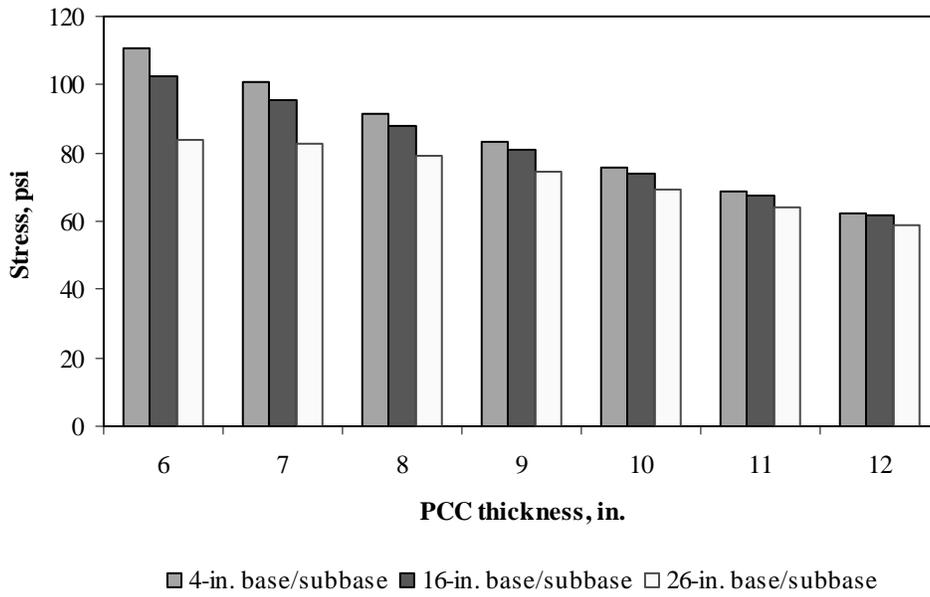

Figure F-19-5: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

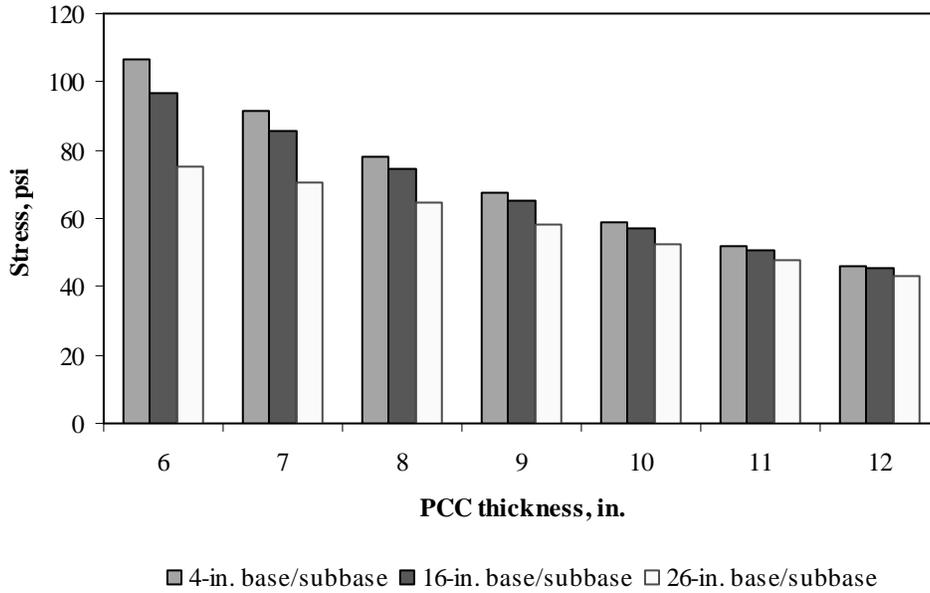

Figure F-19-6: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

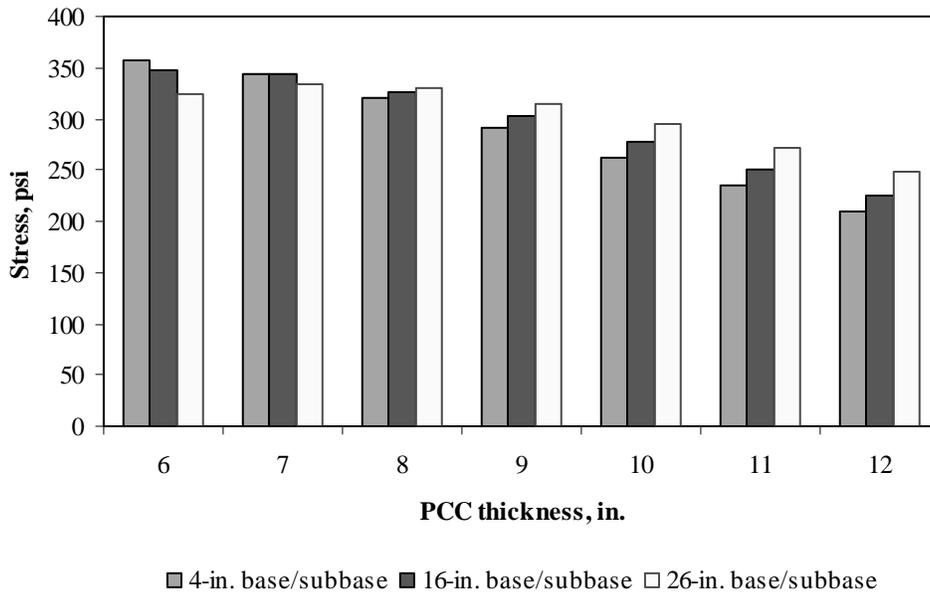

Figure F-19-7: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

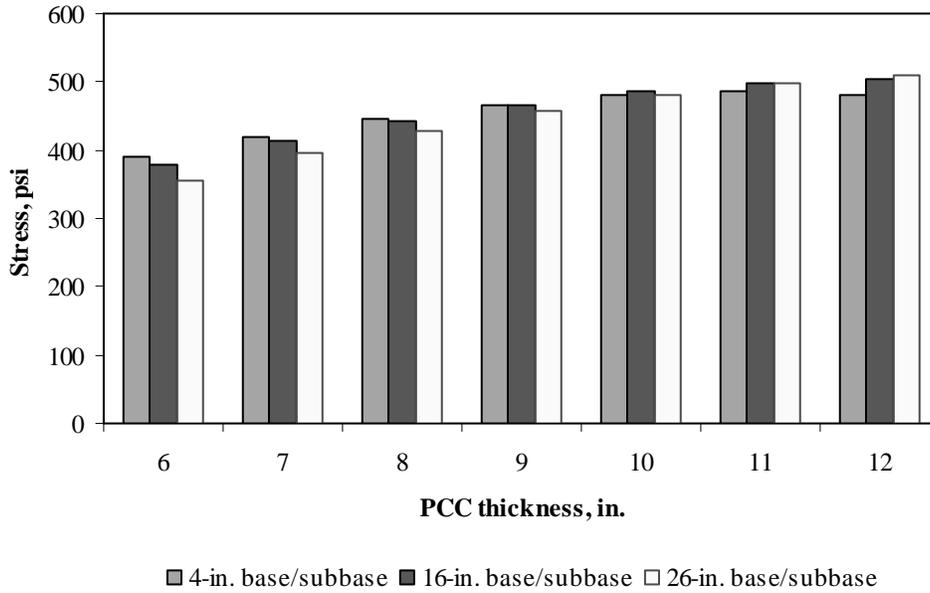

Figure F-19-8: Impact of PCC thickness and base/subbase thickness on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

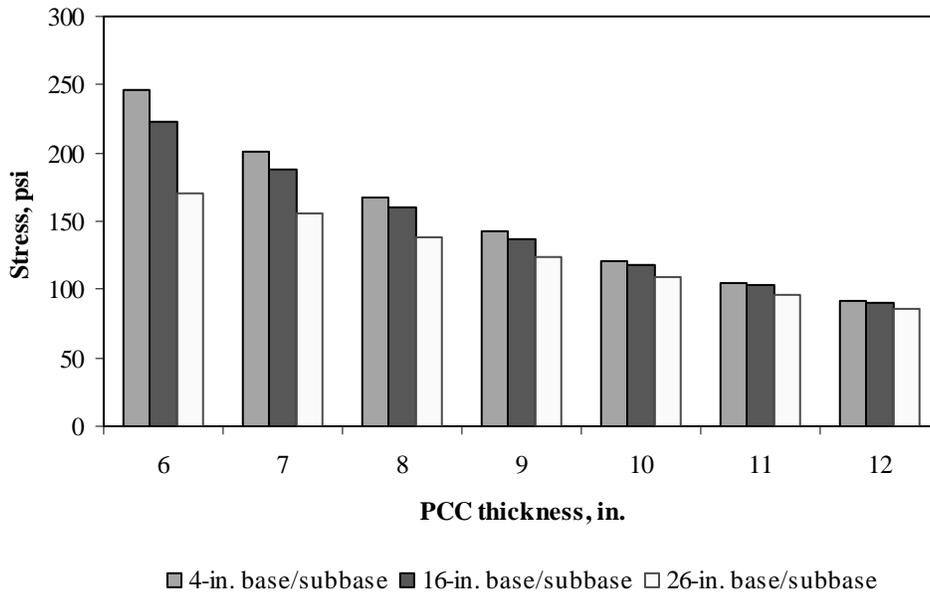

Figure F-19-9: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

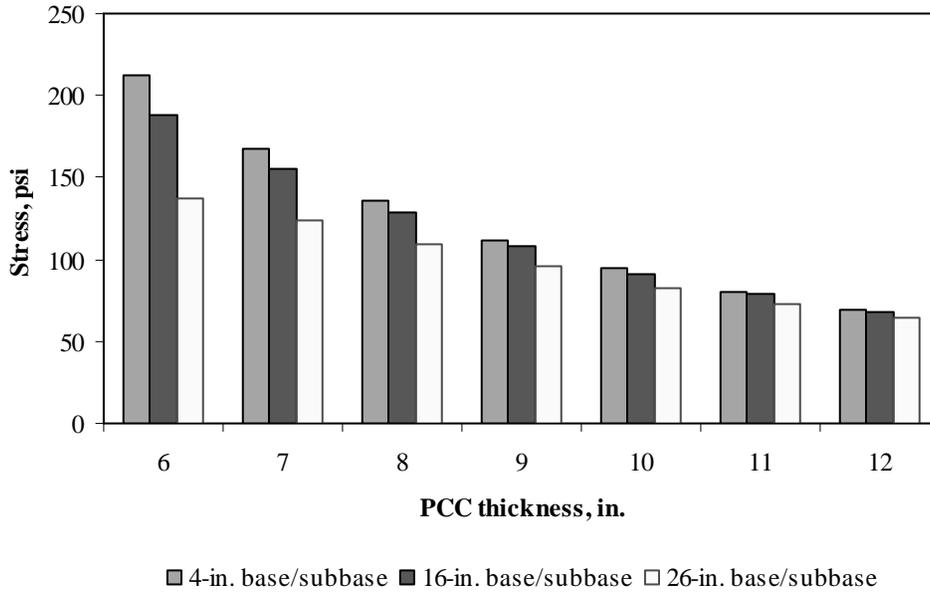

Figure F-19-10: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

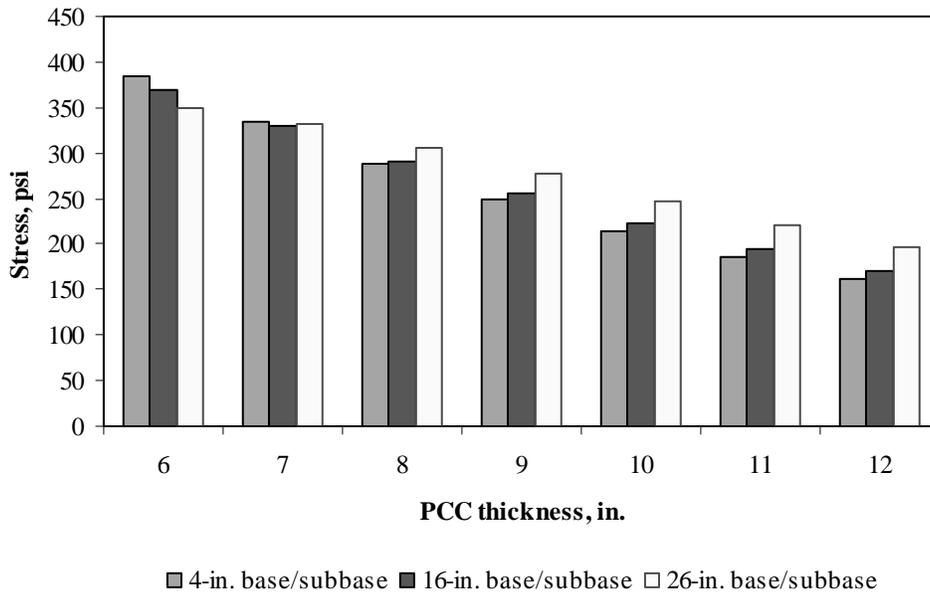

Figure F-19-11: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

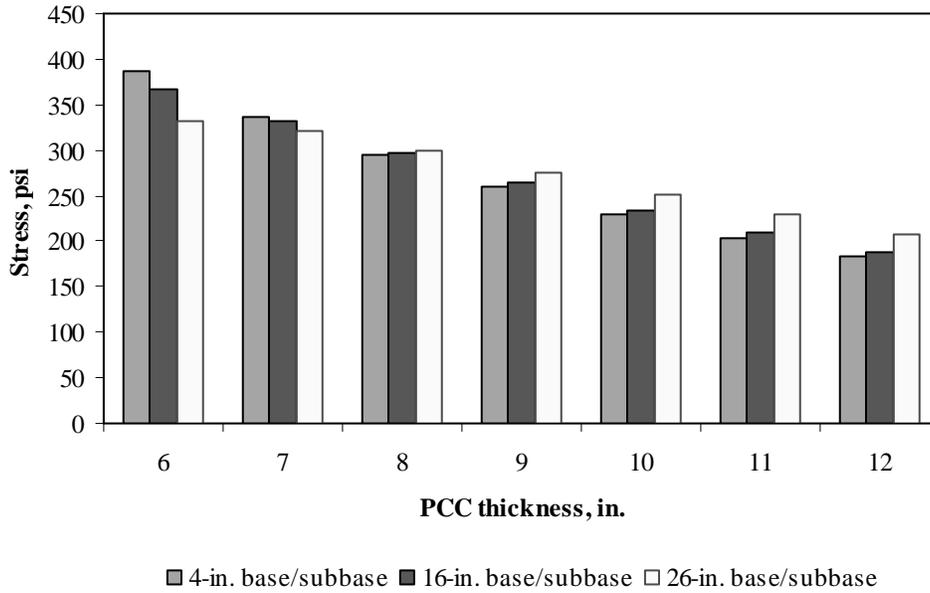

Figure F-19-12: Impact of PCC thickness and base/subbase thickness on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

Figures F-19-13 through F-19-24 illustrate the impact of PCC thickness and modulus of subgrade reaction on stresses (16-in. base/subbase thickness and PCC shoulder)

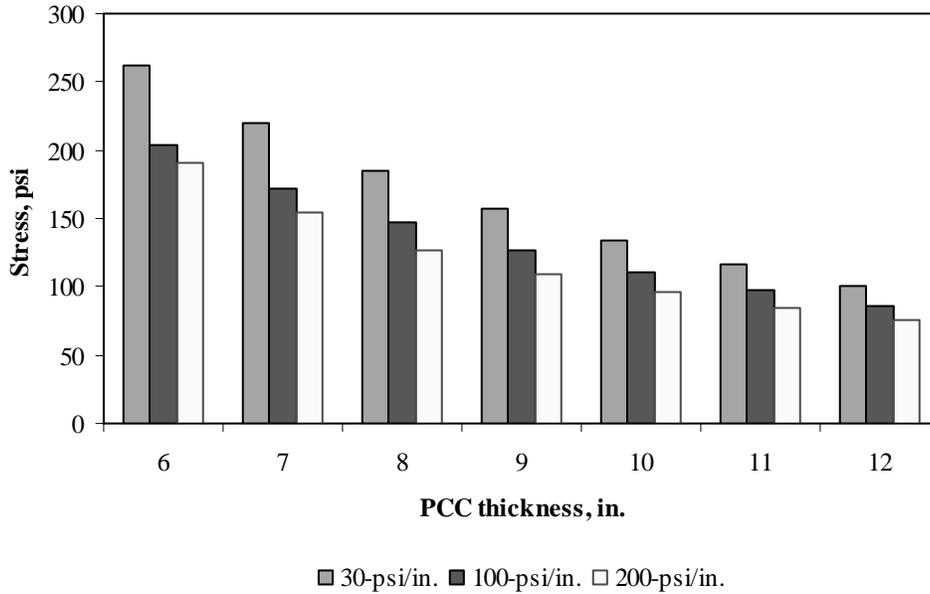

Figure F-19-13: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

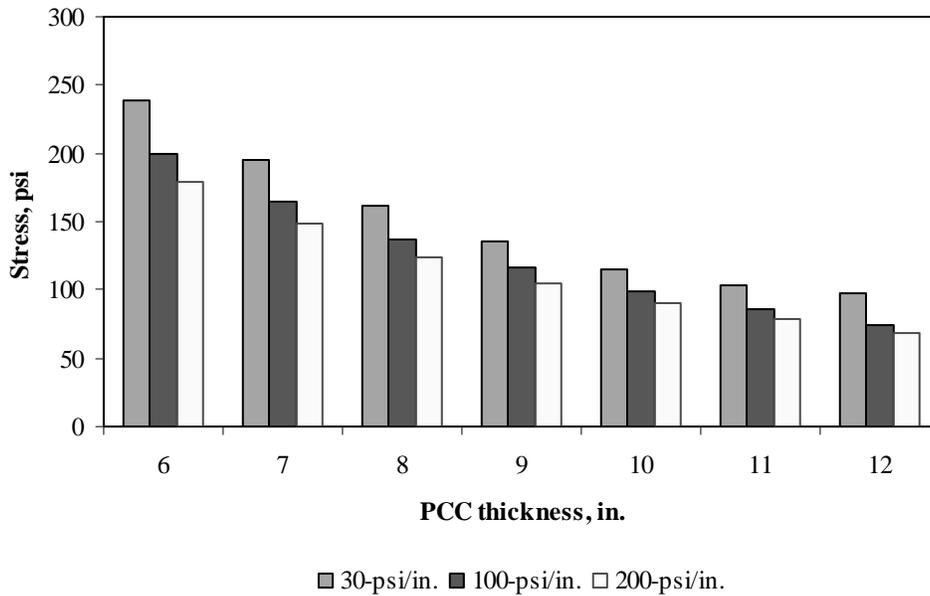

Figure F-19-14: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

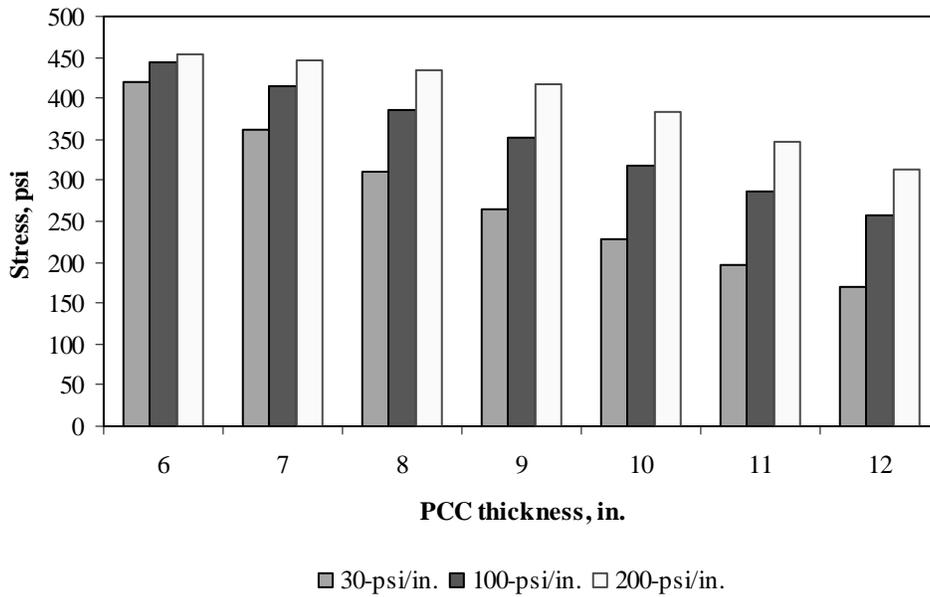

Figure F-19-15: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

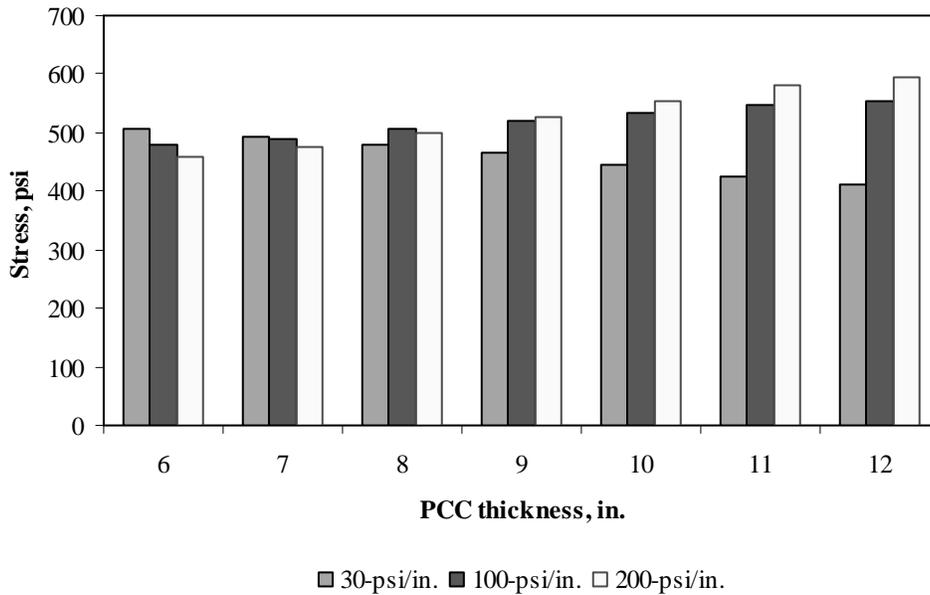

Figure F-19-16: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at bottom of the slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

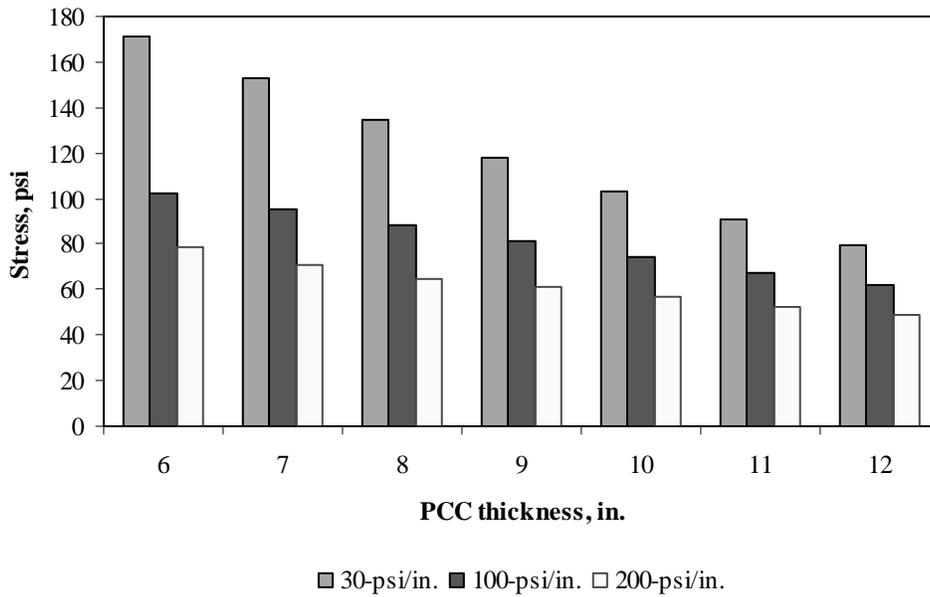

Figure F-19-17: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

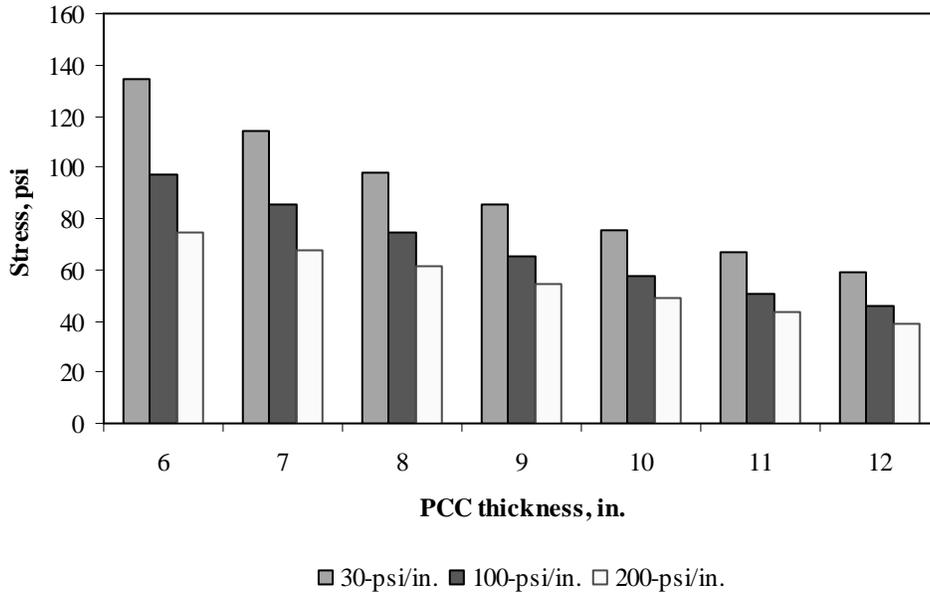

Figure F-19-19: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

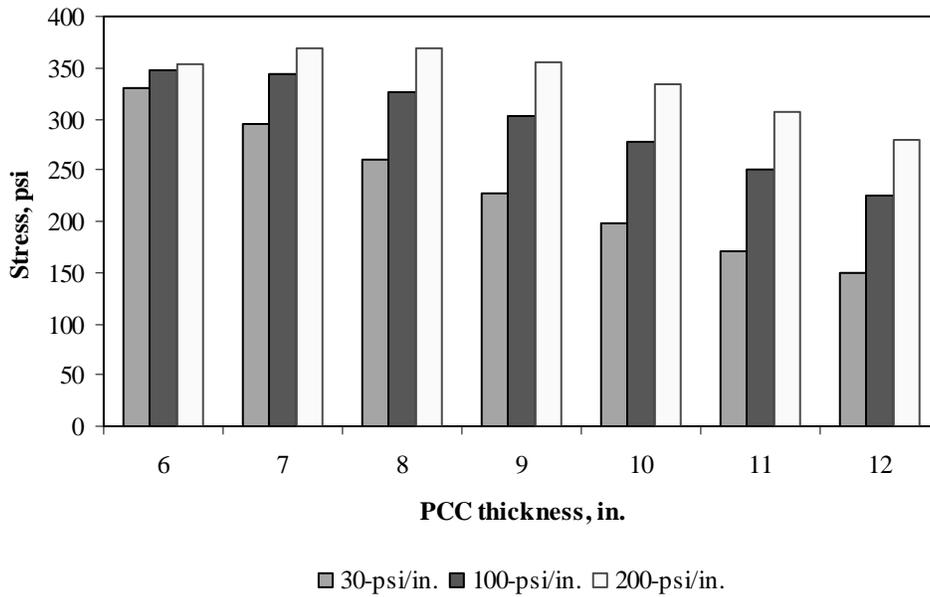

Figure F-19-19: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

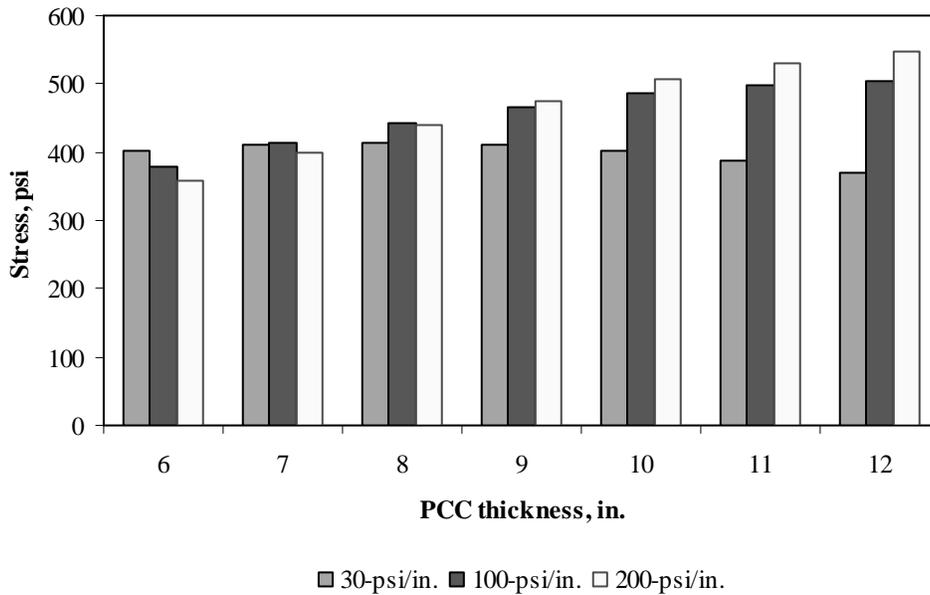

Figure F-19-20: Impact of PCC thickness and modulus of subgrade reaction on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

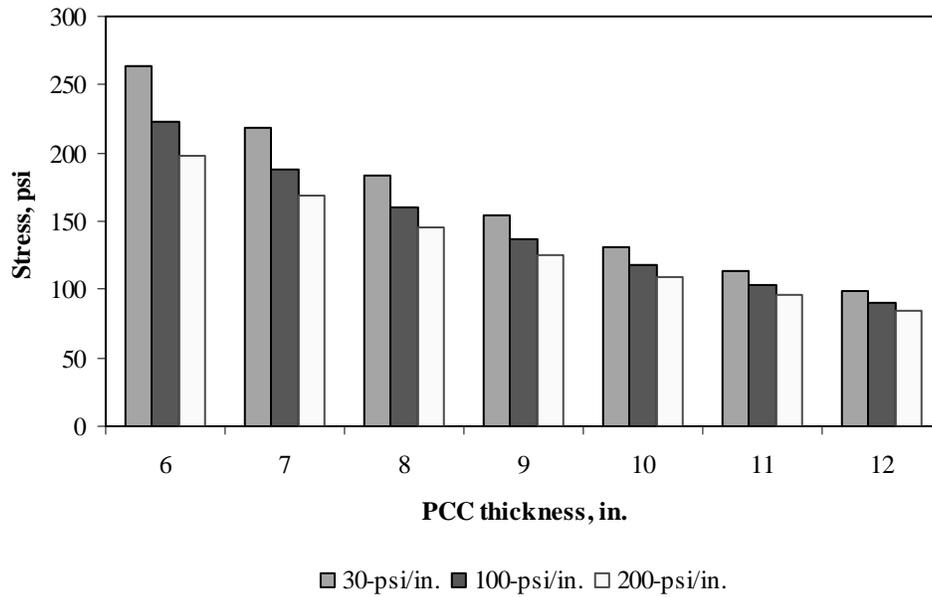

Figure F-19-21: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

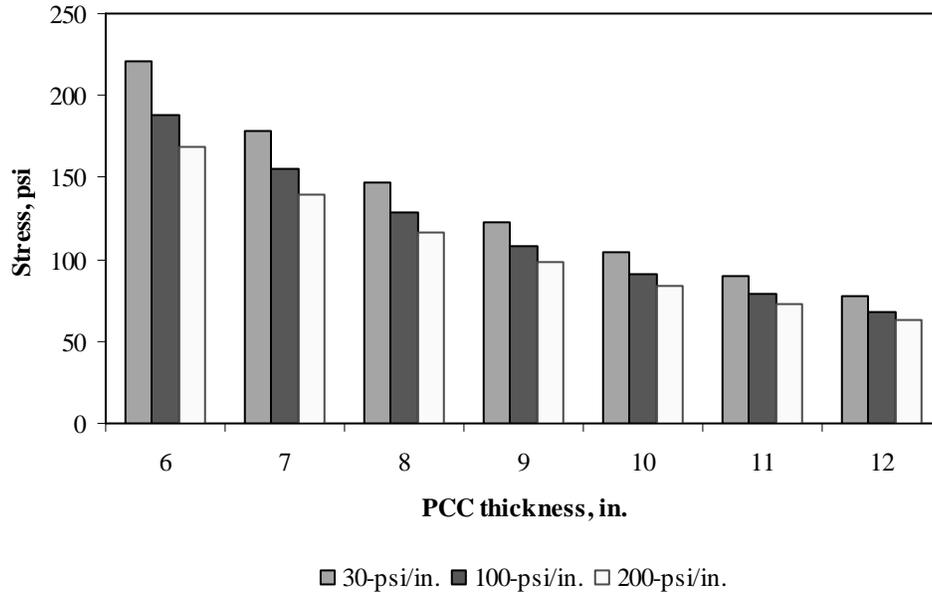

Figure F-19-22: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

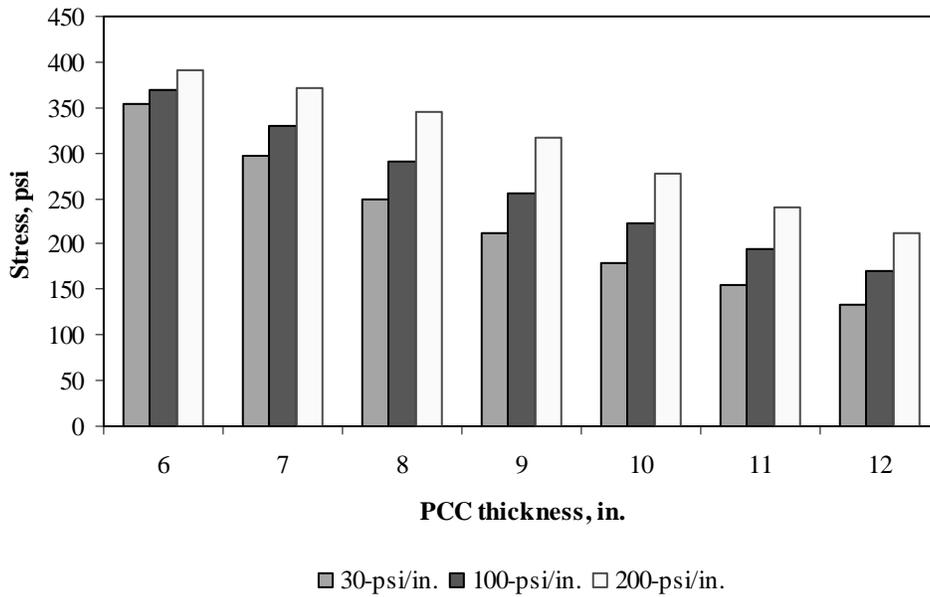

Figure F-19-23: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

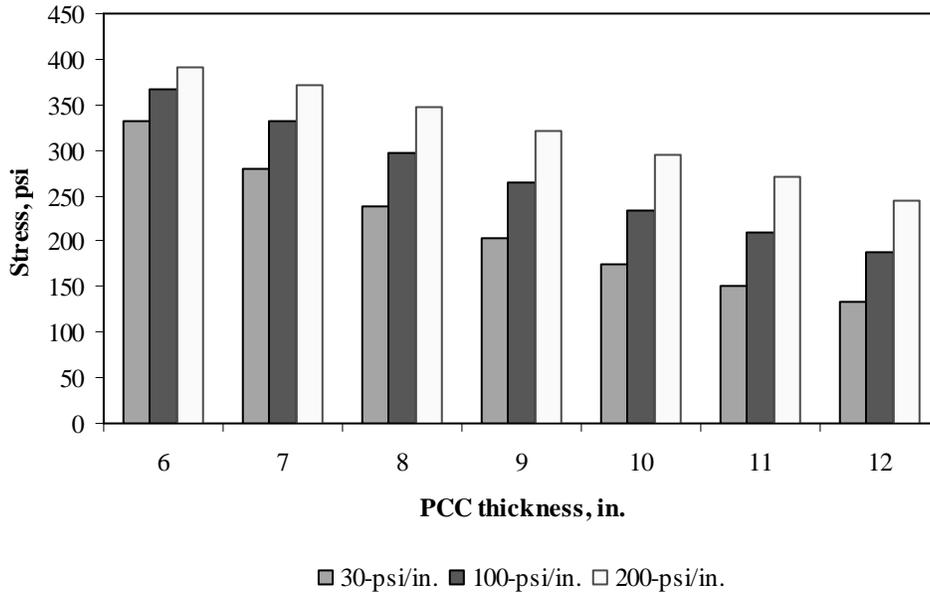

Figure F-19-24: Impact of PCC thickness and modulus of subgrade reaction on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

Figures F-19-25 through F-19-36 illustrate the impact of PCC thickness and lateral support condition on stresses (16-in. base/subbase and 100-psi/in. modulus of subgrade reaction)

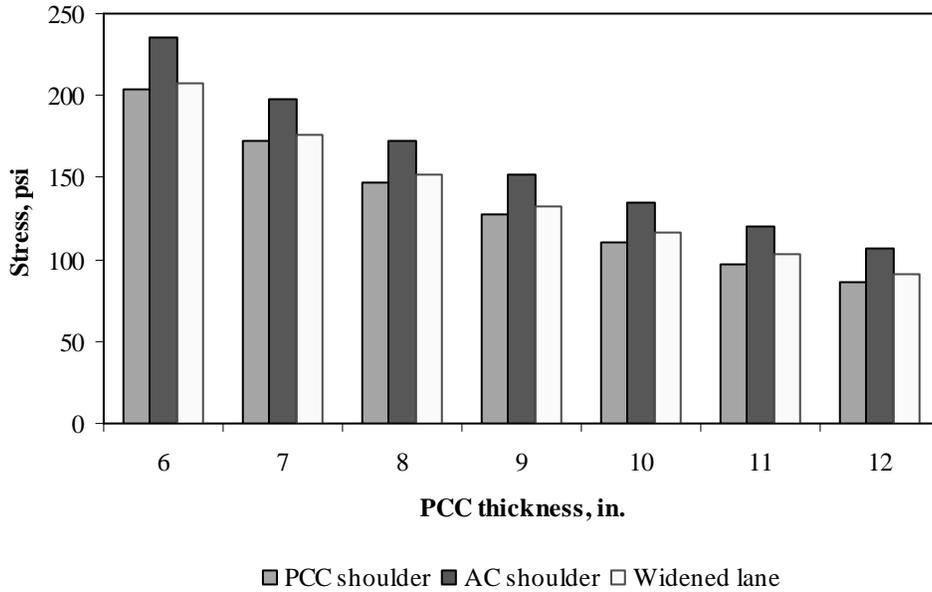

Figure F-19-25: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

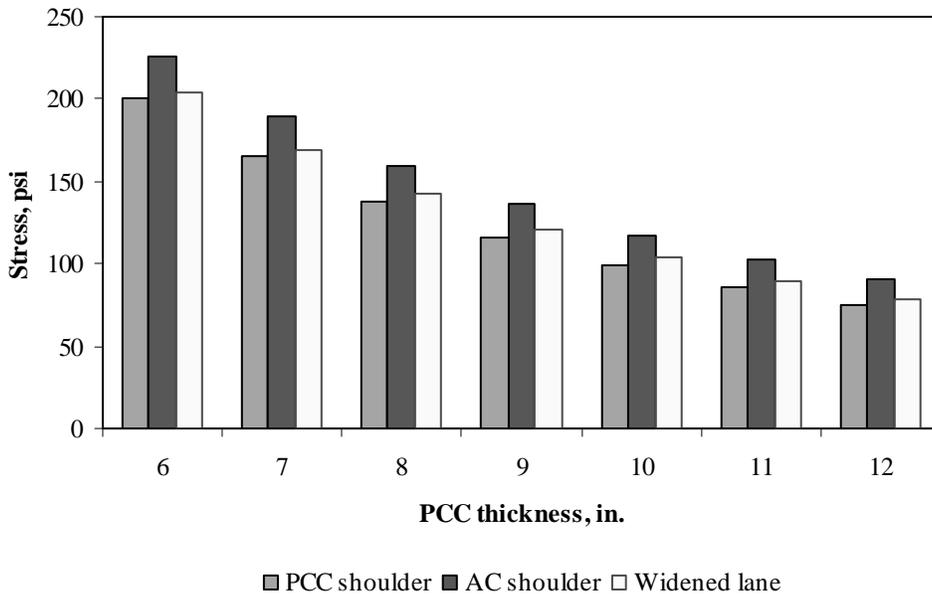

Figure F-19-26: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

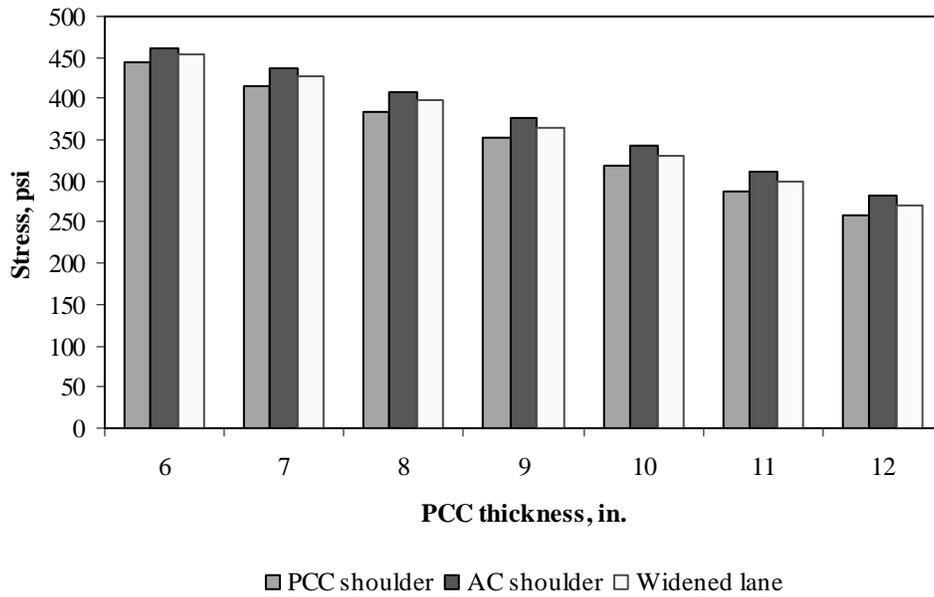

Figure F-19-27: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

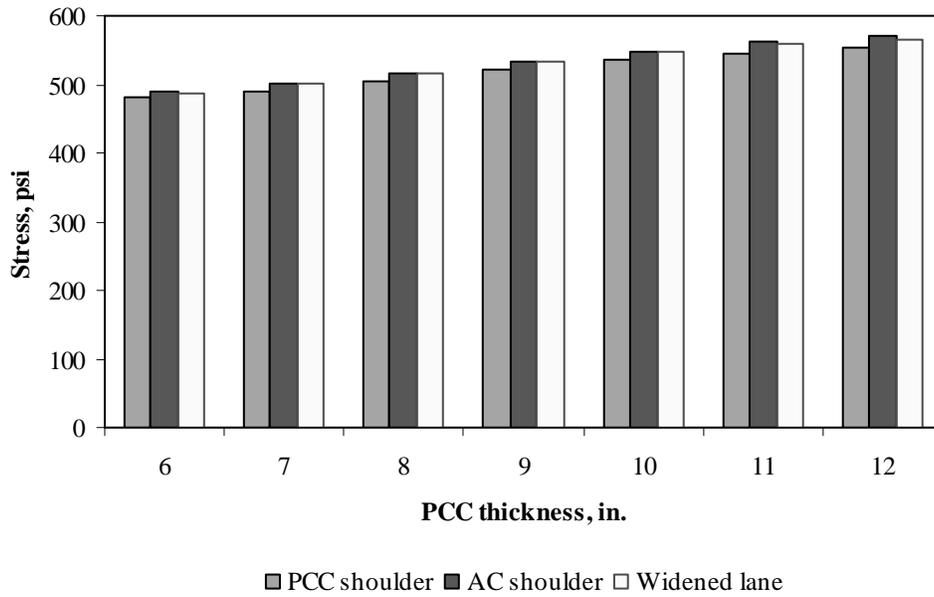

Figure F-19-28: Impact of PCC thickness and lateral support condition on longitudinal stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

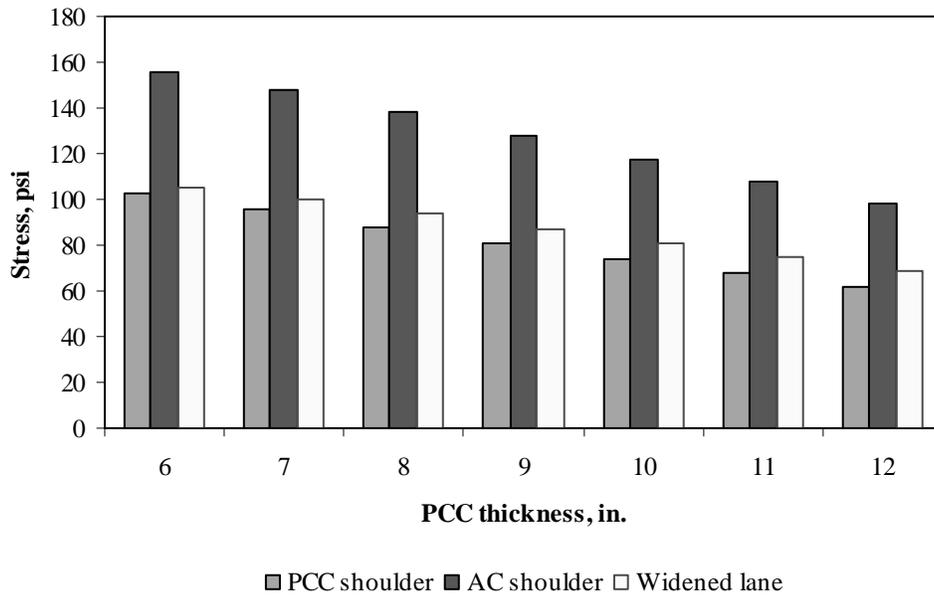

Figure F-19-29: Impact of PCC thickness and lateral support condition on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

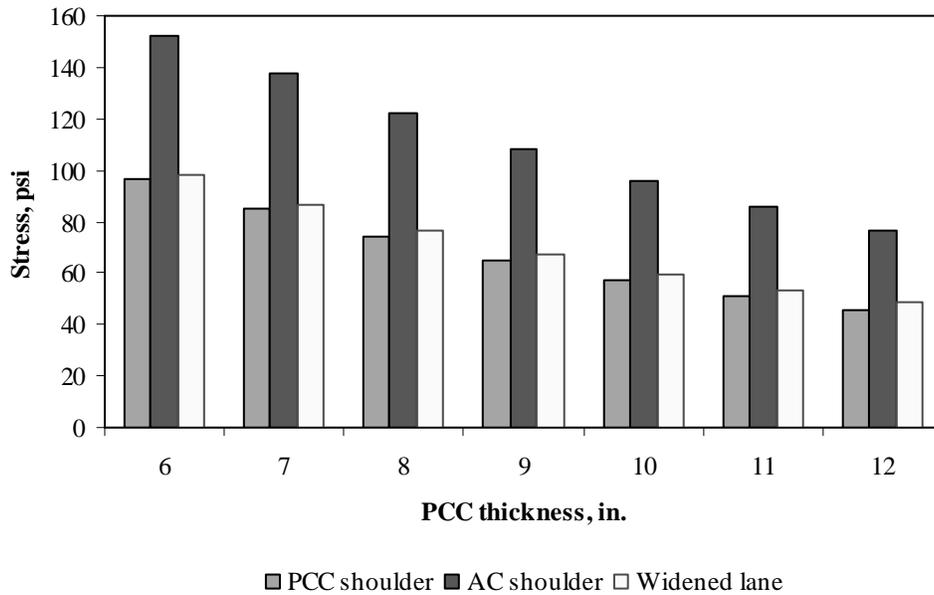

Figure F-19-30: Impact of PCC thickness and lateral support condition on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

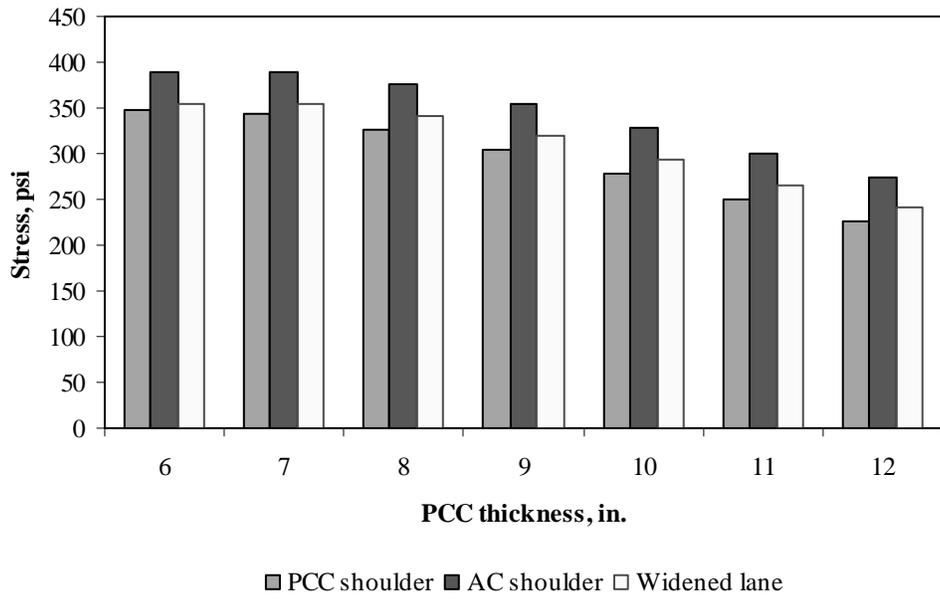

Figure F-19-31: Impact of PCC thickness and lateral support condition on longitudinal stress at top of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

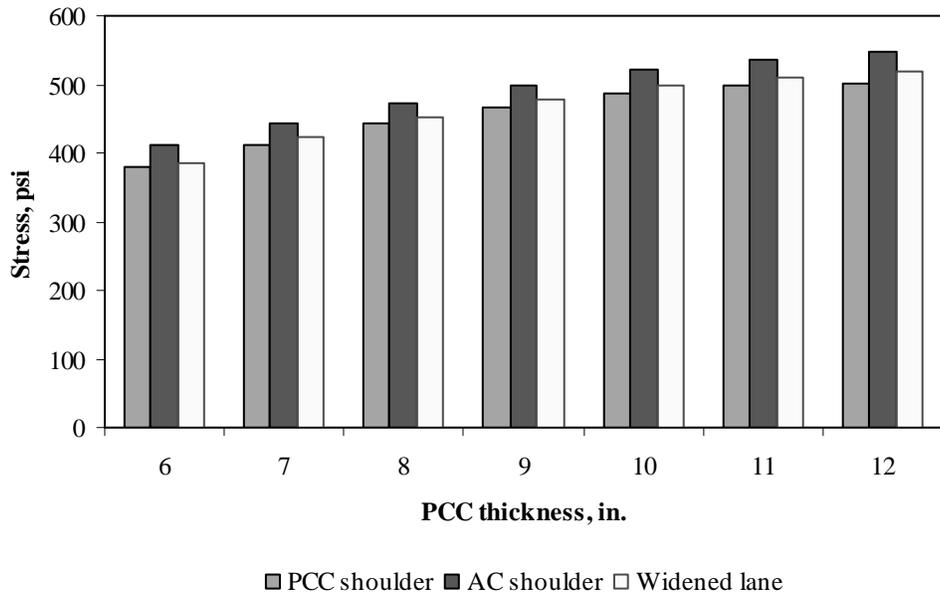

Figure F-19-32: Impact of PCC thickness and lateral support condition on longitudinal stress at top of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $-20 \times 10^{-6} \text{ in.}^{-1}$)

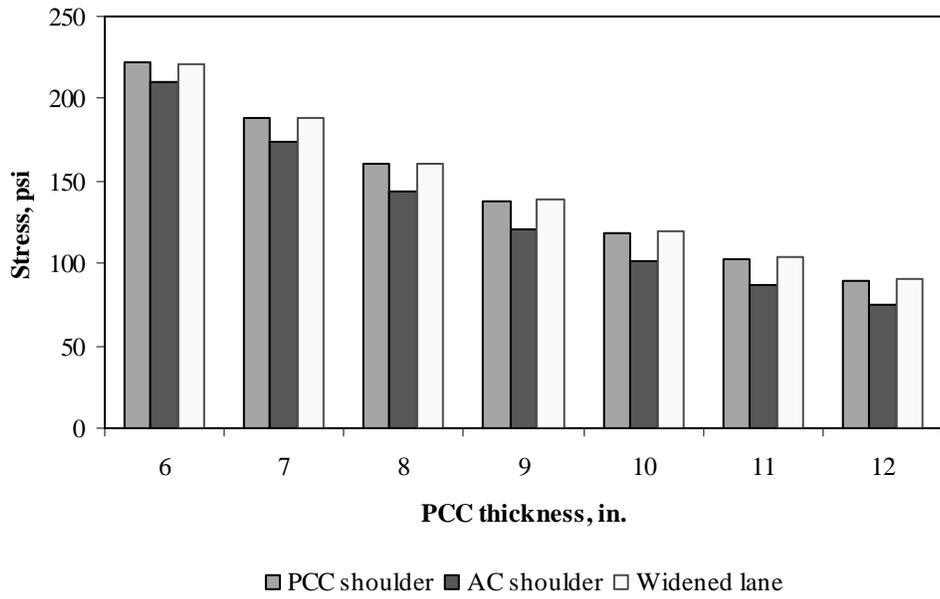

Figure F-19-33: Impact of PCC thickness and lateral support condition on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

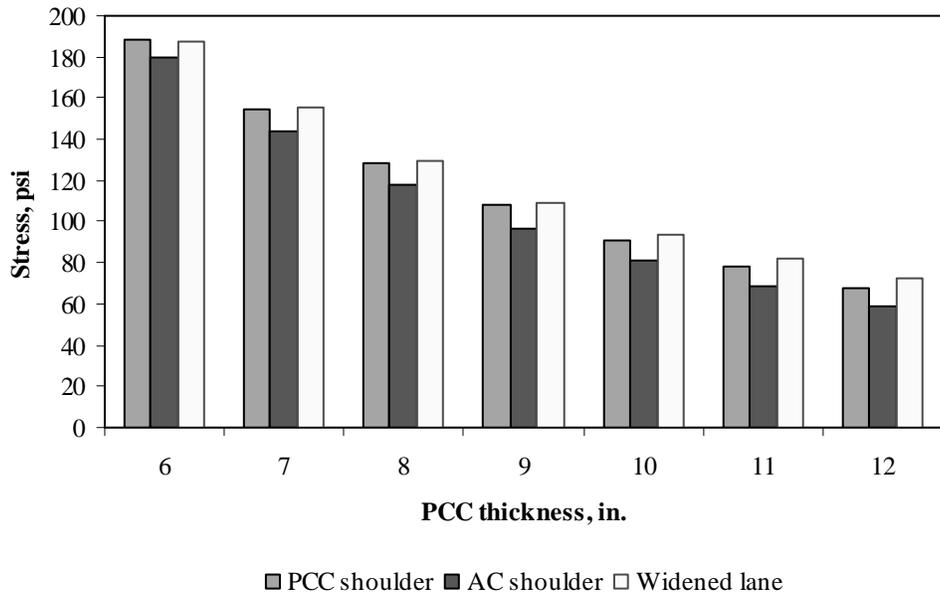

Figure F-19-34: Impact of PCC thickness and lateral support condition on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of 0 in.⁻¹)

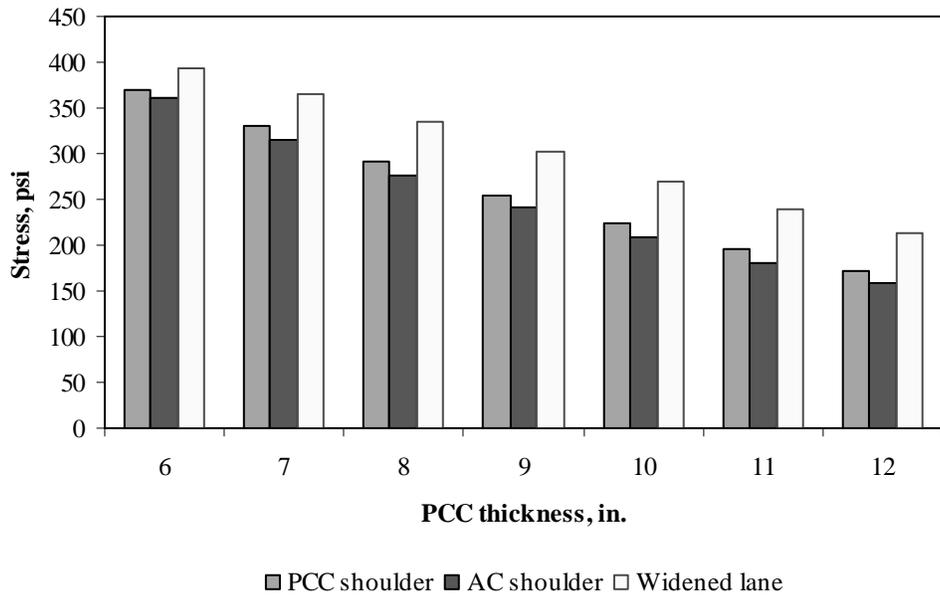

Figure F-19-35: Impact of PCC thickness and lateral support condition on transverse stress at bottom of the Slab (177-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

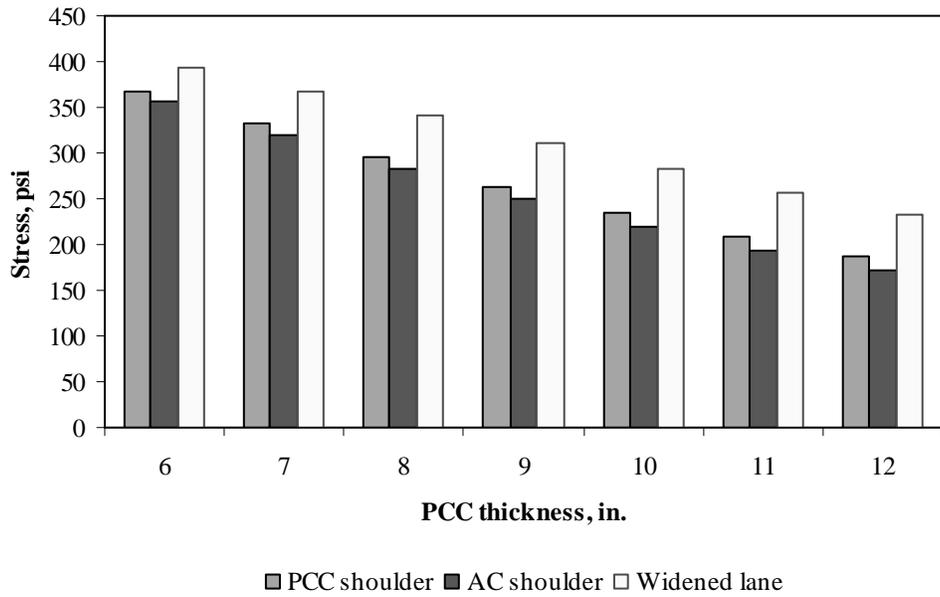

Figure F-19-36: Impact of PCC thickness and lateral support condition on transverse stress at bottom of the Slab (315-in. joint spacing and $\alpha(\Delta T/D)$ of $20 \times 10^{-6} \text{ in.}^{-1}$)

Figures F-19-37 through F-19-42 illustrate the impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on stresses (10-in. PCC thickness, 100-psi/in. modulus of subgrade reaction and PCC shoulder)

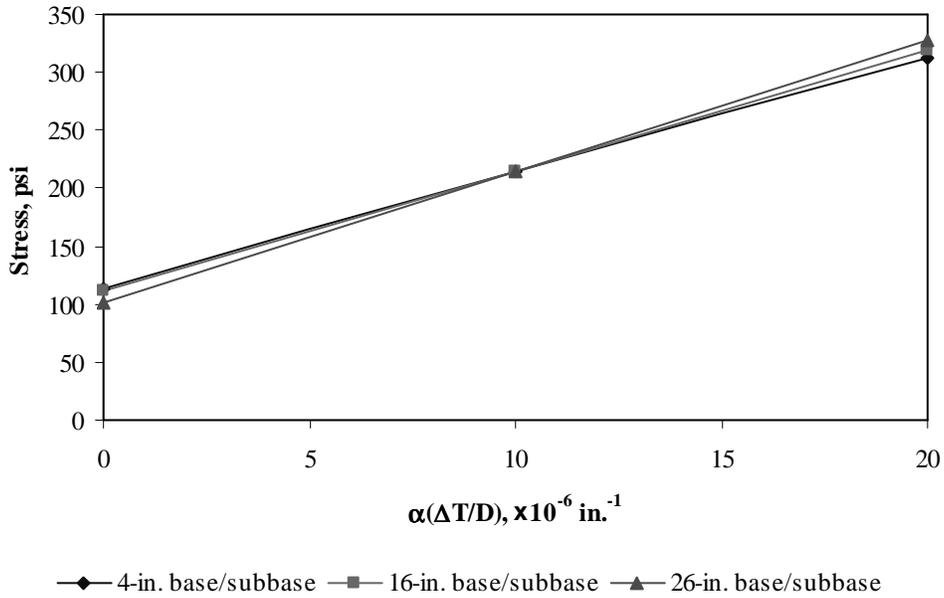

Figure F-19-37: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab (177-in. joint spacing)

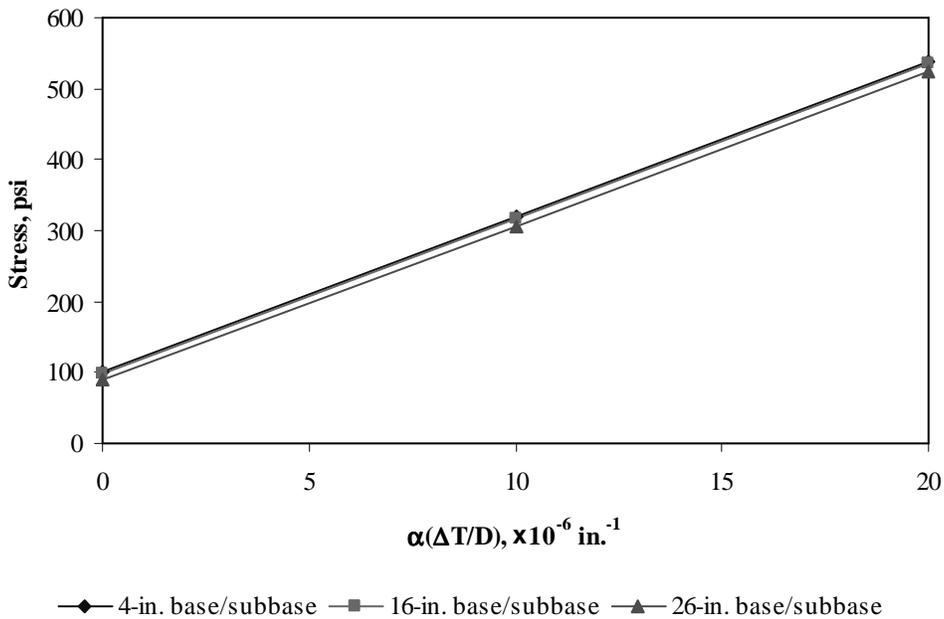

Figure F-19-38: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab (315-in. joint spacing)

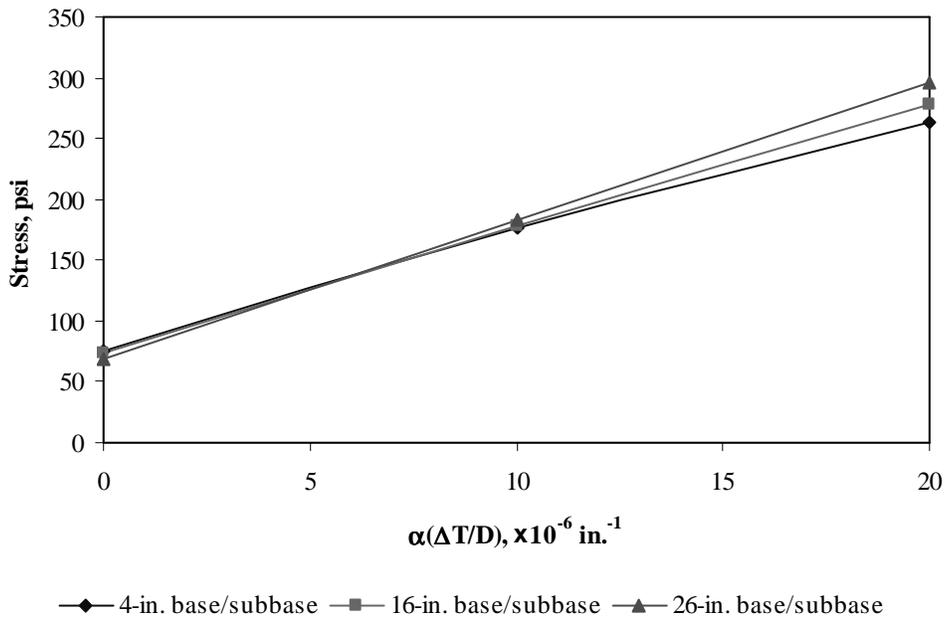

Figure F-19-39: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab (177-in. joint spacing)

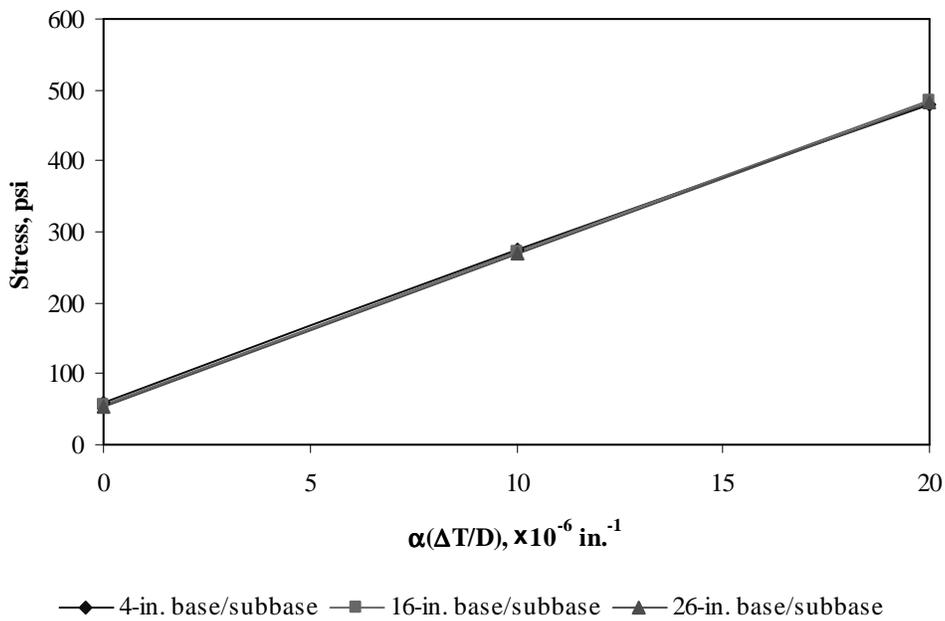

Figure F-19-40: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab (315-in. joint spacing)

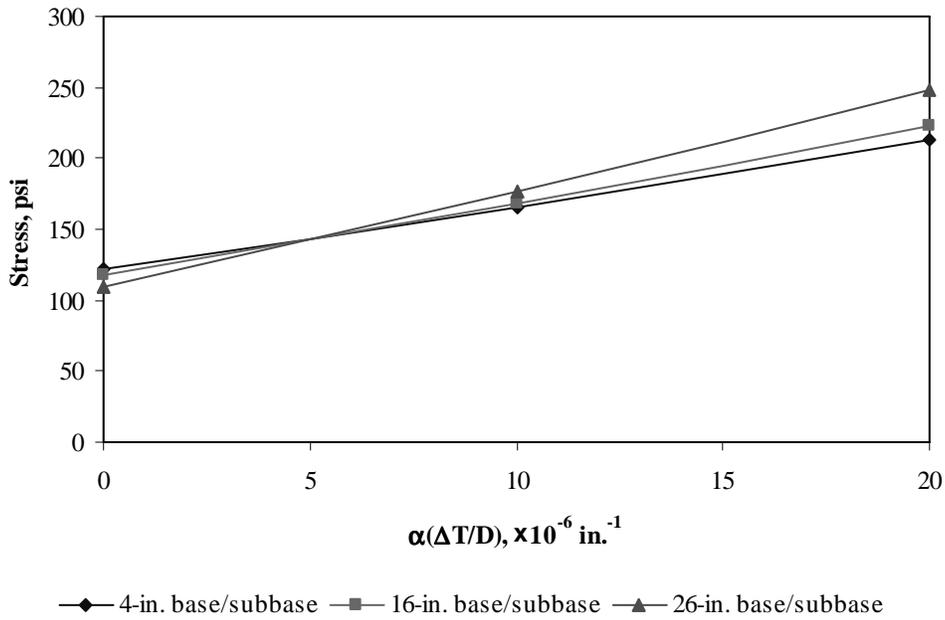

Figure F-19-41: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab (177-in. joint spacing)

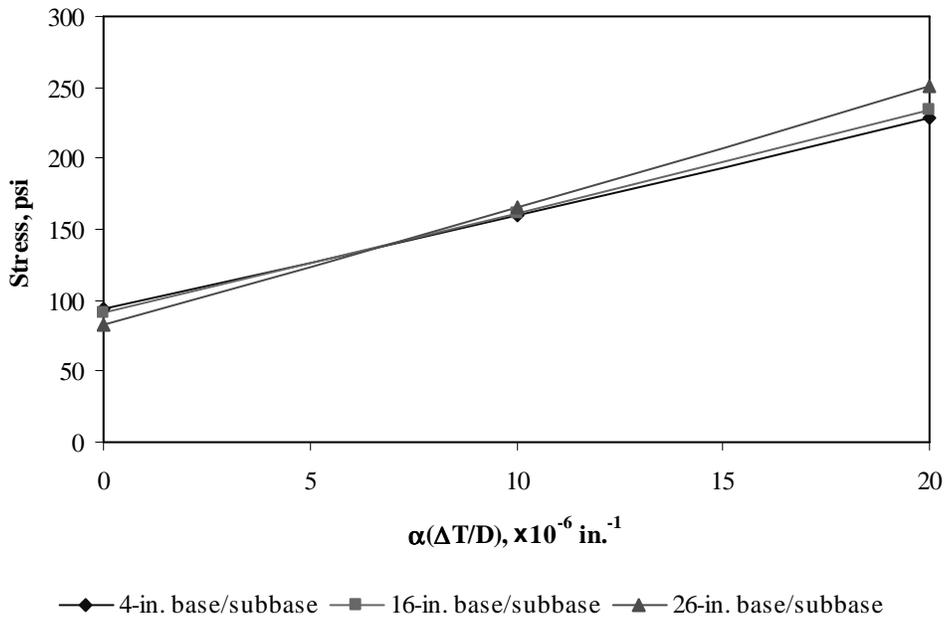

Figure F-19-42: Impact of base/subbase thickness and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab (315-in. joint spacing)

Figures F-19-43 through F-19-48 illustrate the impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on stresses (10-in. PCC thickness, 16-in. base/subbase thickness and PCC shoulder)

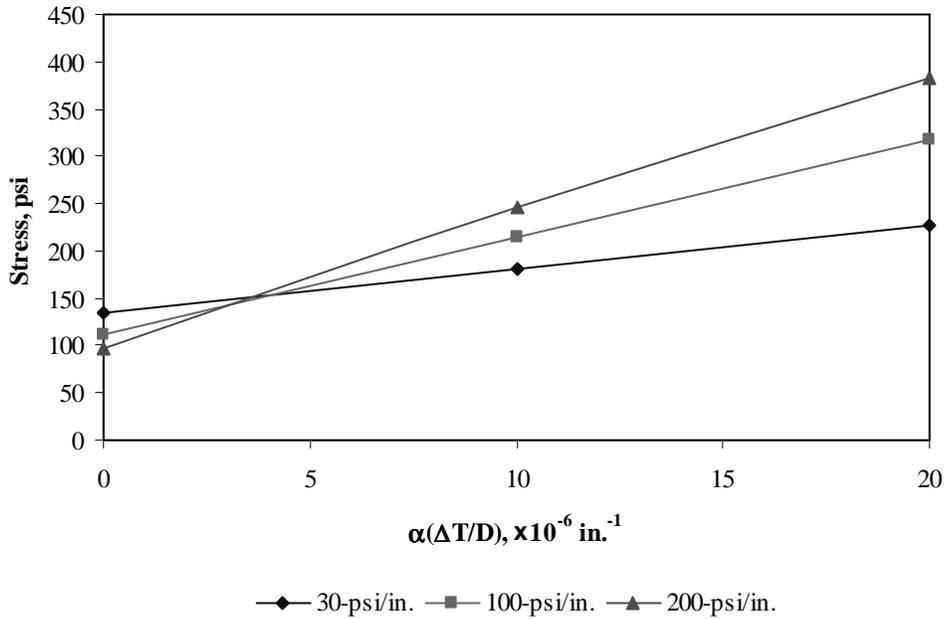

Figure F-19-43: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab (177-in. joint spacing)

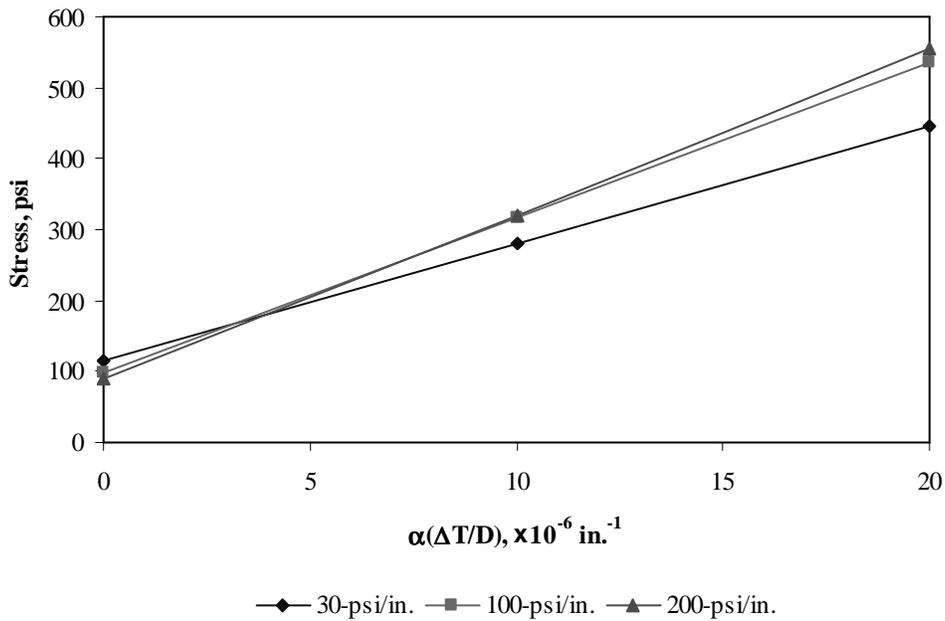

Figure F-19-44: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab (315-in. joint spacing)

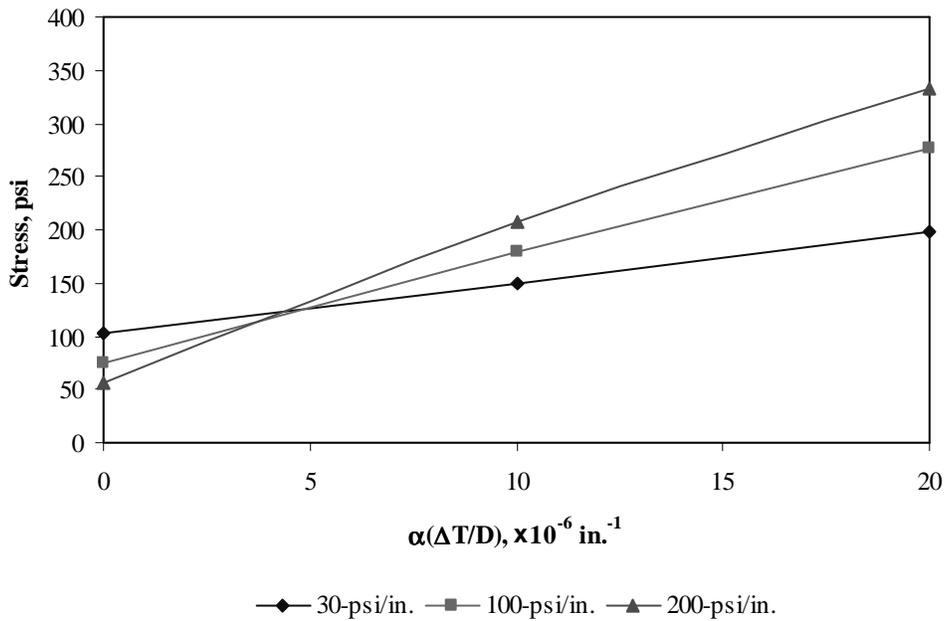

Figure F-19-45: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab (177-in. joint spacing)

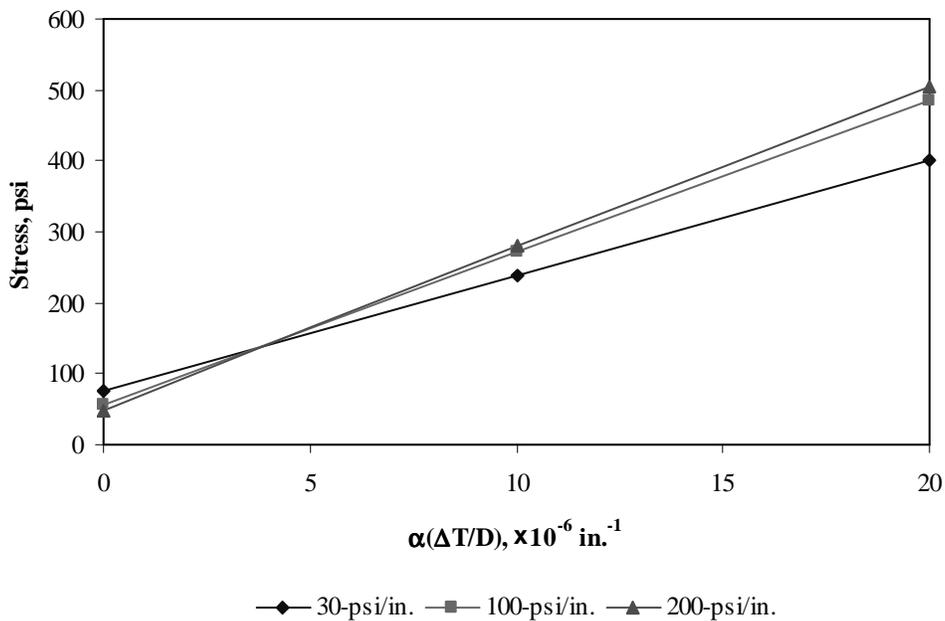

Figure F-19-46: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab (315-in. joint spacing)

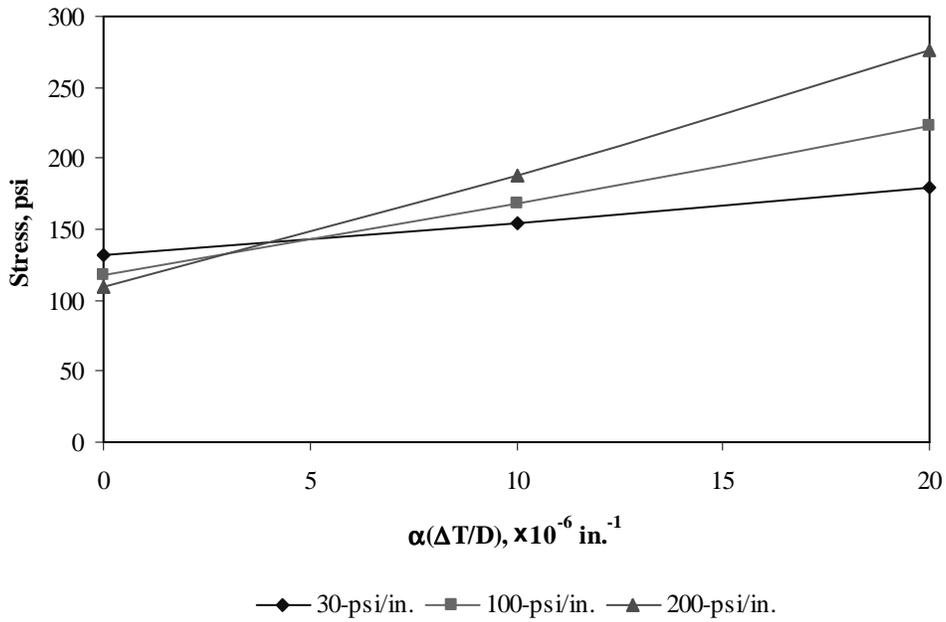

Figure F-19-47: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab (177-in. joint spacing)

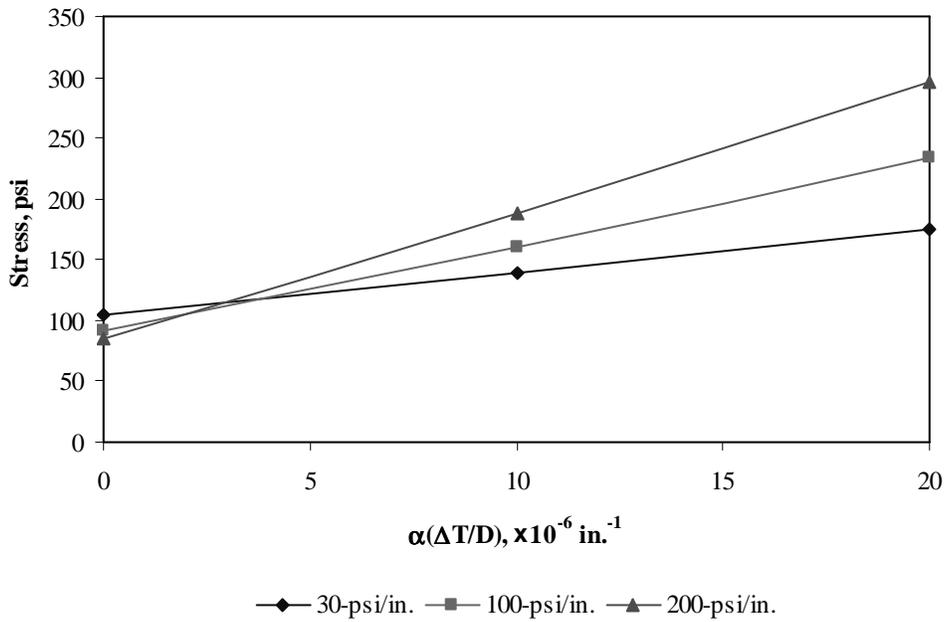

Figure F-19-48: Impact of modulus of subgrade reaction and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab (315-in. joint spacing)

Figures F-19-49 through F-19-51 illustrate the impact of joint spacing and product $\alpha(\Delta T/D)$ on stresses (10-in. PCC thickness, 16-in. base/subbase thickness, 100-psi/in. modulus of subgrade reaction and PCC shoulder)

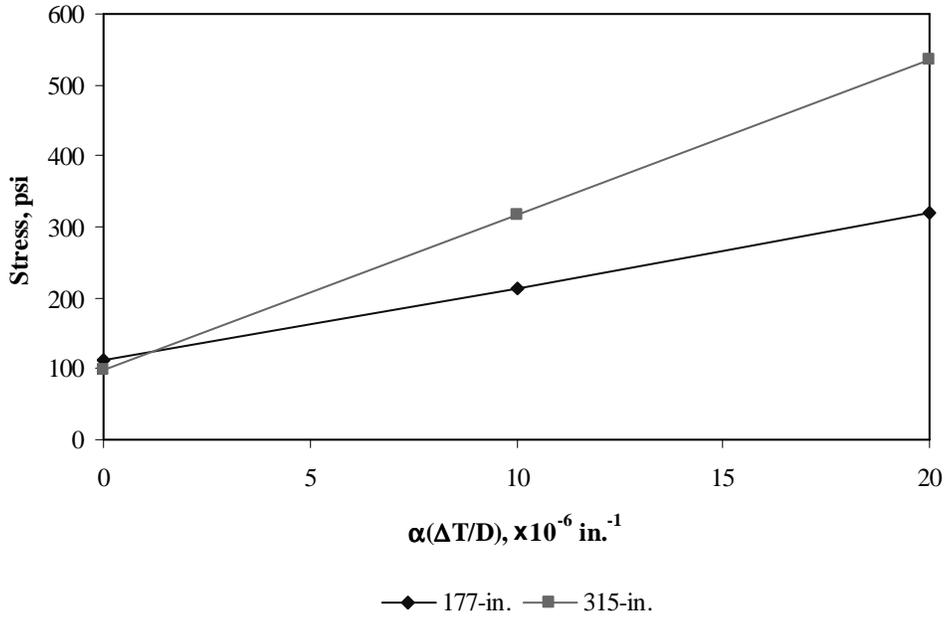

Figure F-19-49: Impact of joint spacing and product $\alpha(\Delta T/D)$ on longitudinal stress at bottom of the slab

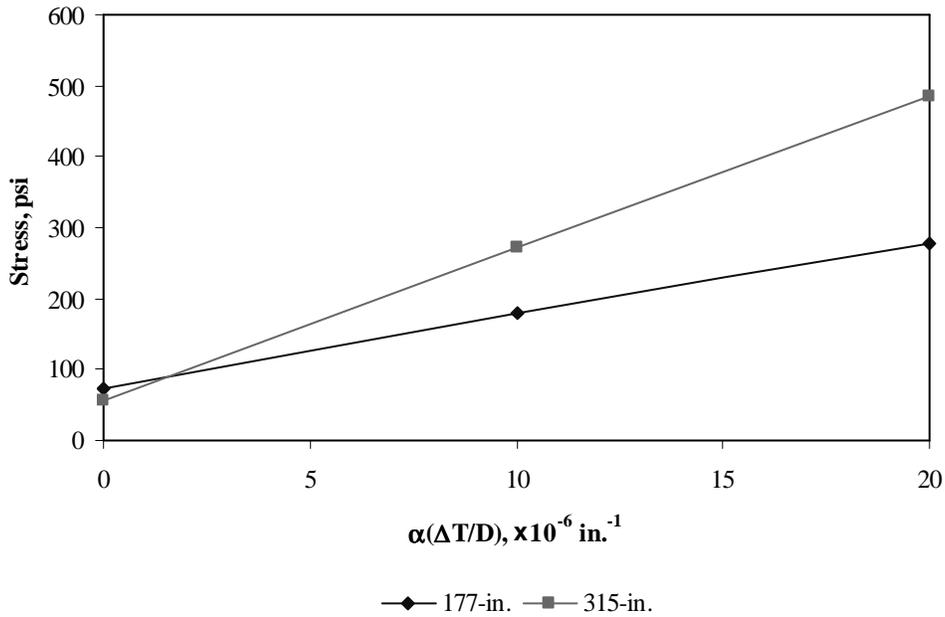

Figure F-19-50: Impact of joint spacing and product $\alpha(\Delta T/D)$ on longitudinal stress at top of the slab

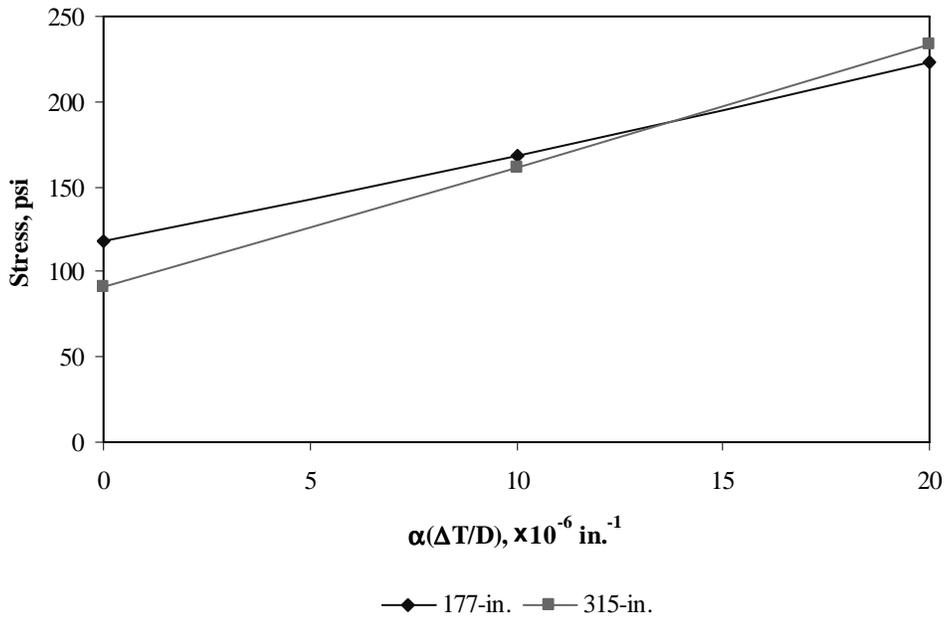

Figure F-19-51: Impact of joint spacing and product $\alpha(\Delta T/D)$ on transverse stress at bottom of the slab
