

# **MI COVID RESPONSE DATA AND MODELING UPDATE**

August 31, 2021

# Executive Summary – All Indicators Show Increases

Michigan remains at [High Transmission](#)

**Percent Positivity** (9.1%) is increasing for two months (up from 8.6 % last week), and **Case Rate** (148.7 cases/million) have increased for two months (up from 127.2 last week)

Michigan has 35<sup>th</sup> lowest number of cases (33<sup>rd</sup> last week), and 9<sup>th</sup> lowest case rate (8<sup>th</sup> last week) in the last 7 days

99% of positive tests available for sequencing in Michigan were **Delta variant** in the last 4 weeks\* (BOL data)

**Percent of inpatient beds occupied by individuals with COVID (5.7%)** has increased for five weeks (up from 4.7% last week).

Michigan has 8<sup>th</sup> lowest inpatient bed utilization (7<sup>th</sup> last week), and 8<sup>th</sup> lowest adult ICU bed utilization (5<sup>th</sup> last week)

**Deaths** (1.3 deaths/million) are increasing for three weeks (1.2 deaths/million last week). 93 COVID deaths between Aug 17 and Aug 23.

Michigan has the T31<sup>st</sup> lowest number of deaths (40<sup>th</sup> last week), and T12<sup>th</sup> lowest death rate (T22<sup>nd</sup> last week) in the last 7 days

7-day average **state testing rate** is steady at 2,406.1 tests/million/day. **Daily diagnostic tests (PCR)** is 24K per day, and the **weekly average for PCR and antigen tests** conducted in Michigan is 41.9K.

10.18 million **COVID-19 vaccine** doses administered, 50.5% of population is fully vaccinated (5.0 million people)

## Science Round Up

Average daily incidence per 100,000 cases in Michigan is currently lower than other states experiencing a surge in delta cases

Cases and deaths are projected to continue increasing across the Midwest and Michigan

57% of students in Michigan school districts are covered by some mask policy

11 school outbreaks reported this week

50.5% of the population is fully vaccinated but account for ~20% of cases, hospitalizations, and deaths

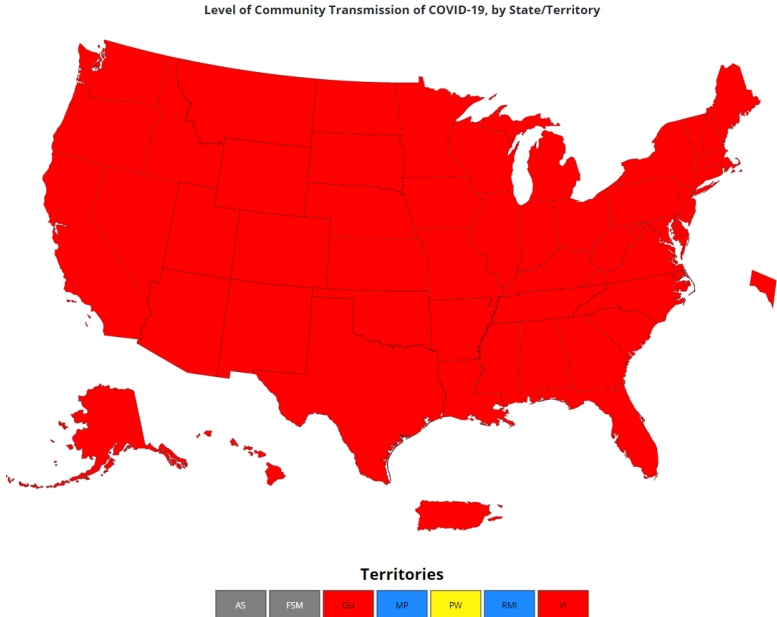

# Global and National Comparisons: US cases increasing

What we see today (data through 8/30):

- Globally, 216,603,365 cases and 4,504,692 deaths\*
- Countries with the highest case count are U.S. (38,799,396), India (32,737,939), and Brazil (20,741,815)\*
- Nearly all US jurisdictions have high community transmission†
- States with the highest seroprevalence (national seroprevalence: 21.6% through end of June)†:

State	Est. Seroprevalence	95% CI
1. Ohio	37.3%	34.3% - 40.4%
2. Illinois	35.4%	31.8% - 39.1%
3. Wisconsin	32.9%	29.4% - 36.8%
4. Texas	32.2%	28.1% - 36.0%
<b>11. Michigan</b>	<b>27.8%</b>	<b>25.0% - 31.2%</b>

— Other notable states: AL (29.2%), AR (22.9%), GA (14.4%), FL (24.1%), LA (12.7%), MO (26.5%), MS (31.5%), TN (29.2%)

# State Comparisons: Missouri and Arkansas

Missouri Confirmed New Cases / 1M (7 days average)

Arkansas Confirmed New Cases / 1M (7 days average)

# State Comparison: Nevada and Louisiana

Nevada Confirmed New Cases / 1M (7 days average)

Louisiana Confirmed New Cases / 1M (7 days average)

# State Comparisons: Florida and Michigan

Florida Confirmed New Cases / 1M (7 days average)

Michigan Confirmed New Cases / 1M (7 days average)

# Key Messages: COVID-19 is Spreading Faster with Delta

## Statewide positivity has increased to 9.1% (last week: 8.6 %)

- One week percent change is up 6% (vs. up 11% last week)
- Increasing for two months (Jun 26 low of 1.2%)
- Positivity is increasing in most MERC regions; and four regions > 10%

## Case rate (148.7 cases/million) increasing for two months (last week: 127.2 cases/million)

- One week increase of 5% (vs. 10% increase last week)
- Increasing for two months (Jun 26 low of 15.4 cases/million)
- Cases per million are increasing in most MERC regions

## Michigan is at High Transmission level

- More than 90% of the counties in Michigan are at high transmission level
- CDC recommends all individuals, regardless of vaccination status, should mask indoors
- The U.S. is at high transmission level (272.9 cases/100,000 in last 7 days) with 54 states/territories in substantial or high transmission

## Number of active outbreaks is up 11% from last week

- Seventy-nine new outbreaks were identified in the past week
- SNF/LTC reported the most new and ongoing outbreaks this week

# Confirmed and probable case indicators

Other Indicators

Science Round-up

# Backfill of case data by onset date is lagging by two weeks

- Over the last 8 weeks, it has taken longer for cases to be reported to local public health which means that the graphs are not as accurate for recent days
- More cases are reported to local public health with an earlier onset date (i.e., between 7 and 14 days prior)
- The likely explanation is that fewer individuals are seeking a COVID-19 test earlier in their disease progression

# Regional Time Trends

- Metrics for three regions on the postage stamp showed potential downward trends:
  - Jackson Positivity Trend
  - Kalamazoo CDC Case Trend
  - Traverse City CDC Case Trend
- While these metrics could be indicative of shifts in the Delta surge, a more likely explanation is the shift in test seeking behavior and the reporting of tests to local public health
- Jackson region saw a one-week decline in positivity, but this was due to a single day positivity drop (Aug 25 at 8%). All subsequent days have reported > 12%
- Kalamazoo and Traverse City saw a one week decrease in cases by onset date yet cases by report date continue to increase
- **At this point, cumulative data do not suggest that the delta surge in Michigan is subsiding**

# Number of Outbreaks Reported has Increased

Number of outbreak investigations by site type, week ending Aug 26

1. Based on a setting's level of control and the extent of time patrons/residents spend in the particular setting, different settings have differing levels of ability to ascertain whether a case derived from that setting

NOTE: Many factors, including the lack of ability to conduct effective contact tracing in certain settings, may result in significant underreporting of outbreaks. This chart does not provide a complete picture of outbreaks in Michigan and the absence of identified outbreaks in a particular setting in no way provides evidence that, in fact, that setting is not having outbreaks.

# Key Messages: COVID-19 and Healthcare Capacity and COVID Severity

Hospitalizations and ICU utilization are increasing

- 2.9% of ED visits are for COVID-like illness (CLI) (up from 2.5% last week)
- Hospital admissions are increasing for nearly all age groups this week
- Hospitalizations up 10% since last week (vs. 29% increase week prior)
- All regions are showing increasing trends in hospitalization trends this week, except Region 2S and 5
  - Hospitalization for COVID-19 is highest in Regions 3, 2N, and 6
  - Fastest growth is in Regions 1, 6, and 8
- Volume of COVID-19 patients in intensive care has increased 28% since last week (vs. 26% increase last week)

Death rate is 1.3 daily deaths per million people

- Death rate has increased four weeks
- 220% increase since Jul 22 low
- 30-day proportion of deaths among those under 60 years of age is steady from the prior week

# Statewide Hospitalization Trends: Total COVID+ Census

Hospitalization Trends 3/1/2021 – 8/30/2021  
Confirmed Positive & Persons Under Investigation (PUI)

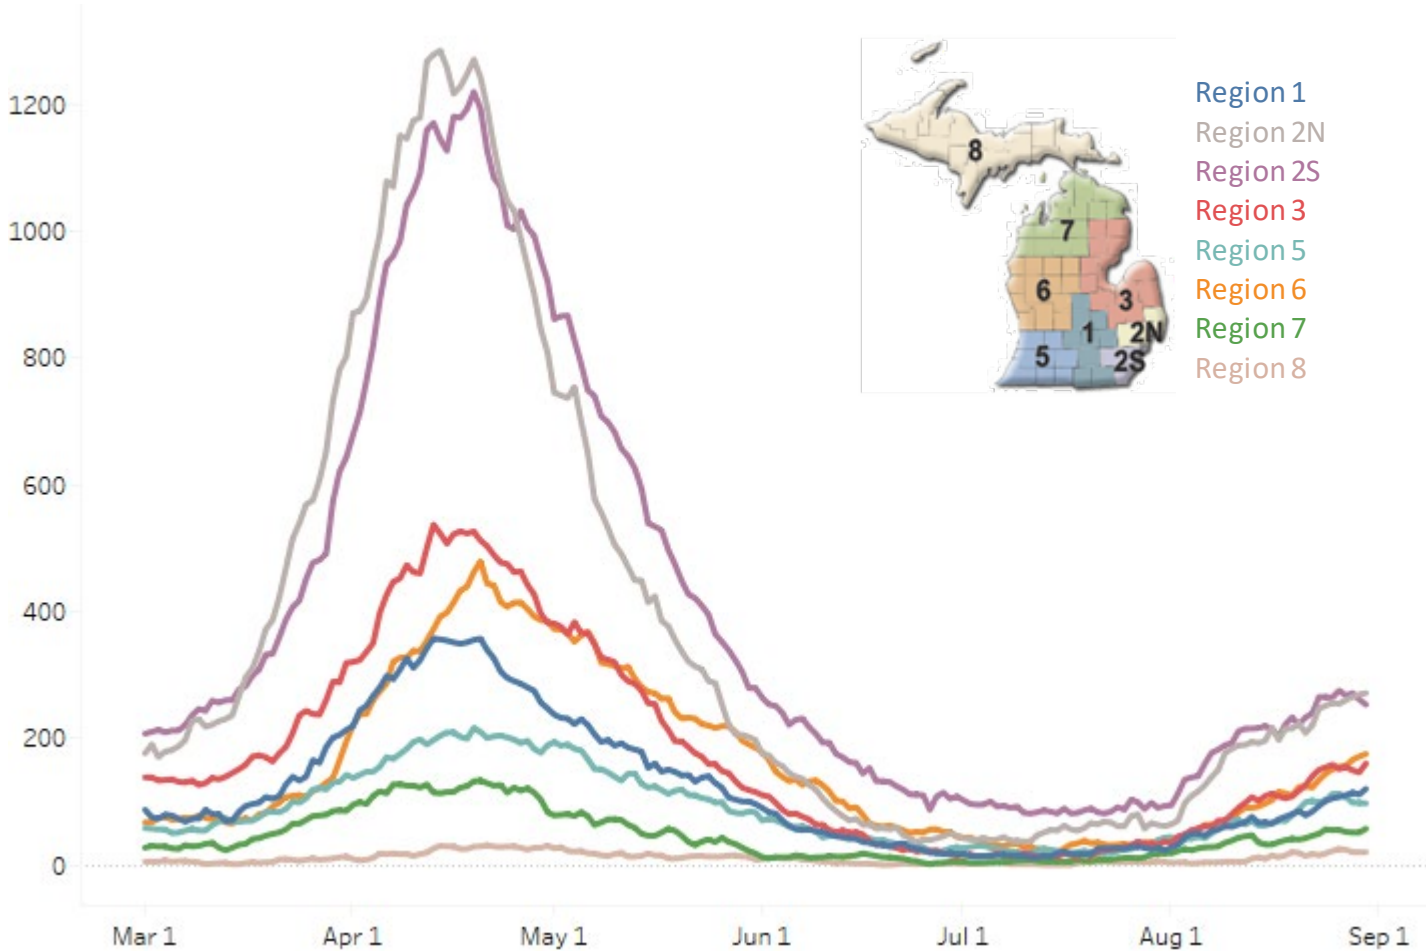

The COVID+ census in hospitals has increased 10% from the last week (previous week was up 29%).

Hospitalized COVID Positive Long Term  
Trend (beginning March 2020)

# Statewide Hospitalization Trends: Regional COVID+ Census

Hospitalization Trends 3/1/2021 – 8/30/2021  
Confirmed Positive by Region

6/8 Regions are showing continued increasing hospitalization trends this week.

Regions 1, 6 and 8 showed the fastest growth while Regions 2S and Region 5 showed slight decreases.

Region	COVID+ Hospitalizations (% Δ from last week)	COVID+ Hospitalizations / MM
Region 1	120 (29%)	111/M
Region 2N	271 (10%)	122/M
Region 2S	253 (-5%)	114/M
Region 3	160 (7%)	141/M
Region 5	97 (-2%)	102/M
Region 6	175 (31%)	119/M
Region 7	57 (16%)	114/M
Region 8	20 (33%)	64/M

# Statewide Hospitalization Trends: ICU COVID+ Census

Hospitalization Trends 3/1/2021 – 8/30/2021  
Confirmed Positive in ICUs

The census of COVID+ patients in ICUs has increased by 28% from last week (previous week was up 26%).

All regions have increasing ICU census from last week with the fastest growth in Regions 5-8. Regions 1 and 6-8 now have 15% or more of ICU beds occupied by COVID+ patients.

Region	Adult COVID+ in ICU (% Δ from last week)	Adult ICU Occupancy	% of Adult ICU beds COVID+
Region 1	29 (38%)	89%	16%
Region 2N	62 (7%)	72%	11%
Region 2S	74 (16%)	81%	11%
Region 3	43 (10%)	87%	13%
Region 5	27 (59%)	72%	14%
Region 6	42 (68%)	79%	18%
Region 7	28 (75%)	75%	18%
Region 8	9 (80%)	63%	15%

# Over 5 Million Michiganders fully vaccinated and 50.5% of total population fully vaccinated

5.04 million people in the state are fully vaccinated

82.7% of people aged 65 and older have completed the series (+.3%)

55.2% of total population initiated (+.5%)

28,859 additional doses

Race/Ethnicity for those 12 years and older:

- Initiation coverage highest among those of Non-Hispanic (NH) Asian, Native Hawaiian or Pacific Islander Race (54.4%), then NH American Indian (51.4%), NH White (47.3%), NH Black or African American Races (36.6%).
- Initiation is at 48.6% for those of Hispanic ethnicity
- Completion follows the same pattern
- 20.1% data missing or unknown

Vaccination Coverage in Michigan as of 8/30/21

Age Group	% At Least One Dose	% Fully Vaccinated	Number Fully Vaccinated
Total Population	55.2	50.5	5,040,341
≥ 12 years	64.1	58.7	5,040,237
≥ 18 years	66.4	61.0	4,783,082
≥ 65 years	87.1	82.7	1,459,715

# Potential COVID-19 Vaccination Breakthrough Cases

Michigan part of CDC's nationwide investigation ([COVID-19 Breakthrough Case Investigations and Reporting | CDC](#))

## Michigan Data (1/1/21 through 8/24/21):

- **17,181 cases met criteria based on a positive test 14 or more days after being fully vaccinated**
- **Less than 1% of people who were fully vaccinated met this case definition**
  - **Includes 279 deaths (247 in persons ages 65 years or older)**
  - **836 cases were hospitalized**
- Vaccine breakthrough cases are expected. COVID-19 vaccines are effective and are a critical tool to bring the pandemic under control. However, no vaccines are 100% effective at preventing illness. Some fully vaccinated people will get sick, and some will even be hospitalized or die from COVID-19. However, there is evidence that vaccination may make illness less severe for those who are vaccinated and still get sick. The risk of infection, hospitalization, and death are all much lower in vaccinated compared to unvaccinated people.
- More than 171 million people in the United States have been fully vaccinated as of August 23, 2021. Like with other vaccines, vaccine breakthrough cases will occur, even though the vaccines are working as expected. Asymptomatic infections among vaccinated people will also occur.
- Current data suggest that COVID-19 vaccines authorized for use in the United States offer protection against most SARS-CoV-2 variants circulating in the United States. However, variants will cause some vaccine breakthrough cases.

# Science Round Up

## Wastewater Surveillance: new system for understanding spread of the virus

### Deeper look at trends: What happening in other states and comparison to past surges

- Average daily incidence per 100,000 cases in Michigan is currently lower than other states experiencing a surge in delta cases
- Cases and deaths are projected to continue increasing across the Midwest
- CDC models project continued increases in cases, hospitalizations, and deaths for Michigan
- Effective reproduction number ( $R_t$ ) in Michigan remains  $>1$ , suggesting continued growth

### What do we know about schools

- 40% of school districts have some mask policy, and 57% of students\* are covered by some mask policy
- Number of reported school outbreaks this week is 11, including outbreaks seen in High Schools (7), Pre K-Elementary (3), and Administrative (1). No outbreaks were seen in Middle/Jr High.

### Update on breakthrough cases and boosters

- 50.5% of the population is fully vaccinated yet only account for  $\sim 20\%$  of cases, hospitalizations, and deaths
- Post Delta: mRNA vaccines are 39-84% against infection and 75-95% against hospitalization

# Michigan Wastewater Surveillance: Sentinel Network

Sentinel sites located in communities across the Lower Peninsula

3.6 million people served

Composite samples or equivalent

Shading represents viral levels  
Number of sites reporting  
Dark red is number of sites with detection

**Viral concentrations.** We calculated viral concentrations by dividing the gene copies in a given sample by the population served. Viral concentrations are averaged over a week. Gene copies at or below the limit of detection were considered half the assay detection limit.

**Variability of samples and analysis.** The laboratories analyzing results from the sampled sites work closely with the MDHHS to ensure best methods are used. However, because these methods are not uniform across sites and because each community is different viral concentration should not be compared between locations. These data are best used to examine trends over time for each individual site.

\* Data reporting is not complete for week ending August 22, 2021

Sentinel Site	Most Recent Positive Sample	Consecutive Weeks Positive	Population Served
Grand Rapids WWTP	August 19	4	265000
Traverse City WWTP	August 18	3	45000
Alma WWTP	August 16	3	8976

# Cumulative COVID-19 Case Rates: States with High Delta Comparison

New cases of Covid-19, reported to CDC, in AR, FL, MI, MO, NV, and LA  
Seven-day moving average of new cases (per 100K), by number of days since .01 average daily cases (per 100K) first recorded.

Average daily incidence per 100,000 cases in Michigan is currently lower than other states experiencing a surge in delta cases

Louisiana reporting may be impacted by weather events

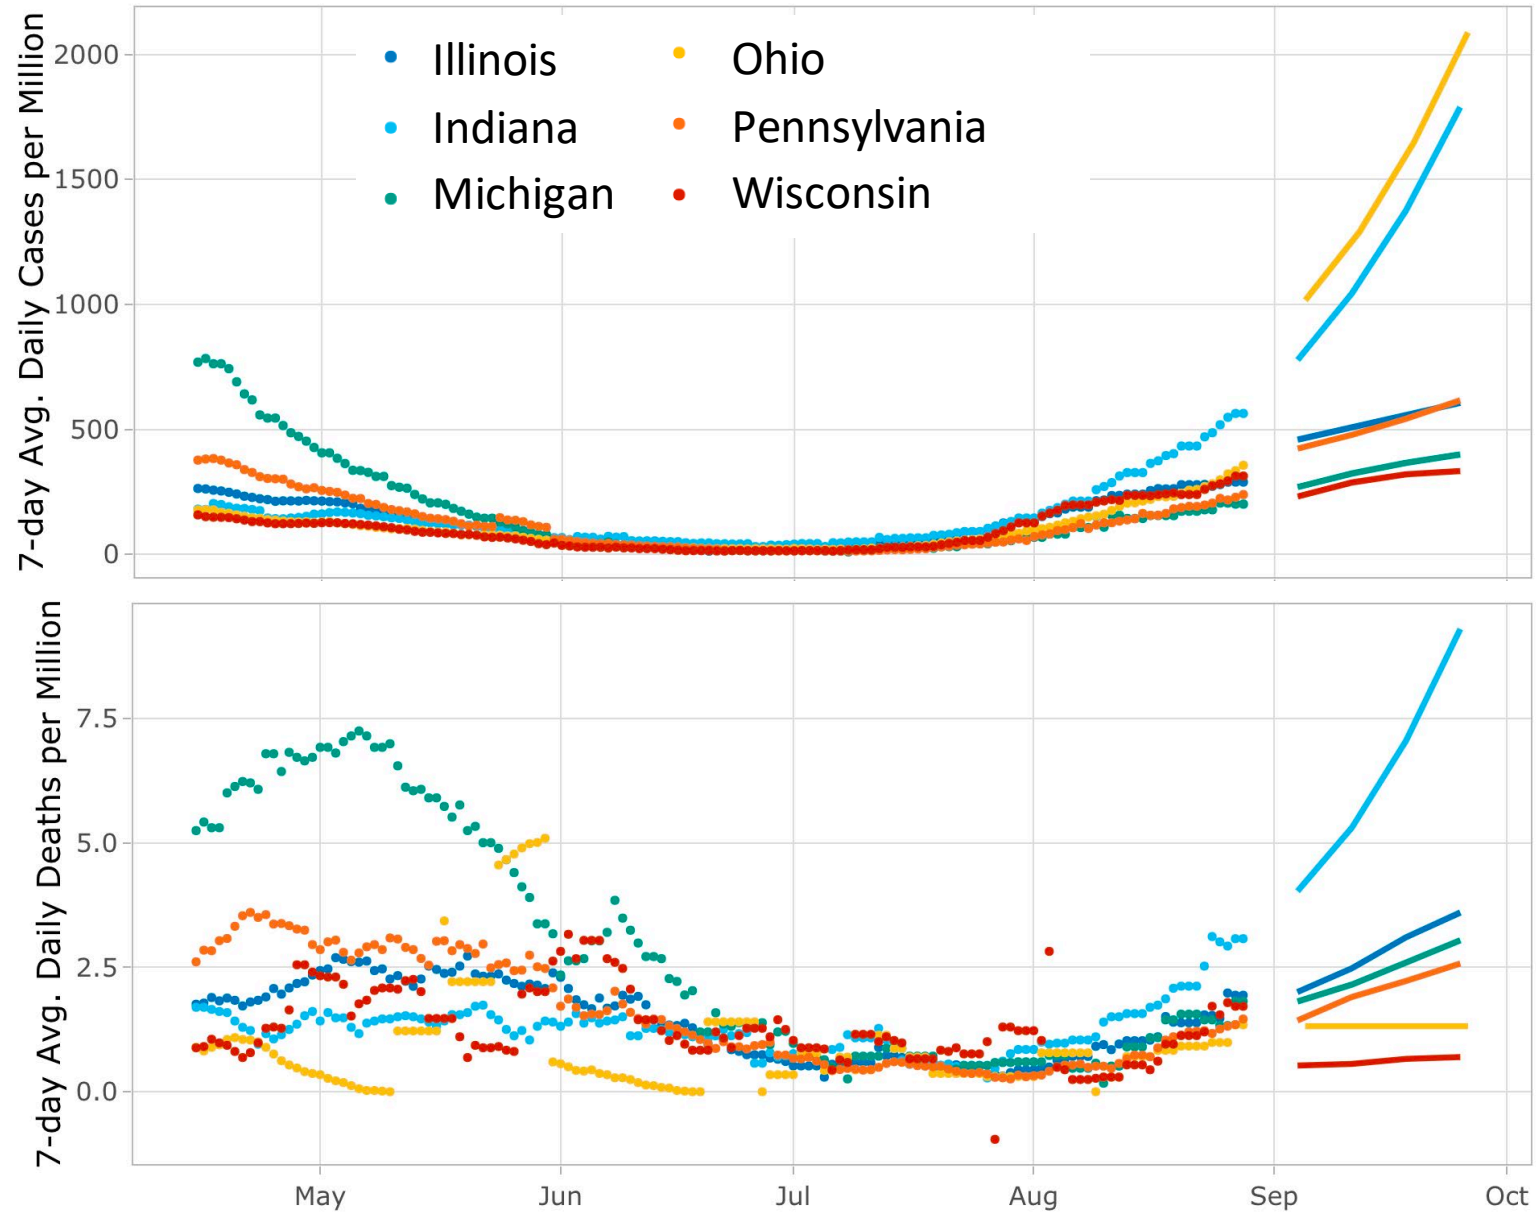

Testing capacity may be limited for states experiencing high case

Source: [CDC COVID Data Tracker – State Trend Comparison](#)

# Ridge regression model projects continued increases for Michigan and neighboring states

- Cases and deaths are projected to continue increasing across the Midwest
- Uncertainty range includes potential for sustained or slowed growth (not shown)
- Line is the ridge regression model projection, and the shaded region represents the 95% confidence region (2.5% and 97.5% quantiles).
- Projections are based on previous data on cases, hospitalizations, and deaths, as well as data on mobility and vaccinations.
- Cases are plotted by report date.
- For full projections, see [dataepi.org](https://dataepi.org)

# K-12 school outbreaks, recent and ongoing, week ending Aug 26

Number of reported outbreaks this week is 11, including outbreaks seen in High Schools (7), Pre K-Elementary (3), and Administrative (1). No outbreaks were seen in Middle/Jr High (0).

Region	Number of reported cases, #		# Ongoing - Excluding New	# New	Number of outbreaks	Range of cases per outbreak
Region 1	0	25			5	2-14
Region 2n	0	2			1	2-2
Region 2s	-	0			0	0-0
Region 3	5	0			1	5-5
Region 5	6	0			2	2-4
Region 6	0	0			0	0-0
Region 7	0	0			0	0-0
Region 8	0	4			2	2-2
Total	11	31			11	2-14

Grade level	Number of reported cases, #		# Ongoing - Excluding New	# New	Number of outbreaks	Range of cases per outbreak
Pre-school - elem.	6	2			3	2-6
Jr. high/middle school	0	0			0	0-0
High school	5	27			7	2-14
Administrative	0	2			1	2-2
Total	11	31			11	2-14

Many factors, including the lack of ability to conduct effective contact tracing in certain settings, may result in significant underreporting of outbreaks. This chart does not provide a complete picture of outbreaks in Michigan and the absence of identified outbreaks in a particular setting in no way provides evidence that, in fact, that setting is not having outbreaks.

# Cumulative COVID-19 Cases by Vaccination Status, Michigan, Jan 15 – Aug 24

Fully Vaccinated People (4,688,381)		
Cases	Hospitalization	Deaths
Percent of Cases In People Not Fully Vaccinated (416,707 / 433,888) <b>96.0%</b>	Percent of Hospitalizations In People Not Fully Vaccinated (11,860 / 12,696) <b>93.4%</b>	Percent of Deaths In People Not Fully Vaccinated (4,876 / 5,155) <b>94.6%</b>
<b>416,707</b> Total Cases Not Fully Vaccinated	<b>11,860</b> Total Hospitalized Not Fully Vaccinated	<b>4,876</b> Total Deaths Not Fully Vaccinated
Total Breakthrough Cases <b>17,181</b>	Total Breakthrough Hospitalizations <b>836</b>	Total Breakthrough Deaths <b>279</b>
<b>0.366%</b> Percent of Fully Vaccinated People who Developed COVID-19 (17,181 / 4,688,381)	<b>0.018%</b> Percent of Fully Vaccinated People Who Were Hospitalized for COVID-19 (836 / 4,688,381)	<b>0.006%</b> Percent of Fully Vaccinated People Who Died of COVID-19 (279 / 4,688,381)
<b>4.0%</b> Percent of Cases Who Were Fully Vaccinated (17,181 / 433,888)	<b>6.6%</b> Percent of Hospitalizations Who Were Fully Vaccinated (836 / 12,696)	<b>5.4%</b> Percent of Deaths Who Were Fully Vaccinated (279 / 5,155)
Total Cases: <b>433,888</b>	Total Hospitalizations: <b>12,696</b>	Total Deaths: <b>5,155</b>

Michigan Disease Surveillance System may underestimate the frequency of COVID-19 hospitalizations:

- Case investigation and follow-up is more difficult for individuals who get vaccinated (e.g., they are too ill to speak to investigators, don't answer their phone, or otherwise).
- These hospitalizations include individuals who are hospitalized for issues other than COVID19 (the same as breakthrough COVID-19).
- Individuals who get hospitalization will lag after infection and may occur after case investigation.

# Trends in Breakthrough Cases, Hospitalizations, and Deaths

- 50.5% of the population is fully vaccinated yet only account for ~20% of cases, hospitalizations, and deaths
- As the fully vaccinated population has increased, so have the percent of breakthrough incident; but breakthrough burden remains lower

In the last 30 days (Jul 26 – Aug 24), 7,723 (21%) of 37,420 cases, 255 (24%) of 1,061 hospitalizations, and 40 (21%) of 190 deaths were among fully vaccinated individuals

Michigan Disease Surveillance System may underestimate the frequency of COVID-19 hospitalizations:

- Case investigation and follow-up is more difficult for individuals who get vaccinated (e.g., they are too ill to speak to investigators, don't answer their phone, or otherwise).
- These hospitalizations include individuals who are hospitalized for issues other than COVID19 (the same as breakthrough COVID-19).
- Individuals who get hospitalization will lag after infection and may occur after case investigation.

# COVID-19 Vaccination Breakthrough Cases and Deaths

- Trends over time show that both case and death rates among the Fully Vaccinated are lower than the Not Fully vaccinated rates in Michigan
- The *proportion* of breakthrough cases and deaths among all cases and deaths has shown some increases as more people become fully vaccinated
  - However, the risk of infection and death remains significantly lower among the fully vaccinated

	Additional Doses for Immunocompromised	Booster Doses
Criteria	CDC recommends moderately to severely immunocompromised people consider receiving an additional (third) dose of an mRNA COVID-19 vaccine ( <a href="#">Pfizer-BioNTech</a> or <a href="#">Moderna</a> )	PROJECTED: first people eligible would be those who were the first to receive a COVID-19 vaccination (those who are most at risk): healthcare providers, residents of long-term care facilities, and other older adults.
Timing	At least 28 days after the completion of the initial 2-dose mRNA COVID-19 vaccine series.	PROJECTED: 8 months after they received their <a href="#">second dose</a> of an mRNA vaccine (either <a href="#">Pfizer-BioNTech</a> or <a href="#">Moderna</a> ).
Trigger	Began 8/13/21	Subject to authorization by the U.S. Food and Drug Administration and recommendation by CDC's Advisory Committee on Immunization Practices (ACIP).

# ACIP 8/30/21 Meeting

- Members discussed data needed to create a framework for booster doses
  - 5 studies on waning immunity against infection but sustained VE against hospitalization and death. Data demonstrates increase in Delta variant decreases VE against infection:
    - VE ~60-90% effective in late May in 5 studies → 7% Delta variant in US
    - VE ~40-80% effective in Mid-July in 5 studies → 94% Delta variant in US
  - Is Delta affecting VE?
    - Globally, among studies assessing infections with Alpha vs Delta: mild decrease in Delta VE1-7
      - Pre-Delta: 87% or higher
      - Post Delta: 39-84% against infection and 75-95% against hospitalization
- ACIP meeting planned for mid-September
