
	<h2 style="text-align: center;">Michigan Source Water Protection Grant Program</h2> <h3 style="text-align: center;">Grant Eligible Activities</h3> <p style="text-align: center;">(Examples are not all inclusive, if you have questions about whether an activity is grant eligible, please contact one of the Source Water Protection staff)</p>
<p>Definition of a Source Water Protection Grant Eligible Activity</p>	<p>Grant eligible activities shall support the development or implementation of a local Source Water Protection (SWP) program and be consistent with the State of Michigan SWP program and is performed within the Source Water Protection Area (SWPA) or one-mile radius for low tritium public water supply wells.</p>
<p>Roles and Duties</p>	<p>Examples of grant eligible roles and duties include:</p> <ul style="list-style-type: none"> • Formation of a local SWP team, a collection of not less than three persons whose purpose is to facilitate the development, implementation, and maintenance of a SWP. The team must include the Public Water Supply (PWS) Superintendent and a representative from the municipality served by the PWS. The team meets quarterly during the contract period as a minimum and reports quarterly to the Michigan Department of Environment, Great Lakes, and Energy (EGLE). • Development and implementation of management strategies on a local level.
<p>Delineation Activities</p>	<p>Examples of grant eligible delineation activities include:</p> <ul style="list-style-type: none"> • Compiling existing hydrogeologic information • Installing observation wells for an aquifer test on an existing public water supply well • Surveying • Collecting static water levels • Performing groundwater modeling, including particle tracking <p>If deemed necessary by EGLE due to the lack of accessibility to existing wells, the area geology indicates a PWS may be low tritium public water supply, or a known groundwater contamination is present within the SWPA, the following activities may be grant eligible:</p> <ul style="list-style-type: none"> • The installation of monitoring wells for the collection of static water level information • The collection and analysis of tritium samples • The installation of sentinel wells to monitor water quality within the SWPA
<p>Contaminant Source Inventory Activities</p>	<p>Examples of grant eligible contaminant source inventory activities include:</p> <ul style="list-style-type: none"> • Record searches to identify potential sources of contamination and land uses that have a potential to impact the groundwater • Conducting general surveys to identify potential sources of contamination and land uses that have a potential to impact the groundwater • Conducting on-site inspection of facilities that have a potential to impact the groundwater • Record searches to identify historical land uses that have a potential to impact the groundwater • Map existing and potential sources of contamination within the SWPA • Updating the contaminant source inventory • Developing and implementing a program to locate and identify abandoned wells

<p>Management Strategy Activities</p>	<p>Examples of grant eligible management strategy activities include:</p> <ul style="list-style-type: none"> • Developing and implementing management strategies within the SWPA • The development and implementation of best management practices that reduce the risk of groundwater contamination • The development and implementation of SWP resolutions or ordinances • On-site inspections for the purpose of improving facility management of potential sources of contamination • The development and management of a program to control abandoned wells, excluding the actual sealing of abandoned wells • Incorporation of a SWP program into a municipality's master plan or other regional land use planning program • Waste reduction strategies targeted for source water protection areas • The development and implementation of partnership agreements between municipalities for the purpose of source water protection
<p>Contingency Plan and Emergency Response Protocol Activities</p>	<p>Examples of grant eligible contingency plan and emergency response protocol activities include:</p> <ul style="list-style-type: none"> • The development and implementation of a contingency plan and emergency response protocol for a SWPA or within a one-mile radius of the well field for a low tritium public water supply are grant eligible activities
<p>New Source Activities</p>	<p>Examples of grant eligible new source activities include:</p> <ul style="list-style-type: none"> • Completion of a delineation for a new well or well field, exclusive of the cost incurred to conduct an aquifer test that is a requirement of the PWS program for the construction of new wells • The development and implementation of a SWP program for a new well or well field • Incorporation of a new well or well field into an existing SWP program
<p>Public Participation Activities</p>	<p>Examples of grant eligible public participation activities include:</p> <ul style="list-style-type: none"> • Development and implementation of a school curriculum related to SWP • Development and implementation of a strategy to educate the general public on issues related to SWP • Development, production and circulation of educational materials • Development, preparation, and production of media announcements, such as news releases, newspaper articles and radio announcements • Signing activities which identify an approved SWPA or which promote the concept of SWP, such as storm drain stenciling, construction and placement of road signs • Advertisement for a hazardous waste collection (the actual collection of hazardous waste is not grant eligible)

	<h2 style="text-align: center;">Michigan Source Water Protection Grant Program</h2> <h3 style="text-align: center;">Non-Grant Eligible Activities</h3> <p style="text-align: center;">(Examples are not all inclusive, if you have questions about whether an activity is grant eligible, please contact one of the Source Water Protection staff)</p>
<p>Roles and Duties</p>	<p>Examples of non-grant eligible roles and duties include:</p> <ul style="list-style-type: none"> • Food for meetings • Mileage/Travel expenses • Employees' wages, unless the employee's specific duties, as outlined in his or her job description, include Source Water Protection (SWP) and have been pre-approved by EGLE.
<p>Delineation Activities and New Sources</p>	<p>Examples of non-grant eligible delineation activities and new sources include:</p> <ul style="list-style-type: none"> • Aquifer tests for new wells, as required by the Safe Drinking Water Act or aquifer test policy
<p>Management Strategies</p>	<p>Examples of non-grant eligible management strategies include:</p> <ul style="list-style-type: none"> • Purchasing land or real estate • Sealing abandoned wells • Activities required by other Federal or State statutes • Water quality monitoring, except Tritium testing
<p>Public Participation Activities</p>	<p>Examples of non-grant eligible public participation activities include:</p> <ul style="list-style-type: none"> • Household hazardous waste collection and other community-wide general groundwater protection activities • Equipment purchases, except for the Groundwater Flow model and other teaching models for SWP
<p>Contingency Plan and Emergency Response Protocol Activities</p>	<p>Examples of non-grant eligible contingency plan and emergency response protocol activities include:</p> <ul style="list-style-type: none"> • Emergency water connections, even if they are part of the contingency plan, because it is a capital improvement on the water system • Training
