IN STORMWATER MANAGEMENT, 1993

Site Selection

Contributing Drainage Area

- Up to 5 acres
- One acre or less preferred
- Can be used in any soil type

Sizing Criteria

Size is based on the contributing drainage area, amount of imperviousness and soil type.

Raingarden Sizing Criteria

Rain gardens less than 30 feet from downspout

	3-5 inch deep	6-7 inch deep	8 inch deep
Sandy Soil	0.19	0.15	0.08
Silty Soil	0.34	0.25	0.16
Clayey Soil	0.43	0.32	0.2

Rain gardens greater than 30 feet from downspout

	3-5 inch deep
Sandy Soil	0.19
Silty Soil	0.34
Clayey Soil	0.43

Water depth based on ground slope.
Ground Slope <4%, depth = 3-5 ft
Ground Slope 5 – 7%, depth = 6-7 inches
Ground Slope 8-12%, depth = 8 inches

Contributing Drainage Area X size factor = Rain garden surface area

Bioretention Sizing Criteria

Rain Garden Surface Area (A_f)

$A_f = WQV * (d_f)/k*(h+ d_f)(t_f)$

$WQV = rainfall * R_v$

$R_v = 0.05 + 0.009 \ (\% \ imperviousness)$

$A_f = Drainage \ Area * 5\% * R_v$

Treatment Train

Construction Cost Comparison

	Patuxent Riding	Conventional	Low Impact
Grading /Roads		$ 569,698	$ 426,575
StormDrains		$ 225,721	$ 132,558
SWM Pond / Fees		$ 260,858	$ 10,530
Bioretention / Micro		$ -	$ 175,000
Total		$ 1,086,277	$ 744,663
Unit Cost		$ 14,679	$ 9,193
Lot Yeild		74	81

Maintenance

Immediately After construction

➢ Visually inspect basin after significant rain events for signs of erosion. Repair any erosion that develops.

➢ Visually inspect basin after significant rain events for loss of mulch in flow paths. Replace any mulch lost.

➢ Water plants every day there is no rainfall for 14 days after planting.

➢ Remove or replace any plantings that do not take hold.

Maintenance

Routine Maintenance

- Inspect for signs of erosion several times throughout the year.

- Replace mulch at least once per year. Twice per year is recommended.

- Identify dead or diseased plants and replace.

- Prune woody vegetation annually to provide for healthy vegetation and conform to adjacent uses (parking, electric wires, recreation uses, etc.

- Inspect the inflow location twice per year for signs of any blockage or buildup.

Maintenance

Long Term Maintenance

If the rain garden takes more than 36 hours to drain, remove mulch and several top inches of soil. Till the remaining soil add fresh soil mixture and mulch.
Pollutant Removal Effectiveness

**Pollutant Removal Effectiveness of Two Bioretention Areas in Maryland (EPA)**

Pollutant	Removal (%)
Copper	43 - 97
Lead	70 - 95
Zinc	64 - 95
Phosphorus	65 - 87
Total Kjeldahl Nitrogen	52 - 67
Ammonia Nitrogen	92
NO_3	15 -16
Total Nitrogen	49
Calcium	27
