

COVID-19 Workplace Requirements for Meat and Poultry Processing

SUMMARY OF MIOsha EMERGENCY RULES

Important Note

MDHHS has issued COVID-19 Public Health Orders regarding requirements about face coverings for the public, gathering limitations, and other public health concerns.

Please visit Michigan.gov/Coronavirus for information on these public health orders.

The requirements in this presentation are required by MIOSHA Emergency Rules for COVID-19.

Overview

- ❑ Requirements for All Workplaces
 - ❑ Definitions
 - ❑ Exposure Determination
 - ❑ COVID-19 Preparedness & Response Plan
 - ❑ Basic Infection Control Measures
 - ❑ Health Surveillance
 - ❑ Workplace Controls
 - ❑ Person Protective Equipment
 - ❑ Employee Training
 - ❑ Recordkeeping
- ❑ Meat and Poultry Processing Industry Requirements and Resources

MIOSHA Emergency Rules for COVID-19

REQUIREMENTS
FOR ALL
WORKPLACES

Definitions

- **Close Contact**: someone who was within 6ft of an infected person for at least 15 minutes starting from 2 days before illness onset (or for asymptomatic persons, 2 days prior to specimen collection) until the time the person is isolated
- **COVID-19**: coronavirus disease 2019, a severe acute respiratory disease characterized by symptoms including fever, cough, fatigue, and shortness of breath which may progress to pneumonia, multi-organ failure, & death
- **Known Cases of COVID-19**: person who have been confirmed through diagnostic testing to have COVID-19
- **SARS-CoV-2**: severe acute respiratory syndrome coronavirus 2, the virus which is the causative agent of COVID-19
- **Suspected Cases of COVID-19**: persons who have symptoms of COVID-19 but have not been confirmed through diagnostic testing or person who have had close contact with a person who has been confirmed through diagnostic testing

Exposure Determination

- ❑ Evaluate routine & reasonably anticipated tasks/procedures to determine actual OR reasonably anticipated exposures to SARS-CoV-2
- ❑ Categorize tasks/procedures into the following risk categories:
 - ❑ Lower Exposure Risk
 - ❑ Medium Exposure Risk
 - ❑ High Exposure Risk
 - ❑ Very High Exposure Risk
- ❑ Use OSHA guidance for additional resources for exposure determination
 - ❑ [Guidance on Preparing Workplaces for COVID-19](#)
 - ❑ [COVID-19 Hazard Recognition](#)

**Occupational Risk Pyramid
for COVID-19**

Exposure Determination

□ Exposure Risk Categories

■ Lower Exposure Risk

- Tasks do not require contact with people known or suspected of being infected with SARS-CoV-2
- Tasks do not have frequent close contact with the public
- Workers have minimal occupational contact with coworkers & the public

■ Medium Exposure Risk

- Tasks require frequent OR close contact with people who may be infected with SARS-CoV-2, but who are NOT a known/suspected COVID-19 patient
- In areas with ongoing community transmission, workers that have contact with the public (schools, high-population-density work environments, high-volume retail settings)
- In areas without ongoing community transmission, workers that have frequent contact with travelers from areas with ongoing community transmission

Exposure Determination

□ Exposure Risk Categories (cont.)

■ High Exposure Risk

- Tasks with high potential for exposure to known or suspected sources of COVID-19
- Workers could include: licensed health care professionals, medical first responders, nursing home employees, law enforcement, correctional officers, or mortuary workers

■ Very High Exposure Risk

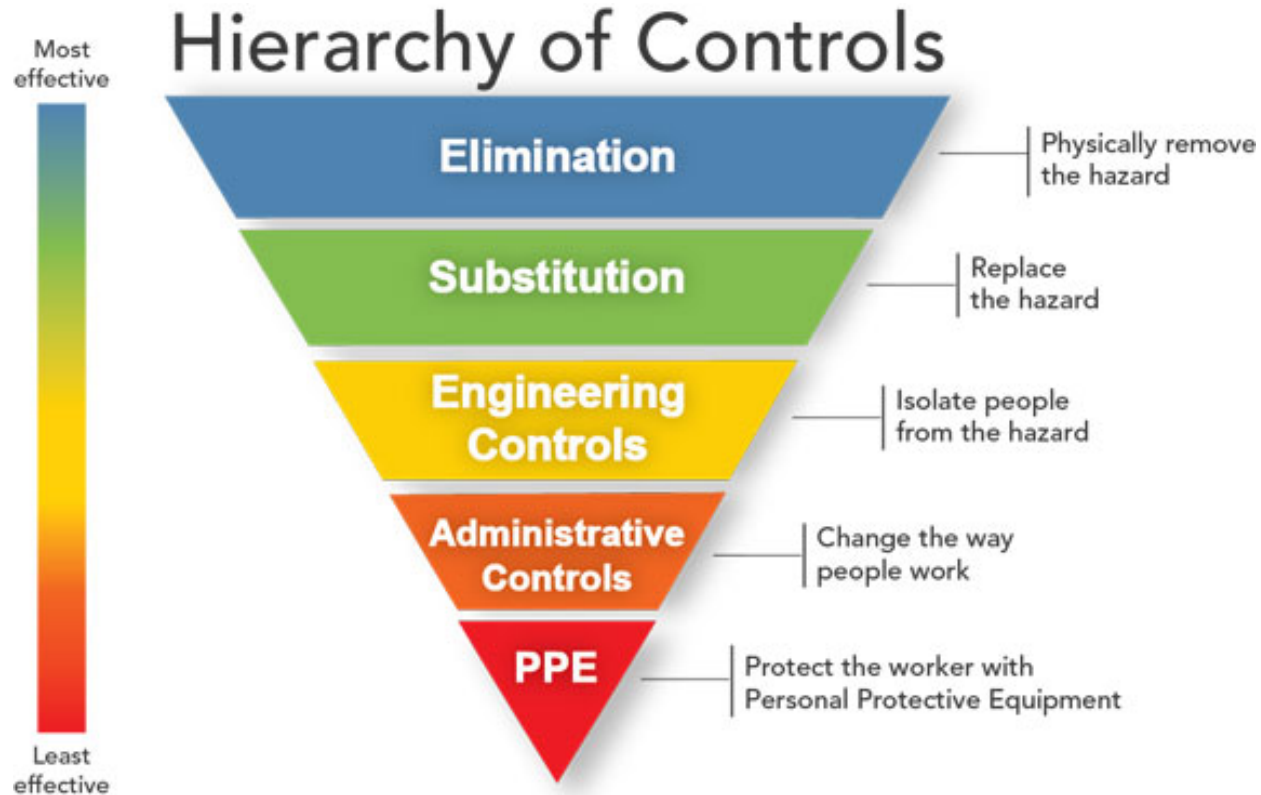

- Tasks with high potential for exposure to known or suspected sources of COVID-19 during specific medical, postmortem, or laboratory procedures
- Workers could include:
 - Healthcare workers (doctors, nurses, dentists, paramedics, EMTs) performing aerosol-generating procedures on known/suspected COVID-19 patients
 - Healthcare or Laboratory workers collecting or handling specimens from known/suspected COVID-19 patients
 - Morgue workers performing autopsies on bodies of people who are known/suspected of having COVID-19 at the time of their death

COVID-19 Preparedness & Response Plan

[MIOSHA Sample COVID-19
Preparedness & Response Plan for
Low-Med Risk Employees](#)

- ❑ Develop & Implement a written COVID-19 Preparedness & Response plan
- Use current OSHA guidance for COVID-19 - [Guidance on Preparing Workplaces for COVID-19](#)
- Use current CDC COVID-19 guidance
- The preparedness & response plan **shall** include the employee exposure determination & **shall** detail measures to prevent employee exposure, including any:
 - Engineering Controls
 - Administrative Controls
 - Basic Infection Prevention Measures
 - Person Protective Equipment
 - Health Surveillance
 - Training
- The employer **shall** make the preparedness & response plan readily available to employees & their representatives (website, internal network, or hardcopy)

COVID-19 Preparedness & Response Plan

■ Examples of Engineering Controls

- High-efficiency Air Filters
- Increased Ventilation Rates
- Physical Barriers – Clear plastic barriers, sneeze guard, plexiglass
- Installing a drive-thru window

COVID-19 Preparedness & Response Plan

- Examples of Administrative Controls
 - Restrict non-essential business travel
 - Encourage hand washing and use of hand sanitizer through posters and training
 - Promote remote work
 - Implement rotational shift schedules to reduce the number on employees onsite at the same time
 - Stagger meal and break times
 - Use posters, signs, barriers, or floor markings to reduce congestion

Basic Infection Prevention Measures

- ❑ The employer **shall**:
 - ❑ Promote frequent & thorough handwashing, including by providing workers, customers, & worksite visitors a place to wash hands; Provide antiseptic hand sanitizer or alcohol-based hand towelettes containing 60% alcohol when soap & water are unavailable
 - ❑ Require workers who are sick to not report to work or work in an isolated location
 - ❑ Prohibit workers from using other workers' phones, desks, offices, or other work tools & equipment when possible
 - ❑ Create policy prohibit in-person work for employees to the extent that their work activities can feasibly be performed remotely

Photo: U.S. Department of Defense

Basic Infection Prevention Measures (cont)

- ❑ The employer **shall**:
 - ❑ Increase facility cleaning & disinfection to limit exposure to SARS-CoV-2; focus on:
 - High touch surfaces (e.g. door handles)
 - Parts, products, and shared equipment (e.g tools, machinery, and vehicles)
 - ❑ Use EPA approved disinfectants expected to be effective against SARS-CoV-2: [List N](#)
 - ❑ Follow manufacturer's instructions for cleaning & disinfection products (e.g. concentration, application method, contact time, and PPE)

This Photo by Unknown Author is licensed under [CC BY-SA](#)

Basic Infection Prevention Measures (cont.)

General Information

■ Cleaning

- The removal of germs, dirt, and impurities from surfaces. Removes, but does not kill germs
- Use soap & water

■ Disinfecting

- The use of chemicals to kill germs on surfaces. Does not necessarily remove germs from a surface

■ Common Disinfectants

- EPA List N: Disinfectants for Coronavirus
- Bleach Solution - $\frac{1}{3}$ cup bleach per gallon water or 4 teaspoons bleach per quart water
- 70% alcohol solutions may also be used – wipes or liquid

Health Surveillance

- ❑ The employer **shall** conduct a daily entry self-screening protocol

For all employees and contractors entering the workplace

```
graph TD; A[For all employees and contractors entering the workplace] --> B[At minimum, a questionnaire that includes questions about:]; B --> C[Temperature Screening (if possible)];
```

At minimum, a questionnaire that includes questions about:

Symptoms of COVID-19

Contact with individuals known or suspected COVID-19

Temperature Screening (if possible)

Health Surveillance (cont.)

- ❑ The employer **shall**:
 - ❑ Direct employers to promptly report any signs & symptoms of COVID-19 their experiencing to the employer before OR during the work shift
 - ❑ Physically isolate any employees know or suspected to have COVID-19 from the remainder of the workforce, using measure such as, but not limited to:
 - Not allowing known/suspected cases to report to work
 - Sending know/suspected cases away from the workplace
 - Assigning known/suspected cases to work alone at a remote location (e.g. their home), as their health allows

Health Surveillance (cont.)

- ❑ When an employer learns of an employee, visitor, or customer with a known case of COVID-19, the employer **shall**:
 - ❑ Immediately notify the local public health department AND
 - ❑ Within 24 hours of learning of the known case, notify any co-workers, contractors, or suppliers who may have come into contact with the person with a known case of COVID-19
- ❑ Employer **shall** allow employees with a known/suspected case of COVID-19 return to the workplace only after:
 - ❑ The individual is no longer infectious according to the latest guidelines from the CDC AND
 - ❑ The individual is released from any quarantine or isolation order by the local public health department
- ❖ CDC Guidance for [Return to Work for Persons with COVID-19 Not in Healthcare](#)
- ❖ CDC Guidance for [Return to Work for Healthcare Personnel with COVID-19](#)

Workplace Controls

- ☐ The employer **shall** designate one or more worksite COVID-19 safety coordinator
 - ☐ COVID-19 Safety Coordinator
 - Must Implement, monitor, & report on the COVID-19 control strategies required for the worksite
 - Must remain on-site at all times when employees are present on site
 - An on-site employee may be designated to perform the COVID-19 safety coordinator role
- ☐ The employer **shall** place posters in the languages common in the employee population that encourage staying away from work when sick, cough & sneeze etiquette, and proper hand hygiene practices

Workplace Controls (cont.)

☐ The employer shall:

- ☐ Keep everyone on the worksite at least 6ft from one another and reduce congestion
 - ❖ Use ground markings, signs and physical barriers as appropriate to ensure social distancing and reduce congestions
- ☐ Provide non-medical grade face coverings to their employees
- ☐ Require face coverings when employees cannot consistently maintain 6ft of separation from others
- ☐ Consider face shields (in addition to face coverings) when employees are unable to consistently maintain 3ft of separation from others
- ☐ Require face coverings in shared spaces, including during in-person meetings and in restrooms and hallways

Personal Protective Equipment (PPE)

- ☐ The employer **shall**:
- ☐ Provide employees with types of PPE, including respirators as necessary, for protection from SARS-CoV-2 appropriate to the exposure risk associated with the job
- ☐ Ensure PPE is:
 - ☐ Properly worn
 - ☐ Used consistently
 - ☐ Regularly inspected, maintained, and/or replaced (as necessary)
 - ☐ Properly removed, cleaned, and stored or disposed of to avoid contamination to self, others, or the work environment

Preferred PPE – Use N95 or Higher Respirator

Personal Protective Equipment (cont.)

☐ In establishments that provide medical treatment or house know/suspected cases of COVID-19, the employer **shall** ensure that employees in frequent or prolonged close contact with such cases are provided with and wear, ***at a minimum***:

- ☐ N-95 respirator
- ☐ Goggles or face shield AND
- ☐ Gown

Face Coverings vs Respirators

COVID-19
FACEMASKS VS. RESPIRATORS

Cloth or Paper Face Mask

Surgical Face Mask

Filtering Facepiece Respirator (e.g. N95)

| | | | |
|------------------------|--|---|---|
| Testing & Approval | Not tested or approved, but recommended by the CDC | Cleared by the U.S. Food and Drug Administration per 21 CFR 878.4040 | Evaluated, tested and approved by NIOSH per 42 CFR Part 84 |
| Intended Use & Purpose | To prevent transmission of the virus between people in close proximity | A fluid resistant barrier designed to protect the wearer from large droplets, splashes or sprays of bodily or other hazardous fluids. | Reduces the wearer's exposure to small particle aerosols and large droplets |

COVID-19
VOLUNTARY VS. REQUIRED RESPIRATOR USE

The employer determines the necessary PPE required for the job task(s). The employer is responsible for payment, replacement, maintenance, cleaning, laundering and disposal of PPE. Training should be provided to employees regarding proper use, limitations, care and maintenance of PPE. Where respirators are provided, the following table outlines additional requirements:

Guidelines for Employees Using Respiratory Protection

| Filtering Facepiece Respirator (e.g. N95) | | |
|---|----------|-----------|
| | Required | Voluntary |
| Fit Testing | Yes | No |
| Medical Evaluation | Yes | No |
| Facial Hair Prohibited | Yes | No |
| Appendix D Provided | No | Yes |
| Training per 1910.134(k) | Yes | No |
| Cleaning, Storage & Maintenance of Respirator | Yes | Yes |

- Know the difference between cloth face coverings and respirators
- NIOSH Certified Respirators require compliance to the Respiratory Protection Program
- [Facemasks vs Respirators Factsheet](#)
- [Voluntary vs Required Respirator Use Factsheet](#)

What are Air-Purifying Respirators?

Air-purifying respirators (APRs) work by removing gases, vapors, aerosols (droplets and solid particles), or a combination of contaminants from the air through the use of filters, cartridges, or canisters. These respirators do not supply oxygen and therefore cannot be used in an atmosphere that is oxygen-deficient or immediately dangerous to life or health. The appropriate respirator for a particular situation will depend on the environmental contaminant(s).

Filtering Facepiece Respirator (FFR)

- Disposable
- Covers the nose and mouth
- Filters out particles such as dust, mist, and fumes
 - Select from N, R, P series and 95, 99, 100 efficiency level
- Does NOT provide protection against gases and vapors
- Fit testing required

Elastomeric Half Facepiece Respirator

- Reusable facepiece and replaceable cartridges or filters
- Can be used to protect against gases, vapors, or particles, if equipped with the appropriate cartridge or filter
- Covers the nose and mouth
- Fit testing required

Elastomeric Full Facepiece Respirator

- Reusable facepiece and replaceable canisters, cartridges, or filters
- Can be used to protect against gases, vapors, or particles, if equipped with the appropriate cartridge, canister, or filter
- Provides eye protection
 - More effective face seal than FFRs or elastomeric half-facepiece respirators
- Fit testing required

Powered Air-Purifying Respirator (PAPR)

- Reusable components and replaceable filters or cartridges
- Can be used to protect against gases, vapors, or particles, if equipped with the appropriate cartridge, canister, or filter
- Battery-powered with blower that pulls air through attached filters or cartridges
- Provides eye protection
- Low breathing resistance
- Loose-fitting PAPR does NOT require fit testing and can be used with facial hair
- Tight-fitting PAPR requires fit testing

Respirator Information

- MIOSHA [Part 451 Respiratory Protection](#) Key Program Elements
 - NIOSH Certified Respirators
 - Written Program – [MIOSHA Sample Program](#)
 - Medical Evaluation
 - Fit Testing
- Voluntary use respirators require a respiratory protection program
 - The respirator worn will prescribe which program elements are required for voluntary use
 - Use resources to evaluate program requirements - [OSHA Small Entity Compliance Guide to Respiratory Protection](#)
- Stay updated to temporary enforcement guidance given by [OSHA Enforcement Memos for COVID-19](#)

Employee Training

- ☐ Employer **shall** provide:
 - ☐ Training to employees on SARS-CoV-2 and COVID-19
 - ☐ Communication and training on COVID-19 infection control practices in the primary languages common in the employee population
 - ☐ Updated training if:
 - ☐ There are changes to its COVID-19 preparedness & response plan OR
 - ☐ New information becomes available about the transmission of SARS- CoV-2
- ☐ Training **shall** cover:
 - ☐ Workplace infection control practices
 - ☐ Proper use of PPE
 - ☐ Steps employees must follow to employer of COVID-19 symptoms or a suspected or confirmed case of COVID-19
 - ☐ How to report unsafe working conditions

Recordkeeping

- ☐ Employers **must** maintain a record of the following:
 - ☐ Training; maintain all COVID-19 employee training
 - ☐ Screening Protocols; maintain a record of screening for each employee or visitor entering the workplace
 - ☐ Records of Required Notifications; maintain record of notifications associated to confirmed cases of COVID-19 in the workplace (see Rule 6 for health surveillance)
- ☐ Employers **must** maintain records for one year from time of generation

MIOSHA Emergency Rules for COVID-19

ADDITIONAL
REQUIREMENTS
AND RESOURCES
FOR MEAT AND
POULTRY
PROCESSING

Daily Entry Screening Protocol (Required)

Conduct a daily entry self-screening protocol for all employees or contractors entering the workplace, including, at a minimum, a questionnaire covering symptoms and suspected or confirmed exposure to people with possible COVID-19, together with, if possible, a temperature screening.

Create at least one dedicated entry point at every facility for daily screening, described above.

Ensure physical barriers are in place to prevent anyone from bypassing the screening.

This Photo by Unknown Author is licensed under [CC BY-SA](#)

Provide Face Coverings or Disposable Masks (Required)

The employer is required to provide clean face coverings or disposable mask options for employees to use when the coverings become wet, soiled, or otherwise visibly contaminated over the course of a workday.

Ventilation Recommendations

Meat and Poultry Processing Industry

- The food industry, in addition to protecting their workers, has the added responsibility to ensure the food safety of the products they produce.
- Any HVAC modifications considered should be discussed with a qualified HVAC Contractor, to ensure they are appropriate for the site's system and compliant with food safety requirements.

Ventilation Recommendations (ASHRAE)

General/Non-Healthcare Buildings* –

- **Increase outdoor air ventilation** (disable demand-controlled ventilation and open outdoor air dampers to 100% as indoor and outdoor conditions permit)
- Improve central air and other HVAC filtration to **MERV-13 or the highest level achievable**
- Keep systems running longer hours (24/7 if possible)
- **Add portable room air cleaners with HEPA or high-MERV filters with due consideration to the clean air delivery rate (CADR)**
- Maintain temperature and humidity as applicable between 40% - 60%

***NOTE: Any HVAC modifications considered should be discussed with a qualified HVAC Contractor.**

[This Photo](#) by Unknown Author is licensed under [CC BY-SA](#)

Ventilation Recommendations (ACGIH Industrial Ventilation Committee)

General Industrial site HVAC systems* -

- **Increase the amount of outdoor air supplied by the system to the maximum capacity permitted** by the system. Additional considerations include climate and local air quality (e.g., humidity)
- If air is recirculated, a **MERV 13 or better filter** (system permitting) is recommended to improve the capture of infectious aerosols.
- Depending on the actual air exchange rate and number of occupants, it may be appropriate to **operate the HVAC system for an extended period of time, after all occupants have departed**, to ensure adequate clearance of infectious particles.
- **Avoid having personal or pedestal fans blow from one person to another.**

*NOTE: Any HVAC modifications considered should be discussed with a qualified HVAC Contractor.

Ventilation Recommendations*

(ACGIH Industrial Ventilation Committee) – (Cont.)

- **Provide additional dilution ventilation** – Introduce at low velocities at floor level whenever possible, with directed flow toward exhaust fans above, and spread over large areas.
- Allow the ventilation system to operate continuously if the building is occupied or long enough to allow for several complete air changes following the departure of all building occupants.
- If the system is shut down or set back overnight, return to full operating conditions prior to occupant return.
- **Make sure restroom fans operate continuously** and are exhausted directly outdoors with exhausts away from facility ventilation supply intakes.
- Temporarily disable or **discontinue use of hand dryers in restrooms** and replace with disposable paper towels.

***NOTE: Any HVAC modifications considered should be discussed with a qualified HVAC Contractor.**

Operations Recommendations

- Reduce processing capacity or
- Modify the processing or production lines and/or
- Stagger workers across shifts to minimize the number of employees in the facility at any one time.
- Group employees together in cohorts, if feasible, in a manner that allows a group of employees to be assigned to the same shifts with the same coworkers, so as to minimize contacts between employees in each cohort.

Workplace Recommendations

- Stagger employees' arrival, departure, break, and lunch times to avoid congregations of employees in parking areas, locker rooms, lunch areas, and near time clocks.

Recommended Policies & Procedures – Sick and Leave

- Adopt sick leave policies that discourage employees from entering the workplace while sick and modify any incentive programs that penalize employees for taking sick leave.
- If an employee becomes or reports being sick, disinfect the workstation used and any tools handled by the employee.

Exposure to COVID-19 in Meat, Poultry, and
Pork Processing and Packaging Facilities

(poster available in 17 different languages)

9 Steps to Reducing Worker Exposure to COVID-19 in Meat, Poultry, and Pork Processing and Packaging Facilities

Keep you and the people working around you safe.
Take these steps even if you have no symptoms of COVID-19.

- 1** Stay home if you are sick. 
 - 2** Maintain at least six feet physical distance between co-workers. 
 - 3** Avoid group gatherings during work breaks, even if outside. 
 - 4** Install partitions along the production line to achieve physical distance. 
 - 5** Avoid sharing equipment and tools. Regularly clean tools and equipment that must be shared. 
 - 6** Use soap and water for handwashing. 
 - 7** Wear protective equipment for general safety and to limit the spread of the virus. 
 - 8** Report any safety and health concerns to your supervisor, or to OSHA. 
 - 9** Avoid carpooling to and from work, if possible. 
- Stay current on public health recommendations. For more information, visit www.osha.gov/coronavirus or call 1-800-321-OSHA (6742).

Meat and Poultry Processing Facilities:

Key Strategies to Prevent COVID-19 Infection among Employees

Accessible version: <https://www.cdc.gov/loss/articles/2021-02-01/covid-19-prevention-strategies-for-meat-poultry-processing-workers-employees.html>

Employees should assess their workplace for factors that might increase the risk of spreading COVID-19. Develop a health and safety plan using the following prevention guidance. Reach out frequently to [state](#) and/or [local](#) public health officials and occupational safety and health professionals to get relevant and up-to-date information concerning COVID-19 in your area.

- **Keep employees at least 6 feet away from each other as much as possible (encourage social distancing).** Use physical barriers or partitions, reduce staffing, or modify workstations or work procedures to increase the distance between employees. Add additional clock in/out stations, space out chairs in break rooms, and add outside tents for breaks.

- **Encourage sick employees to stay home.** Develop policies that allow sick employees to stay at home without loss of incentives. Ensure employees are aware of and understand these policies. Work with occupational medicine professionals to develop policies for workers who may be at increased risk related to COVID-19.

- **Increase frequency of cleaning and disinfection and make sure there is adequate ventilation in shared spaces.** **Clean and disinfect** tools or other equipment at least as often as employees change workstations. Disinfect frequently touched surfaces in workspaces, break rooms, and shuttle buses or vans if used, at the end of each shift, or more frequently. Redirect or remove fans to prevent air from blowing directly from one worker to another. If fans are removed, employers should take steps to prevent **heat hazards**.

- **Encourage employees to practice social distancing.** Stagger break times and arrival and departure times. Place visual reminders (floor markings and signs) where employees might gather, including work areas, break areas, locker rooms, halls or corridors, and entrances and exit areas. Encourage employees to avoid carpooling to and from work. If carpooling is necessary, limit the number of people per vehicle as much as possible. This may require using more vehicles. Encourage employees in a shared van or car space to **wear cloth face coverings**.

- **Consider providing cloth face coverings and/or face shields.** Ensure face coverings are worn properly (snugly over the nose and mouth). Provide washable coverings with multiple layers of fabric. Replace when wet, dirty, or contaminated. Face coverings are not a substitute for recommended or required PPE such as respirators or medical facemasks. Train employees on how to put on and take off PPE without contaminating themselves. Clean and disinfect face shields after each shift if used. Make sure face shields extend past the chin and wrap around the sides of the face.

- **Promote proper hand hygiene.** Provide access to running water, soap, paper towels, and trash cans (no-touch trash cans if available). Have employees **wash hands** for at least 20 seconds. Place hand washing or hand sanitizer stations in multiple locations. Provide alcohol-based hand sanitizer that contains at least 60% alcohol.

- **Educate and train employees and supervisors on how they can reduce the spread of COVID-19.** Cover topics like **staying home when sick**, **social distancing**, how to wear **cloth face coverings**, and proper **hand hygiene**. Provide materials in an easy to understand format and in appropriate languages. CDC has **posters** available for download.
