

Support middle school after-school programming with Computer Science Discoveries.

In the past year, Michigan educators have improvised, innovated and adapted to keep our students learning.

The MiSTEM Network will help you continue that learning this summer with innovative programs to empower educators and accelerate student achievement across reading, math and science.

We have a rich offering of hands-on, project-based STEM learning experiences that can take you through the summer – and even in-school or after-school programs in the fall.

FEATURED PROGRAM

Professional Learning: Computer Science Discoveries for Middle Schoolers

Free customizable curriculum for those just getting started in learning how to implement lessons and powerful teaching strategies.

Teachers receive training, right in time for the fall semester.

- No need for a substitute; training is available during the summer
- Teachers receive a stipend and SCECHs
- Online workshops available

Apply for Innovation Funds in HB4048 for this **STEM-based opportunity** that may qualify for an extra \$100 per student!
