POWER FACTOR CLAUSE: The rates and charges under this tariff are based on the customer maintaining a power factor of not less than 85% lagging. Power factor less than 70% will not be permitted and the customer will be required to install at his own expense such corrective equipment as may be necessary to improve power factor. A penalty will be applied to the total amount of the monthly billing for electric service for power factor below 85% lagging in accordance with the table in Power Factor Determination, Schedule Designation B-4.5. The Power Factor Clause shall not be applied to the on-peak billing demand ratchet nor to the minimum contract demand, but will be applied to metered quantities.

SPECIAL TERMS AND CONDITIONS: The contract capacity, however established, shall not be decreased during the term of the contract and subsequent renewal periods as long as service is required unless there is a specific reduction in connected load.

Customer owned equipment must be operated so that voltage fluctuations on the primary distribution system of the Company shall not exceed permissible limits.

Customers with large storm pumping facilities will be permitted to transfer to the Secondary Pumping Rate (E5) if their storm pumping horsepower is at least 60% of their total connected load.

CONTRACT TERM: The term is five years, extending thereafter from month-to-month until terminated by mutual consent or on twelve months' written notice by either party, which may be given at any time after the end of the fourth year. Where special services are required, the term will be as specified in the applicable contract rider.

Issued: April 1, 1983
By: E. L. Grove, Jr.
Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on and after April 1, 1983 under authority of Order of the Michigan Public Service Commission dated March 31, 1983 in Case U-6949.

PRIMARY PUMPING RATE-Continued

MONTHLY BILLING DEMAND: The daily on-peak demand is the highest 30-minute integrated reading of the demand meter in each day, subject to Schedule of On-peak Hours B-4.4. To this shall be added one-third of the amount by which it is exceeded by the highest single demand occurring during the off-peak hours on the same calendar day. The weekly billing demand is the highest of the daily demands established on seven-day intervals commencing with the first day of the billing period. The monthly billing demand is the average of the four weekly demands. (The period after the first 21 days of each month being considered to be the fourth week.) In no event will the monthly billing demand be less than 50% of the highest monthly billing demand computed above during the calendar months of June through October established during the preceding eleven calendar months, nor less than 50% of the contract capacity nor less than 50 kilowatts.

ON-PEAK HOURS: See Schedule Designation B-4.4.

MINIMUM CHARGE: The billing demand charge, plus the service charge. The Power Factor Clause shall not operate to increase the monthly minimum charge.

POWER FACTOR CLAUSE: The rates and charges under this tariff are based on the customer maintaining a power factor of not less than 85% lagging. Power factor less than 70% will not be permitted and the customer will be required to install at his own expense such corrective equipment as may be necessary to improve power factor. A penalty will be applied to the total amount of the monthly billing for electric service for power factor below 85% lagging in accordance with the table in Power Factor Determination, Schedule Designation B-4.5. The Power Factor Clause shall not be applied to the on-peak billing demand ratchet nor to the minimum contract demand, but will be applied to metered quantities.

SPECIAL TERMS AND CONDITIONS: The contract capacity, however established, shall not be decreased during the term of the contract and subsequent renewal periods as long as service is required unless there is a specific reduction in connected load.

Customer owned equipment must be operated so that voltage fluctuations on the primary distribution system of the Company shall not exceed permissible limits.

Customers with large storm pumping facilities will be permitted to transfer to the Secondary Pumping Rate (E5) if their storm pumping horsepower is at least 60% of their total connected load.

CONTRACT TERM: The term is five years, extending thereafter from month-to-month until terminated by mutual consent or on twelve months' written notice by either party, which may be given at any time after the end of the fourth year. Where special services are required, the term will be as specified in the applicable contract rider.

FUEL ADJUSTMENT AND PURCHASED POWER ADJUSTMENT: The energy charge is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: The Service Charge.

CONTRACT TERM: One year, extending thereafter until terminated by mutual consent or with 60 day written notice. Where special services are required, the term will be specified in the applicable contract rider.

POWER FACTOR CLAUSE: This rate is based on the customer maintaining a power factor of not less than 85% lagging. A power factor of below 70% will not be permitted and the customer will be required to install at his own expense the necessary corrective equipment to improve power factor. A penalty will be applied to the total monthly billing for power factors below 85% in accordance with the table in Power Factor Determination, Schedule Designation B-4.5.

Issued: July 21, 1981
By: E. L. Grove, Jr.
Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on and after July 23, 1981 under authority of Order of the Michigan Public Service Commission dated July 21, 1981 in Case U-6488.

Rate Schedule No. E5

Secondary Pumping Rate

AVAILABILITY OF SERVICE: Available to governmental agencies desiring service at secondary voltage for pumping and to governmental agencies with service at primary voltage having the storm pumping horsepower that is at least 60% of the total connected load. This rate is not available to installations, other than storm pumping, having a demand of over 1,000 kilowatts and not taking service on this rate prior to August 19, 1972.

HOURS OF SERVICE: 24 hours.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase and three-phase four-wire Y connected at 208Y/120 volts, or under certain conditions three-phase four-wire, Y connected at 480Y/277 volts.

In certain city districts, alternating current is supplied from a Y connected secondary network from which 120/208 volt three-wire service may be taken.

RATE PER MONTH:

Service Charge:

\$10.85 per customer per month, plus

An energy charge per kilowatthour of:

7.308¢ per kWh for all kWh

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

CONTRACT TERM: Open order, terminable on three days' written notice by either party.

MINIMUM CHARGE: The Service Charge.

2000 Second Avenue
Detroit, Michigan 48226

Effective for service rendered on and after January 24, 1988, under authority of order of the Michigan Public Service Commission dated January 12, 1988 in Case U-7660.

SECONDARY PUMPING RATE

AVAILABILITY OF SERVICE: Available to governmental agencies desiring service at secondary voltage for pumping and to governmental agencies with service at primary voltage having the storm pumping horsepower that is at least 60% of the total connected load. This rate is not available to installations, other than storm pumping, having a demand of over 1,000 kilowatts and not taking service on this rate prior to August 19, 1972. Standby service not available under this rate.

HOURS OF SERVICE: 24 hours.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase and three-phase four-wire Y connected at 208Y/120 volts, or under certain conditions three-phase four-wire, Y connected at 480Y/277 volts.

In certain city districts, alternating current is supplied from a Y connected secondary network from which 120/208 volt three-wire service may be taken.

RATE PER MONTH:

Service Charge:

\$9.35 per customer per month, plus
An energy charge per kilowatthour of:
8.25¢ per kWh for all kWh

SURCHARGE ADJUSTMENT: .0408¢ per kWh for all kWh.

1986 TAX REFORM ACT SURCHARGE: -.205¢ per kWh for all kWh.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

CONTRACT TERM: Open order, terminable on three days' written notice by either party.

MINIMUM CHARGE: The Service Charge.

Effective on service rendered on and after July 23, 1981 under authority of Order of the Michigan Public Service Commission dated July 21, 1981 in Case U-6488.

STANDARD CONTRACT RIDER NO. 1
ELECTRIC MELTING

APPLICABLE TO: Primary Supply Rate. Schedule Designation D6

Customers operating electric furnaces for melting any substance or mineral and/or the electric use consumed in holding operations and taking their supply at either of the above rate(s) and who provide special circuits for the furnaces so that the Company may install necessary meters may take service under this Rider subject to Rule B2.4-Choice of Rates.

RATE PER MONTH: An energy charge per kilowatthour of:
8.07¢ per kilowatthour

NUCLEAR DECOMMISSIONING SURCHARGE: .00660¢ per kWh for all kWh.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

WHEN SERVICE IS SUPPLIED UNDER AN APPLICABLE RATE: The customer will be charged the applicable rate for the non-furnace load, plus the above rate for furnace consumption.

MINIMUM CHARGE: A monthly minimum charge of \$2.10 per kW of furnace contract capacity shall be applied to that portion of the customer's load which is served under this Rider. This minimum charge is in addition to the minimum charge under the above rate(s).

CONTRACT TERM: This rate is made effective by a rider modifying the contract form prescribed for one of the applicable filed rate(s) listed above.

FURNACE CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet their normal maximum furnace requirements, but not less than 75 kilowatts. The Company undertakes to provide the necessary facilities for a supply of electric power from its primary distribution system at the contract capacity. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The furnace contract capacity shall not be included in the contract capacity established for the filed rate which is used in conjunction with this Rider.

WHEN SERVICE IS SUPPLIED UNDER AN APPLICABLE RATE: The customer will be charged the applicable rate for the non-furnace load, plus the above rate for furnace consumption.

MINIMUM CHARGE: A monthly minimum charge of \$2.05 per kW of furnace contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge is in addition to the minimum charge under the above rates.

CONTRACT TERM: This rate is made effective by a rider modifying the contract form prescribed for one of the applicable filed rates listed above.

FURNACE CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet their normal maximum furnace requirements, but not less than 75 kilowatts. The Company undertakes to provide the necessary facilities for a supply of electric power from its primary distribution system at the contract capacity. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The furnace contract capacity shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

STANDARD CONTRACT RIDER NO. 1
ELECTRIC FURNACE RIDING

APPLICABLE TO:

Primary Supply Rate
Bulk Power Rate

Schedule Designation D6
Schedule Designation D7

Customers operating electric furnaces for metal melting or for the reduction of metallic ores and taking their supply at either of the above rates and who provide special circuits for the furnaces so that the Company may install necessary meters may take service under this Rider subject to Rule B2.4-Choice of Rates.

RATE PER MONTH: An energy charge per kilowatthour of:
6.71¢ per kilowatthour

INTERIM SURCHARGE ADJUSTMENT: .538¢ per kWh for all kWh.

FUEL ADJUSTMENT AND PURCHASED POWER ADJUSTMENT: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CIRCUMSTANCES: As approved by the Commission. See Schedule Designation B-4.9.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

WHEN SERVICE IS SUPPLIED UNDER AN APPLICABLE RATE: The customer will be charged the applicable rate for the non-furnace load, plus the above rate for furnace consumption.

MINIMUM CHARGE: A monthly minimum charge of \$1.65 per kW of furnace contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge is in addition to the minimum charge under the above rates.

CONTRACT TERM: This rate is made effective by a rider modifying the contract form prescribed for one of the applicable filed rates listed above.

FURNACE CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet their normal maximum furnace requirements, but not less than 75 kilowatts. The Company undertakes to provide the necessary facilities for a supply of electric power from its primary distribution system at the contract capacity. EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF
FOR CUSTOMER-PROCURED POWER

1. DEFINITIONS

"Commission" means the Michigan Public Service Commission.

"Company" means The Detroit Edison Company.

"Company's Distribution System" means facilities operated by the Company for the purpose of distributing Power within the Company's electric service territory, which are subject to the jurisdiction of the Commission.

"Company's Transmission System" means facilities operated by the Company for the purpose of transmitting Power within the Company's electric service territory which are subject to the jurisdiction of the Federal Energy Regulatory Commission.

"Customer" means, for purposes of Experimental Retail Access Service, an entity with electrical Load facilities connected to the Company's Distribution System that purchases or receives Power from a Retailer or Marketer and which power is delivered to its Location(s) pursuant to this tariff. All retail Customers, regardless of the voltage level of the service, are considered to be connected to the Company's Distribution System.

"Distribution Contract Capacity" means the Load carrying capacity in kilowatts of the Company's Distribution System necessary to meet a Customer's maximum Load requirements at a particular Location served under this tariff.

"Distribution Point of Delivery" means the point of interconnection between the Company's Distribution System and the Customer's service Location.

"Distribution Point of Receipt" means the point of interconnection between the Company's Transmission and Distribution Systems.

"Economic Development" means new loads that are served as part of an expansion of economic activity within the state that promote Michigan's business climate.

"Load" means electric demand measured in kilowatts (kW).

"Location" means each Customer facility whether owned or leased.

"Marketer" means an entity that:

- (i) generates, brokers, markets or otherwise procures Power to be supplied to the Company at the Transmission Point of Receipt, obtains transmission services as the designated agent of the Customer, and with whom a Customer or a Customer's Retailer has arranged for the receipt of Power,
- (ii) satisfies all applicable franchise, statutory and regulatory requirements of Michigan and Federal law.

2000 Second Avenue
Detroit, Michigan 48226

Effective for service rendered on
and after March 8, 1999 under
authority of order of the Michigan
Public Service Commission in Case
No. U-10840 dated March 8, 1999

**EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF
FOR CUSTOMER-PROCURED POWER – continued**

"Open Access Transmission Tariff (OATT)" means the Company's pro forma Open Access Transmission Tariff on file with the Federal Energy Regulatory Commission, as amended from time to time.

"Power" means a combination of the electric demand and energy requirements of the Customer.

"Retailer" means an entity that:

- (i) sells or procures power for a Customer. The Power sold or procured by the Retailer is supplied to the Company for delivery to a Customer.
- (ii) satisfies all applicable franchise, statutory and regulatory requirements of Michigan and Federal law.

"Self-service" means a process by which a Customer will utilize excess capacity from its existing generating capabilities at one geographic location in order to serve its own facilities at another geographic location.

"Transmission Point of Delivery" means the point of interconnection between the Company's Transmission and Distribution Systems.

"Transmission Point of Receipt" means the point on the Company's Transmission System where Power is received by the Company for delivery to the Transmission Point of Delivery.

2. TERMS AND CONDITIONS OF SERVICE

2.1 This Experimental Retail Access Service Tariff sets forth the rates, charges, terms and conditions of service for the delivery of Power procured by a Customer from a source other than the Company.

2.2 Power received by the Company from a Marketer or from the Customer's Self-service generation shall be transmitted across the Company's Transmission System to the Company's Distribution System in accordance with the rates, terms and conditions of service of the Company's Open Access Transmission Tariff.

2.3 A Customer's eligibility to take Experimental Service under this tariff is subject to the full satisfaction of any terms or conditions imposed by preexisting contracts or tariffs with the Company. Customers must have satisfied any past due amounts owed to the Company under any other arrangements or provisions for electric service before taking service under this tariff. Rider No. 2 agreements between the Customer and the Company will remain in effect during service under this tariff.

2.4 A Customer will specify only one Retailer and/or one Marketer at any given time for the supply of Power to each separately metered Load. Separately metered Loads at a single Location that are at the same service voltage may be combined for the purpose of integrating the demands. If this is done, the combined Load can only be served by a single Retailer and/or Marketer.

**EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF
FOR CUSTOMER-PROCURED POWER – continued**

2.5 If a Retailer or Marketer fails to pay amounts due the Company or otherwise fails to perform obligations undertaken in connection with service to a Customer, the Company will give the Customer notice of the Retailer's or Marketer's default. The Customer acknowledges that Experimental Retail Access Service may be terminated if the Customer, its Retailer, or its Marketer fails to pay amounts due the Company or otherwise fails to comply with the provisions of this tariff or agreements with the Company. Unless the Customer, Retailer or Marketer cures the default with the Company or the Customer changes its Retailer or Marketer in accordance with Company rules, the Customer may be transferred to service under the Company's full requirements tariffs subject to the provisions of Section 5.1.

2.6 Experimental Retail Access Service is not available to Customers for Lighting service utilizing Company-owned equipment.

2.7 The responsibilities of Retailers, Marketers or Customers may be undertaken or performed by one or more entities, provided the qualification requirements for each such function set forth in this tariff are met.

3. CHARACTER OF SERVICE

3.1 For Customers taking service under this tariff, the Company will furnish three-phase alternating current service at a nominal frequency of 60 hertz. The distribution service provided under this tariff shall be firm. In the event that distribution service must be curtailed in order to maintain safe and reliable operation of the Company's system, Customers taking service under this tariff will be treated comparably with the Company's firm service full requirements customers. Therefore, whenever it may be possible to do so, any curtailments of service shall be treated proportionally between Customers taking service under this tariff, the Company's full requirements customers, and other customers that may be taking firm service from the Company. To the extent possible, the Company will notify Customers in a timely manner of any scheduled or anticipated service curtailments. When the Company determines that an electrical emergency exists on its system and implements emergency procedures to curtail firm service, the Customer shall make the required reductions upon request of the Company. However, the Company reserves the right to curtail, in whole or in part, firm service under this tariff when an emergency or other unforeseen condition impairs or degrades the reliability of its system.

4. AVAILABILITY OF SERVICE

4.1 This tariff is available for the delivery of Power procured by the Customer from a source other than the Company. Service will only be provided at 24,000 Volts or higher.

4.2 The nominal amount of capacity available under this tariff is 90,000 kilowatts. To be eligible for service under this tariff, the applicant for service must have a minimum site demand of 2,000 kilowatts.

4.3 Allocation of available capacity shall be according to the following priority: (1) Self-service, (2) Economic Development, and (3) all others.

4.4 A Customer shall contract for a specified capacity of not less than 2,000 kilowatts sufficient to meet the Customer's maximum demand under this tariff.

authority of order of the Michigan
Public Service Commission in Case
No. U-10840 dated March 8, 1999

EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF FOR CUSTOMER-PROCURED POWER – continued

5. TERM AND COMMENCEMENT OF SERVICE

5.1 Customers may take service under this tariff until June 30, 2004 or as may be extended by the Commission. If the Customer desires to transfer to a different rate or tariff before June 30, 2004, the Customer must give 6 months notice prior to taking service under any rate or tariff for which it qualifies. However, the Customer may transfer within the notice period provided that for the balance of the 6-month period the Customer's Load involved in such change will be served from incremental generation or power supply resources beyond those required to serve other retail Customers. Instead of assessing the Customer for power supply charges under the Company's power supply cost recovery clause, the incremental power supply costs will be assigned to the Customer in addition to the other charges provided by the tariff to which the Customer transfers. During the 6-month notice period, Customers transferring to a different rate or tariff may also be subject to interruption to maintain system integrity.

5.2 Experimental Retail Access Service may not commence until metering has been installed as specified in the tariff and the Company has received an executed Transmission Service Agreement and other agreements as specified in Section 7.

5.3 Either the Customer, the Customer's Marketer or the Customer's Retailer must i) have a valid Certificate of Convenience and Necessity issued by the Commission, and ii) have a valid franchise authorizing the Customer, Retailer or Marketer to conduct business in each community in which Power is to be delivered. All participating entities must comply with all franchise, statutory and regulatory requirements of state and federal law and must enter into agreements satisfactory to the Company for the provision and exchange of Customer information associated with service under this tariff.

6. RATES AND CHARGES

Description of Charges

6.1 **Service Charge:** The Service Charge shall apply to each Location served under this tariff.

6.2 **System Use Charge:** The System Use Charge shall be the product of the applicable rate and the Customer's maximum demand, at each voltage level, for each Location. The maximum demand shall be the highest 30-minute integrated kW demand created during the previous 12 billing months at each voltage level (whether the Customer received service under this tariff or a Detroit Edison retail tariff or contract), including the current month but not less than 50% of Distribution Contract Capacity.

6.3 **Distribution Contract Capacity:** Customers shall contract for an amount of capacity sufficient to meet the maximum requirements of the Load connected to the Company's Distribution System at the Customer's Location. Customers not having previously established service requirements shall contract with the Company for a specified Distribution Contract Capacity in a kilowatt amount sufficient to meet maximum requirements for each Location. Customers having previously established contract capacities prior to transferring from bundled, full requirements service to Experimental Retail Access Service shall have their Distribution Contract Capacity set at their existing contract capacity for each Location at each voltage level. The Company will provide the necessary facilities to deliver Power from its distribution system at the Distribution Contract Capacity. Subject to the provisions of the Company's Rules, any incremental cost incurred by the Company to provide the necessary facilities to meet the Customer's increased demand for distribution services over the Distribution Contract Capacity existing when service commences under this tariff shall be the responsibility of the Customer.

Executive Vice President
and Chief Financial Officer
2000 Second Avenue
Detroit, Michigan 48226

Effective for service rendered on
and after March 8, 1999 under
authority of order of the Michigan
Public Service Commission in Case
No. U-10840 dated March 8, 1999

**EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF
FOR CUSTOMER-PROCURED POWER – continued**

Once established, the Distribution Contract Capacity shall not decrease during the contract term unless there is a specific permanent reduction in connected Load. Any single 30-minute integrated reading of the demand meter in any month that exceeds the Distribution Contract Capacity then in effect shall become the new Distribution Contract Capacity.

6.3.1 Initial Contract Capacity: Initial Contract Capacity is that value used to determine the level of participation in this Experimental Retail Access Service offer. For existing Locations or existing separately metered Loads, that amount will be equal to the Customer's previously established contract capacity prior to transferring from full requirements service to this Experimental Retail Access Service. For new Customer Locations or for newly metered Load, this value will be estimated.

6.4 Substation Charge: The Substation Charge shall apply to Customers who are provided service through transformation equipment and appurtenances related to voltage transformation owned by the Company. The Substation Charge shall be the product of the applicable rate and the Customer's Distribution Contract Capacity.

6.5 Nuclear Decommissioning Charge: This charge provides for the cost of decommissioning the Fermi 2 Nuclear Power Plant when its operating license expires.

6.6 Securitization Bond Charge: This charge represents the payment of principal and interest associated with the issuance of securitization bonds as well as recovery of certain servicing and administrative costs. The issuance of the bonds and this charge was authorized by the MPSC in Case U-12478 and allows for the recovery of qualified costs in accordance with the Electric Choice and Electric Reliability Act of 2000.

6.7 Securitization Bond Tax Charge: This charge represents the recovery of the income tax liability incurred by the Company arising from its collection of the Securitization Bond principal payments.

6.8 Transition Charge: This charge represents the difference between the sum of the previously authorized charges (SFAS 106 Charge, SFAS 109 Charge and Fermi 2 Charge) and the sum of the Securitization Bond and Securitization Bond Tax Charges, the effect being that the sum of the Securitization Bond Charge, the Securitization Bond Tax Charge and the Transition Charge is equal to the sum of SFAS 106 Charge the SFAS 109 Charge and the Fermi 2 Charge.

6.9 Power Factor and Excess kVAR Demand Charge: The Company maintains distribution system design standards based upon normal operating efficiency levels. Excessive deviations from Power Factor design limits shall be subject to penalty and, if the Customer's power factor is less than 70%, shall require the Customer to take corrective action.

6.10 Special Purpose Facilities and Services: Special purpose facilities and services requested by the Customer may be provided by the Company under separate agreement.

Public Service Commission in Case
No. U-13534 dated November 4, 2003.

(To reflect introduction of securitization charges.

**EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF
FOR CUSTOMER-PROCURED POWER – continued**

Once established, the Distribution Contract Capacity shall not decrease during the contract term unless there is a specific permanent reduction in connected Load. Any single 30-minute integrated reading of the demand meter in any month that exceeds the Distribution Contract Capacity then in effect shall become the new Distribution Contract Capacity.

6.3.1 Initial Contract Capacity: Initial Contract Capacity is that value used to determine the level of participation in this Experimental Retail Access Service offer. For existing Locations or existing separately metered Loads, that amount will be equal to the Customer's previously established contract capacity prior to transferring from full requirements service to this Experimental Retail Access Service. For new Customer Locations or for newly metered Load, this value will be estimated.

6.4 Substation Charge: The Substation Charge shall apply to Customers who are provided service through transformation equipment and appurtenances related to voltage transformation owned by the Company. The Substation Charge shall be the product of the applicable rate and the Customer's Distribution Contract Capacity.

6.5 Nuclear Decommissioning Charge: This charge provides for the cost of decommissioning the Fermi 2 Nuclear Power Plant when its operating license expires.

6.6 Securitization Bond Charge: This charge represents the payment of principal and interest associated with the issuance of securitization bonds as well as recovery of certain servicing and administrative costs. The issuance of the bonds and this charge was authorized by the MPSC in Case U-12478 and allows for the recovery of qualified costs in accordance with the Electric Choice and Electric Reliability Act of 2000.

6.7 Securitization Bond Tax Charge: This charge represents the recovery of the income tax liability incurred by the Company arising from its collection of the Securitization Bond principal payments.

6.8 Transition Charge: This charge represents the difference between the sum of the previously authorized charges (SFAS 106 Charge, SFAS 109 Charge and Fermi 2 Charge) and the sum of the Securitization Bond and Securitization Bond Tax Charges, the effect being that the sum of the Securitization Bond Charge, the Securitization Bond Tax Charge and the Transition Charge is equal to the sum of SFAS 106 Charge the SFAS 109 Charge and the Fermi 2 Charge.

6.9 Power Factor and Excess kVAR Demand Charge: The Company maintains distribution system design standards based upon normal operating efficiency levels. Excessive deviations from Power Factor design limits shall be subject to penalty and, if the Customer's power factor is less than 70%, shall require the Customer to take corrective action.

6.10 Special Purpose Facilities and Services: Special purpose facilities and services requested by the Customer may be provided by the Company under separate agreement.

No. U-12478 dated November 2, 2000.

**EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF
FOR CUSTOMER-PROCURED POWER – continued**

Once established, the Distribution Contract Capacity shall not decrease during the contract term unless there is a specific permanent reduction in connected Load. Any single 30-minute integrated reading of the demand meter in any month that exceeds the Distribution Contract Capacity then in effect shall become the new Distribution Contract Capacity.

6.3.1 Initial Contract Capacity: Initial Contract Capacity is that value used to determine the level of participation in this Experimental Retail Access Service offer. For existing Locations or existing separately metered Loads, that amount will be equal to the Customer's previously established contract capacity prior to transferring from full requirements service to this Experimental Retail Access Service. For new Customer Locations or for newly metered Load, this value will be estimated.

6.4 Substation Charge: The Substation Charge shall apply to Customers who are provided service through transformation equipment and appurtenances related to voltage transformation owned by the Company. The Substation Charge shall be the product of the applicable rate and the Customer's Distribution Contract Capacity.

6.5 Nuclear Decommissioning Charge: This charge provides for the cost of decommissioning the Fermi 2 Nuclear Power Plant when its operating license expires.

6.6 SFAS106 Charge: This charge represents the amortization of a transition cost due to changing the method of accounting for employee post-retirement benefits. The obligation to pay future benefits has already accrued as part of the compensation package of Company employees for past services.

6.7 SFAS 109 Charge: This charge represents a transition cost due to a timing difference in the recognition of tax benefits.

6.8 Fermi 2 Charge: In a December, 1998 order, the Commission authorized a revenue requirement reduction and an accelerated amortization of Fermi 2. The Fermi 2 Charge presented in this rate schedule reflects the net effect of the revenue requirement reduction on the Fermi 2 Charge previously authorized by the Commission in its order dated April 14, 1998 in Case No. U-10840.

6.9 Power Factor and Excess kVAR Demand Charge: The Company maintains distribution system design standards based upon normal operating efficiency levels. Excessive deviations from Power Factor design limits shall be subject to penalty and, if the Customer's power factor is less than 70%, shall require the Customer to take corrective action.

6.10 Special Purpose Facilities and Services: Special purpose facilities and services requested by the Customer may be provided by the Company under separate agreement.

(To reflect revised securitization bond charges, revised transition charge and removal of the Equalization Adjustment)

**EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF
FOR CUSTOMER-PROCURED POWER – continued**

Application of Charges

6.11 Minimum Charge: The Customer is subject to a minimum monthly charge equal to the sum of the Service Charge, the System Use Charge and the Substation Charge, if applicable.

6.12 Distribution Service: Customers receiving Experimental Retail Access Service shall pay the Company a rate computed as the sum of the following charges:

	<u>24 or 41.6kV</u>	<u>120kV and above</u>
Service Charge (\$/month*)	\$450	\$450
System Use Charge (\$/kW/month*)	\$0.57	\$0.24
Substation Charge (\$/kW/month*)	\$0.36	\$1.18
Nuclear Decommissioning Charge (¢/kWh)	0.06985¢	0.06985¢
Securitization Bond Charge (¢/kWh)	<u>0.37400¢</u>	<u>0.37400¢</u>
Securitization Bond Tax Charge (¢/kWh)	<u>0.09900¢</u>	<u>0.09900¢</u>
Transition Charge (¢/kWh)	<u>0.40000¢</u>	<u>0.40000¢</u>

*Month refers to a billing month, usually 28–34 days. Bills representing longer or shorter periods would be pro-rated.

6.13 Power Factor and Excess kVAR Demand: Power factors of less than 70% are not permitted and necessary corrective equipment must be installed by the Customer to correct to a minimum level of 70%. Power factor and excess kVAR demand charges will be calculated at each Customer Location at the time of the Location's single highest 30-minute integrated kW reading of the demand meter during the on-peak hours of the billing period (those hours being from 7am until 11pm consistent with the Company's Open Access Transmission Tariff). Excess kVAR demand is any kVAR demand resulting from operations below 85% power factor. A monthly charge of \$3.50/kVAR will be applied to excess kVAR demand.

**EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF
FOR CUSTOMER-PROCURED POWER – continued**

7. METERING, BILLING AND PAYMENT

7.1 Metering: Load served under this tariff shall be separately metered by meters capable of measuring and recording kW demands and kVAR demands on a 30-minute integrated basis and measuring energy on a kWh basis. Metering equipment for Customers taking Experimental Retail Access Service shall be furnished, installed, read, maintained and owned by the Company. The Company requires access to the Customer's telephone line for purposes of meter interrogation. If a Customer is not able to allow sharing of the telephone line, the Customer shall obtain a separate telephone line for such purposes and shall pay all charges in connection therewith. The Customer is responsible for assuring the performance of the telephone line. If the telephone line used for metering is out of service, Detroit Edison will retrieve the data manually for a fee of \$12.00/ month (one reading). In the event that the telephone line service is out for three consecutive months, the Customer's Experimental Retail Access Service may be terminated and the Customer may be transferred to service under the Company's full requirement tariffs subject to the provisions of Section 5.1.

7.2 Billing: The Company will bill the Customer for Experimental Retail Access Service as outlined in Section 6.

7.3 Payment: The Customer shall pay the Company the amount billed on or before a due date which shall be 21 days following the date of mailing of the bill. A late payment charge of 2%, not compounded, of the unpaid balance, net of taxes, shall be added to any bill which is delinquent as defined by Commission Rules.

8. MARKETERS

8.1 Marketers desiring to supply Power to Customers directly or through Retailers under the terms of this Experimental Retail Access Service Tariff must comply with all franchise, statutory and regulatory requirements of state and federal law and must enter into agreements satisfactory to the Company for:

- (i) the payment of Transmission Charges and other charges,
- (ii) the provision and exchange of Customer information associated with service under this tariff,
- (iii) the supply, scheduling and receipt of Power to be received by the Company from the Marketer for delivery to the Customer,
- (iv) transmission service as Designated Agent of the Customer under the Company's Open Access Transmission Tariff, which agency shall only be effective so long as the Marketer is not in default of any obligation to the Company.

CANCELLED BY	ORDER <u>11-13808</u>

Effective for service rendered on
and after March 8, 1999 under
authority of order of the Michigan
Public Service Commission in Case
No. U-10840 dated March 8, 1999

**EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF
FOR CUSTOMER-PROCURED POWER – continued**

8.1.1 Real Power Losses (Distribution). A Marketer is responsible for replacing real power losses associated with the delivery of Power to the Distribution Point of Delivery. The amount of Power delivered by the Company on the Company's Distribution System to the Distribution Point of Delivery shall be adjusted using the following Real Power Loss Factors for distribution service:

Service Voltage	<u>1st Quarter</u>	<u>2nd Quarter</u>	<u>3rd Quarter</u>	<u>4th Quarter</u>
24/41.6 kV	1.86%	2.09%	2.34%	1.90%
120 kV and above	0.55%	0.57%	0.57%	0.55%

These loss factors apply for typical meter configurations where the metering point is at the low voltage side of the service transformer. If the metering point is at the high voltage side of the service transformer then an agreement between the Company and the Customer may be reached to reduce these loss factors.

Marketers must schedule and supply an amount of Power equal to the Customer's Load served x $[(1 + D\%) \times (1 + T\%)]$ to account for losses on the Company's Transmission and Distribution System, where T% is the applicable loss factor contained in the Company's Open Access Transmission Tariff and D% is the applicable loss factor from the table above.

9. LIABILITY AND EXCLUSIONS

9.1 In no event will the Company or its suppliers be liable under any cause of action relating to the subject matter of this tariff, whether based on contract, warranty, tort (including negligence), strict liability, indemnity or otherwise for any incidental or consequential damages including, but not limited to, loss of use, interest charges, inability to operate full capacity, lost profits or claims of Customer's customers.

9.2 The Company's total liability to the Customer for all claims arising out of or related to service provided under this tariff, whether based on contract, warranty, tort (including negligence), strict liability, indemnity or otherwise shall not exceed the amount paid by the Customer to the Company for the Location involved during the month in which the claim arose.

9.3 The Company will not be liable to a Customer for damages caused by interruption of service, voltage or frequency variations, single phase supply to three phase lines, reversal of phase rotation, or carrier-current frequencies imposed by the Company for system operations or equipment control except such as result from the failure of the Company to exercise reasonable care and skill in furnishing the service. The Customer should install protective equipment if such occurrences might damage its apparatus.

No. U-10840 dated March 8, 1999

(Changes made to revise Item 10.5 and add Item 10.6 as authorized by Order U-10840 dated August 4, 2000)

EXPERIMENTAL RETAIL ACCESS SERVICE TARIFF
FOR CUSTOMER-PROCURED POWER – continued

10. OTHER PROVISIONS

10.1 All Points of Receipt for Power produced within the Company's retail service territory for delivery to Customers within that territory shall be considered as points located on the Company's Transmission System.

10.2 Customers, Retailers, or Marketers desiring to operate electric generation equipment connected in parallel with the Company's system must comply with the Company's Protective Relaying, Operating and Telemetering Guidelines for Independently Owned Generation and before operating such equipment must obtain certification, in writing, from the Company that the conditions outlined in the Guidelines have been met.

10.3 Customer equipment must be operated so that voltage flicker and harmonics on the distribution system of the Company shall not exceed permissible limits established by the Company. Failure to comply with this requirement may result in discontinuance of service to the Customer and disconnection of Customer's Load from the Company's system.

10.4 The Company's Rules and Regulations as currently in effect are incorporated by reference into this tariff to the extent applicable and, Rule C-2.2(2) notwithstanding, only to the extent not inconsistent with the terms of this tariff.

10.5 Priorities of curtailment during controlled Emergency Electrical Procedures are as follows:

Retail customers with normal supply from a Marketer are not subject to curtailment as long as Detroit Edison continues to have the ability to deliver that energy.

Retail customers under backup supply from Detroit Edison are subject to curtailment after all interruptible customers and before any firm bundled service customer.

Return-to-service customers during the six-month notification period are subject to curtailment after all interruptible customers and before any firm bundled service customer.

Return-to-service customers after the six-month notification period are subject to curtailment within the normal bundled service priorities.

Under all conditions, hospitals will be treated the same as other bundled service hospitals, for purposes of implementing service curtailment programs, even if served as an incremental customer.

10.6 Customers may elect to obtain Standby Service from the Company, under the terms and conditions of the Company's Optional Open Access Backup Service Tariff.

RETAIL ACCESS SERVICE RIDER

1. INTRODUCTION

This **Rider** is designed to express the terms and conditions associated with retail access service in the Detroit Edison Electric Choice Program, as well as provide information regarding the roles of the various market participants. This **Rider** includes the following sections :

Introduction and Definitions	Sec. 1
Customers	Sec. 2 - 10
Alternative Electric Suppliers	Sec. 11 - 19
Load Profiling	Sec. 20

- In the Detroit Edison Electric Choice Program, Detroit Edison will maintain a relationship and interact with at least three separate participants: The Customer, the Alternative Electric Supplier and the Marketer. One entity may be responsible for both the Alternative Electric Supplier and Marketer roles. Detroit Edison has separately defined the retail and wholesale functions behind electric supply in a competitive environment.

1.1 Availability

Available for metered service in conjunction with Rate Schedule Nos. D1 through E5, inclusive, when the customer wishes to take power supply service from an Alternative Electric Supplier. This Rider is not available for unmetered service.

1.2 The Customer Role

The Customer is the end-user of Power at one or more locations in the State of Michigan who has facilities connected to the Detroit Edison distribution system. Under retail access service, the Customer will conduct transactions with at least two entities - Detroit Edison and an Alternative Electric Supplier. The Customer is responsible for choosing an Alternative Electric Supplier.

Detroit Edison's principal requirement is that the Customer must already be connected to the Detroit Edison Distribution System as a Full Service Customer or meet the requirements for new Customers connecting to the Detroit Edison Distribution System. All Primary Customers and Secondary Customers with Customer Service Capacities greater than 300 kW must execute Customer Distribution Agreements with Detroit Edison.

1.3 The Alternative Electric Supplier Role

An Alternative Electric Supplier is an entity that has obtained all the necessary legal approvals to sell retail electricity in Michigan.

The Alternative Electric Supplier buys products and services needed to provide power to Customers, combines these products and services in different marketing packages, and sells the packages to Customers. Alternative Electric Suppliers must meet all applicable statutory and regulatory requirements of Michigan and Federal law.

RETAIL ACCESS SERVICE TARIFF

1. Introduction

This tariff is designed to express the terms and conditions associated with retail access service in the Detroit Edison Electric Choice Program, as well as provide information regarding the roles of the various market participants. This tariff includes the following sections:

Introduction and Definitions	Sec. 1
Customers	Sec. 2 - 10
Alternative Electric Suppliers	Sec. 11 - 19
Marketers	Sec. 20 - 31
Bidding	Sec. 32 - 33

- In the Detroit Edison Electric Choice Program, Detroit Edison will maintain a relationship and interact with at least three separate participants: The Customer, the Alternative Electric Supplier and the Marketer. One entity may be responsible for both the Alternative Electric Supplier and Marketer roles. Detroit Edison has separately defined the retail and wholesale functions behind electric supply in a competitive environment.

1.1 The Customer Role

The Customer is the end-user of Power at one or more locations in the State of Michigan who has facilities connected to the Detroit Edison distribution system. Under retail access service, the Customer will conduct transactions with at least two entities - Detroit Edison and an Alternative Electric Supplier. The Customer is responsible for choosing an Alternative Electric Supplier.

Detroit Edison's principal requirement is that the Customer must already be connected to the Detroit Edison Distribution System as a Full Service Customer or meet the requirements for new Customers connecting to the Detroit Edison Distribution System. All Primary Customers and Secondary Customers with Customer Service Capacities greater than 300 kW must execute Customer Distribution Agreements with Detroit Edison.

1.2 The Alternative Electric Supplier Role

An Alternative Electric Supplier is an entity that has obtained all the necessary legal approvals to sell retail electricity in Michigan.

The Alternative Electric Supplier buys products and services needed to provide power to Customers, combines these products and services in different marketing packages, and sells the packages to Customers. RETAIL ACCESS SERVICE TARIFF

1. DEFINITIONS

"*Aggregator*" means an entity that combines the Power consumption of multiple Customers for the purpose of meeting minimum load criteria necessary for Retail Access Service.

"*Commission*" means the Michigan Public Service Commission.

"*Company*" means The Detroit Edison Company.

"*Company's Distribution System*" means facilities operated by the Company for the purpose of distributing electric power within the Company's electric service territory, which are subject to the jurisdiction of the Commission.

"*Company's Transmission System*" means facilities operated by the Company for the purpose of transmitting electric power within the Company's electric service territory which are subject to the jurisdiction of the Federal Energy Regulatory Commission.

"*Customer*" means, for purposes of Retail Access Service, an entity with electrical load facilities connected to the Company's Distribution System that purchases or receives Power from a Retailer and which Power is delivered to its Location(s) pursuant to this Tariff. All retail Customers, regardless of the voltage level of the service, are considered to be connected to the Company's Distribution System.

"*Distribution Contract Capacity*" means the load carrying capacity in kilowatts of the Company's Distribution System necessary to meet a Customer's maximum load requirements at a particular Location served under this tariff.

"*Distribution Point of Delivery*" means the point of interconnection between the Company's Distribution System and the Customer's service Location.

"*Distribution Point of Receipt*" means the point of interconnection between the Company's Transmission and Distribution Systems.

"*Load*" means electric demand measured in kilowatts (kW).

"*Location*" means each Customer facility whether owned or leased.

"*Marketer*" means an entity that:

- (i) generates, brokers, markets or otherwise procures power to be supplied to the Company at the Transmission Point of Receipt, obtains transmission services as the designated agent of the Customer, through the Customer's Retailer, and with whom a Customer or a Customer's Retailer has arranged for the receipt of Power,
- (ii) satisfies all applicable franchise, statutory, and regulatory requirements of Michigan and Federal law,
- (iii) satisfies all applicable reciprocity requirements set forth in this tariff.

Effective for service rendered on and after March 8, 1999 under authority of order of the Michigan Public Service Commission in Case No. U-11452 dated March 8, 1999

(Continued From Sheet No. EC2)

1. INTRODUCTION (Continued)

1.4 The Marketer Role

The Marketer is an entity that acts as a wholesale supplier; takes title to power and has FERC authorization to market energy services. FERC authorization allows the Marketer to use transmission systems to move power from the generator(s) to the distribution system. The Marketer is either a FERC-authorized power Marketer or a utility. As defined by FERC, in the context of this **Rider**, the Marketer is responsible for all Transmission-related responsibilities related to serving the retail access customers served by its supply. These include: scheduling energy, obtaining ancillary services, and paying energy imbalance charges. The Alternative Electric Supplier and Marketer functions may be handled by one entity or may be performed by different parties. Either way, both the Alternative Electric Supplier role and the Marketer role must be performed to complete delivery to a Customer.

1.5. Definitions

"Aggregator" means an entity that combines the energy consumption of multiple Customers for the purpose of meeting minimum load criteria necessary for retail access service.

"Alternative Electric Supplier" (AES) means an entity that has obtained all the necessary approvals to sell retail electricity in Michigan, and is licensed by the Michigan Public Service Commission. An AES does not physically deliver electricity directly to retail Customers in the state.

"Commission" means the Michigan Public Service Commission.

"Customer" means, for purposes of retail access service, an entity with electrical load facilities connected to the Detroit Edison Distribution System that purchases or receives Power from an Alternative Electric Supplier and which Power is delivered to its Location(s) pursuant to this **Rider**. All Customers, regardless of the voltage level of the service, are considered to be connected to the Detroit Edison Distribution System.

"Customer Service Capacity" means the load carrying capability of the Detroit Edison metering installation at the Customer's site, based on the thermal limits of the meter and any associated transformers.

"Demand" means the amount of power required to meet the Customer's load, generally expressed in kilowatts or megawatts, at a given instant or averaged over a designated interval of time.

"Demand Conversion Table" means a table that converts average kWh consumption to demand in kW, for a specific type or group of Customers. These tables will be used to determine the amount of limited phase-in capacity allocated to Customers without prior demand history as defined in Section 33.3.

"Detroit Edison's Distribution System" means facilities operated by Detroit Edison for the purpose of distributing electric power within Detroit Edison's electric service territory, which are subject to the jurisdiction of the Commission.

"Distribution Contract Capacity" means the load carrying capacity in kilowatts of the Detroit Edison Distribution System necessary to meet a Customer's maximum load requirements at a particular Location served under this **Rider**.

RETAIL ACCESS SERVICE TARIFF - continued

"Open Access Transmission Tariff (OATT)" means the Company's pro forma Open Access Transmission Tariff on file with the Federal Energy Regulatory Commission, as amended from time to time.

"Power" means a combination of the electric demand and energy requirements of the Customer.

"Retailer" means an entity that:

- (i) sells or procures power for a Customer and causes that power to be supplied to the Company for delivery to a Customer,
- (ii) satisfies all applicable franchise, statutory, and regulatory requirements of Michigan and Federal law,

"Set-Aside" means either of two special groupings of single-phase Customers designed to ensure that small Customers can participate in Retail Access Service.

"Transition Charge" is a surcharge intended to recover the costs associated with the implementation of Retail Access Service and the Company's stranded costs arising from implementation of Retail Access Service.

"Transmission Point of Delivery" means the point of interconnection between the Company's Transmission and Distribution Systems.

"Transmission Point of Receipt" means the point on the Company's Transmission System where Power is received by the Company for delivery to the Transmission Point of Delivery.

2. TERMS AND CONDITIONS OF SERVICE

2.1 This Retail Access Service Tariff sets forth the rates, charges, terms and conditions of service for the delivery of Power to a Customer, procured by a Retailer and supplied by a Marketer. Such Power shall be initially received at a designated Transmission Point of Receipt and ultimately delivered to the Customer through the Company's Distribution System.

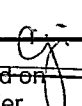

2.2 Power received by the Company from a Marketer shall be transmitted across the Company's Transmission System to the Company's Distribution System in accordance with the rates, terms and conditions of service of the Company's Open Access Transmission Tariff.

2.3 A Customer's eligibility to take Retail Access Service is subject to the full satisfaction of any terms or conditions imposed by preexisting contracts or tariffs with the Company including those which may preclude the Customer from taking Retail Access Service. Customers must have satisfied any past due amounts owed to the Company under any other arrangements or provisions for electric service before taking service under this Tariff. Rider No. 2 agreements between the Customer and the Company will remain in effect during service under this Tariff.

"Distribution Point of Delivery" means the point of interconnection between the Detroit Edison Distribution System and the Customer's service location.

"Distribution Point of Receipt" means the point of interconnection between the ITC Transmission and Detroit Edison Distribution Systems.

"Effective Date" is the date at which responsibility for servicing a Customer Load transfers from the current supplier to the new supplier. The transfer occurs at the beginning (00:01 hours) of the Effective Date.

"Energy" in the context of this document the word energy refers to "electrical energy" and is measured in kilowatt-hours.

"Energy Meter" means a meter capable of measuring and recording energy on a kWh basis.

"Full Service" means the provision of regulated electric service including energy, transmission and distribution services; each provided by Detroit Edison.

"International Transmission Company (ITC) Transmission System" means facilities operated by ITC for the purpose of transmitting electric power within the Detroit Edison electric service territory which are subject to the jurisdiction of the Federal Energy Regulatory Commission.

"Interval Demand Meter" means a meter capable of measuring and recording kW demands and kVAR demands on a 30-minute integrated basis, as needed to bill the Customer and measuring energy on a kWh basis.

"Joint Open Access Transmission Tariff (JOATT)" means the ITC and Consumers Energy Open Access Transmission Tariff on file with the Federal Energy Regulatory Commission, as amended from time to time. The Tariff applies to transactions where energy flows through both the ITC and Consumers Energy Transmission Systems.

"Load" means any end-use device drawing energy from the electric system.

"Location" means each Customer facility whether owned or leased.

"Marketer" means an entity that:

- (i) generates, brokers, markets or otherwise procures power to be supplied to ITC at the Transmission Point of Receipt, obtains transmission services and with whom a Customer's Alternative Electric Supplier has arranged for the receipt of Power,
- (ii) satisfies all applicable statutory and regulatory requirements of Michigan and Federal law, and
- (iii) satisfies all applicable reciprocity requirements set forth in this **Rider**.

- (i) generates, brokers, markets or otherwise procures power to be supplied to ITC at the Transmission Point of Receipt, obtains transmission services and with whom a Customer's Alternative Electric Supplier has arranged for the receipt of Power,
- (ii) satisfies all applicable statutory and regulatory requirements of Michigan and Federal law, and
- (iii) satisfies all applicable reciprocity requirements set forth in this tariff.

"Open Access Transmission Tariff (OATT)" means the ITC pro forma Open Access Transmission Tariff on file with the Federal Energy Regulatory Commission, as amended from time to time.

Public Service Commission in Case
No. U-12489 dated December 20, 2001

RETAIL ACCESS SERVICE TARIFF - continued

2.4 A Customer will specify only one Retailer and one Marketer at any given time for the supply of Power to each separately metered Load. Separately metered loads at a single Location that are at the same service voltage may be combined for the purposes of integrating the demands. If this is done, the combined load can only be served by a single Retailer and/or Marketer.

2.4.1 Customers shall be permitted to change Retailers at the completion of their normal billing cycle. Customers will be assessed a \$5 processing charge for each change.

2.4.2 Retailers shall be permitted to change a Marketer serving any of its Customers with 30 days notice to Detroit Edison.

2.5 If a Retailer or Marketer fails to pay amounts due the Company or otherwise fails to perform obligations undertaken in connection with service to a Customer, the Company will give the Customer notice of the Retailer's or Marketer's default. The Customer acknowledges that Retail Access Service may be terminated if the Customer, its Retailer, or its Marketer fails to pay amounts due the Company or otherwise fails to comply with the provisions of this Tariff or agreements with the Company. Unless the Customer, Retailer or Marketer cures the default with the Company or the Customer changes its Retailer or Marketer in accordance with Company rules, the Customer may be transferred to service under the Company's full requirements tariffs subject to the provisions of Section 5.2.

2.6 Customers receiving single-phase Retail Access Service must have their entire Load at a single Location served by one Retailer and one Marketer.

2.7 Retail Access Service is not available to Customers taking Lighting service utilizing Company-owned equipment.

2.8 The responsibilities of Aggregators, Retailers, Marketers or Customers may be undertaken or performed by one or more entities, provided the qualification requirements for each such function set forth in this tariff are met.

3. CHARACTER OF SERVICE

3.1 The Company furnishes alternating current service at a nominal frequency of 60 hertz 24 hours a day, subject to interruption by tariff, by agreement, by advance notice, by accident or by other causes not under the reasonable control of the Company.

3.2 For Single Phase Distribution Service, the Company provides service at differing voltages available in differing configurations within its service territory. These include, but are not limited to, single-phase secondary alternating current service at 120/240 volts. In some districts current is supplied from a Y- connected secondary network at 208Y/120 volts. Customers who are considering locating new load or who are considering adding load at an existing Location should contact the Company to determine what service is available at a particular Location to serve their Load.

(Continued From Sheet No. EC2b)

1. INTRODUCTION (Continued)

"Power" means a combination of the electric demand and energy requirements of the Customer.

"Reactive Demand" means the amount of reactive power required to meet the Customer's Load, generally expressed in kilovolt-amperes reactive (kVAR), at a given instant or averaged over a designated interval of time.

"Set-Aside" means either of two special groupings of single-phase Customers designed to ensure that small Customers can participate in retail access service.

"Sink" means a unique four-character code assigned to a Marketer's Transmission Service Agreement by ITC which identifies a load.

"Transition Charge" is a surcharge for the recovery of costs associated with the implementation of retail access service and Detroit Edison's stranded costs arising from implementation of retail access service.

"Transmission Point of Delivery" means the point of interconnection between the ITC Transmission and Detroit Edison Distribution Systems.

"Transmission Point of Receipt" means the point on the ITC Transmission System where Power is received by ITC for delivery to the Transmission Point of Delivery.

CUSTOMER SECTION

2. TERMS AND CONDITIONS OF SERVICE

- 2.1** This Retail Access Service **Rider** sets forth the rates, charges, terms and conditions of service for the delivery of Power to a Customer, procured by an Alternative Electric Supplier and supplied by a Marketer. Such Power shall be initially received at a designated Transmission Point of Receipt and ultimately delivered to the Customer through the Detroit Edison Distribution System.
- 2.2** Power received by ITC for delivery to the Customer shall be transmitted across the ITC Transmission System to the Detroit Edison Distribution System in accordance with the rates, terms and conditions of service of the ITC Open Access Transmission Tariff.
- 2.3** A Customer's eligibility to take retail access service is subject to the full satisfaction of any terms or conditions imposed by pre-existing contracts or tariffs with Detroit Edison. Customers must have satisfied any past due amounts owed to Detroit Edison under any other arrangements or provisions for electric service before taking service under this **Rider**, unless such past due amounts are due to billing disputes; Detroit Edison's failure to obtain meter readings, provide an actual bill or otherwise fail to properly demonstrate amounts owed by the Customer to Detroit Edison. Rider No. 2 agreements between the Customer and Detroit Edison will remain in effect during service under this **Rider**. Rider No. 4 - "Resale of Service" is also available under this **Rider**.

No. U-12489 dated December 20, 2001

RETAIL ACCESS SERVICE TARIFF - continued

3.3 For Three Phase Distribution Service, the Company provides service at differing voltages available in differing configurations within its service territory. These include, but are not limited to, alternating current, three-phase service at nominal 4,800, 13,200, 24,000, 41,570 or 120,000 volts which may be transformed to lower voltages through Company-owned transformation equipment. Where three-phase service is supplied at 480Y/277 volts through Company-owned transformation equipment, the Customer must furnish any transformation for the supply of its 120/240 volt requirements. Customers who are considering locating new load or who are considering adding load at an existing Location should contact the Company to determine what service is available at a particular Location to serve their Load.

4. AVAILABILITY OF SERVICE

4.1 Until December 31, 2001, eligibility for Retail Access Service will be determined using an open bidding procedure to be authorized by the Commission. Bids for eligibility may be submitted by prospective Customers, Retailers, Marketers or other parties and shall designate the amount of Load proposed to be served and the amount the Retailer serving such Load shall pay the Company as a Transition Charge for each kilowatt-hour associated with the awarded capacity delivered under this tariff.

4.2 On and after January 1, 2002, all Customers with Load connected to the Company's Distribution System shall be eligible for Retail Access Service and Retailers shall pay the Company a Transition Charge of 1.25¢/kWh for all kilowatt-hours consumed by Customers taking Retail Access Service. The Transition Charge is intended to recover the costs associated with the implementation of Retail Access Service and the Company's stranded costs arising from implementation of Retail Access Service. The Transition Charge of 1.25¢/kWh to be implemented on January 1, 2002, is an estimate of the charge to be imposed at that time and is subject to adjustment by the Commission.

4.3 Subject to final authorization by the Commission, the total maximum demand of load which may bid for Retail Access Service (Cumulative Load), the final day for submitting sealed bids to the Company, and the implementation dates for Retail Access Service is as follows:

<u>Final day for Submitting Bid</u>	<u>Cumulative Load</u>	<u>Implementation Date</u>
September 20, 1999	225,000 kW	as soon as practical after final day for bid submittal
November 19, 1999	450,000 kW	as soon as practical after final day for bid submittal
January 20, 2000	675,000 kW	as soon as practical after final day for bid submittal
March 20, 2000	900,000 kW	as soon as practical after final day for bid submittal
November 20, 2000	1,125,000 kW	January 1, 2001

On and after January 1, 2002, all Load connected to the Company's Distribution System shall be eligible for Retail Access Service.

and after March 8, 1999 under
authority of order of the Michigan
Public Service Commission in Case
No. U-11452 dated March 8, 1999

(Continued From Sheet No. EC2c)

2. TERMS AND CONDITIONS OF SERVICE (Continued)

- 2.4 A Customer will specify only one Alternative Electric Supplier (and the Alternative Electric Supplier shall specify only one Marketer) at any given time for the supply of Power to each Customer account or Customer Location.
- 2.5 Detroit Edison shall be required to complete all retail access enrollment activities required to place a Customer in "site-ready" status within the following timeframes:
- Within 10 calendar days when no meter work is required for the Customer to take retail access service
 - Within 45 days when meter work is required

These deadlines do not require that Customers actually commence service within the specified timeframes; only that Detroit Edison has completed all activities required of it to place the Customer in "site-ready" status.

Customers shall be permitted to change Alternative Electric Suppliers. The changes will become effective at the completion of their normal billing cycle. Customers will be assessed a \$5 processing charge per account for each change. The change will be submitted to Detroit Edison electronically by the Customer's new Alternative Electric Supplier as a new enrollment.

2.6 Multiple Meters at Non-Residential Locations

- 2.6.1 Existing groupings of multiple meters into accounts at a location will be maintained in setting up new retail access accounts. If possible, all the metered loads belonging to a single Customer at a location shall be grouped into a single account.
- 2.6.2 Multiple metered loads at a single voltage level may be combined, at the Customer's option, by physically re-wiring or by adding all metered quantities in the billing process.
- 2.6.3 The Customer is responsible for any re-wiring costs or, alternatively, the costs of all meters used for combining the Location. If re-wiring is required by Detroit Edison to facilitate metering, then Detroit Edison shall be responsible for the re-wiring costs.
- 2.6.4 When multiple Interval Demand Meters are used within a single voltage level, Maximum Demand at that voltage level will be established by the highest coincident demand recorded for those meters.

2.7 Multiple Meters at Residential Locations

All metered loads belonging to a single Residential Customer *may* be combined into a single metered load or account unless the Customer chooses to re-wire all loads through the principal meter at the residence. Detroit Edison will combine usage from all meters at the Customer's residence during the billing process. This does not apply to multi-family residential locations.

Public Service Commission in Case
No. U-12489 dated December 20, 2001

RETAIL ACCESS SERVICE TARIFF - continued

4.4 Bidding will be allowed up to the total maximum demand available through the current bid period, less any demand assigned to successful bidders in any prior bid periods that has not been forfeited. Bids must be for a minimum of 1,000 kW. In each bid period, 3,000 kW of the available capacity will be set aside for use by aggregated Residential Customers. A further 3,000 kW of each bid period's capacity will be set aside for use by aggregated single-phase Customers (including Residential). The remaining 219 MW may be used to serve any class of Customer. The Set-Asides will be accomplished by staging a sequential bidding process with the Residential Set-Aside first, then the Residential and single-phase Set-Aside, and finally, the remaining 219 MW. Losing bids in the Set-Asides will be carried over into the remaining bidding processes, providing, in effect, additional chances that the Set-Asides are filled in each bidding phase. Unused Set-Aside capacity, if any, may be filled by other bid classes, but a like amount will be added to future bid period Set-Asides to maintain the cumulative Set-Aside total at the original goal. Capacity will be offered in a simple auction process with capacity being awarded to the highest bidders. Capacity will be awarded to successively lower bids until the offered capacity is exhausted. In the event that two or more bids have identical prices, a lottery will be used to select the winning bidder.

4.5 Any individual or entity is allowed to bid, provided they meet the bidding requirements set forth herein and in the Company's filed Implementation Plan. Basic requirements include: a minimum quantity sought of 1,000 kW, a bid price per kWh to be paid as a transition charge, and a deposit. Deposit amounts are \$1.00/kW for the Residential Set-Aside, \$1.50/kW for the Residential/Single-Phase Set-Aside, and \$2.00/kW for the balance (Three- Phase) of each bid period's capacity. Successful bidders must satisfy all requirements established in this Tariff and in the filed Implementation Plan. The most basic requirement is that capacity owners will have 60 days to contract with a Retailer (or begin the process to qualify as a Retailer themselves) and 180 days from the time of award to enroll Customers. Any capacity not meeting these requirements will be forfeited and offered to the holder of the highest unsuccessful bid (if within 90 days of the original award) or re-bid in the next bid period (if default occurs more than 90 days after original award). Capacity owners may sell or assign their capacity rights. If they do so, they must inform Detroit Edison, so the sale and the new owner of record can be recorded. Any sale or assignment does not change the original requirement of 180 days to enroll Customers.

5. TERM AND COMMENCEMENT OF SERVICE

5.1 Retail Access Service shall have a minimum term as specified below:

5.1.1 Retail Access Service provided to new Locations shall be for an initial minimum term of five years over which time (a) the minimum charges shall apply, and (b) the Distribution Contract Capacity shall not be reduced.

5.1.2 Retail Access Service provided to existing Locations shall be for an initial minimum term of one year over which time the minimum charges shall apply.

5.1.3 Under special circumstances the initial term for Retail Access Service may be increased or reduced at the discretion of the Company.

2. TERMS AND CONDITIONS OF SERVICE (Continued)

2.8 Metering

- 2.8.1 All load served under this rider shall be metered. All three-phase customers shall be required to install interval Demand Meters. Single-phase customers shall be required to install energy meters.
- 2.8.2 Metering equipment for Customers taking retail access service shall be furnished, installed, read, maintained and owned by Detroit Edison.

2.9 Meter Reading

- 2.9.1 All Customers with Interval Demand Meters shall have meter reading accomplished electronically through Customer-provided telecommunication links or other electronic data methods able to provide Detroit Edison the metering data necessary to bill the customer and conform to required metering accuracy. The Alternative Electric Supplier shall have direct access to meter data through the same means as Detroit Edison, once the Customer is enrolled, without any further documentation or permission from the Customer.

The Company shall commence retail choice service upon installation of appropriate demand meters. Customers will have up to two months from service enrollment to complete the installation of telemetry. In the interim, the customer meters shall be read manually at no extra charge in return for a customer commitment to install telemetry within the two-month time period. Failure to meet this two-month time frame will result in the imposition of manual meter reading charges for the initial two months and subsequent months preceding installation and operation of telemetry.

- 2.9.2 If a Customer is not able to allow sharing of the telephone line, the Customer shall obtain a separate telephone line for such purposes as paying all charges in connection therewith. The Customer is responsible for assuring the performance of the telephone line. If the telephone line used for metering is out of service, Detroit Edison will retrieve the data manually for a fee of \$12/month (one reading). In the event that the telephone line service is out for three consecutive months, the Customer's retail access service may be terminated and the Customer may be transferred to service under Detroit Edison's full requirement tariffs subject to the provisions of Section 5.3.

EFFECTIVE FOR SERVICE RENDERED ON
AND AFTER NOVEMBER 24, 2004
UNDER AUTHORITY OF ORDER OF THE
MICHIGAN PUBLIC SERVICE COMMISSION
DATED NOVEMBER 23, 2004
IN CASE NO. U-13808

RETAIL ACCESS SERVICE TARIFF - continued

2.8 Metering

2.8.1 All load served under this tariff shall be metered. **All three-phase customers shall be required to install interval-demand meters. Single-phase customers shall be required to install energy meters. Demand Conversion Tables will be used to compute single-phase customers' demand for the purpose of determining the system use charge.**

2.8.2 Metering equipment for Customers taking retail access service shall be furnished, installed, read, maintained and owned by Detroit Edison.

2.9 Meter Reading

2.9.1 All Customers with Interval Demand Meters shall have meter reading accomplished electronically through Customer-provided telecommunication links or other electronic data methods able to provide Detroit Edison the metering data necessary to bill the customer and conform to required metering accuracy. The Alternative Electric Supplier shall have direct access to meter data through the same means as Detroit Edison, once the Customer is enrolled, without any further documentation or permission from the Customer.

The Company shall commence retail choice service upon installation of appropriate demand meters. Customers will have up to two months from service enrollment to complete the installation of telemetry. In the interim, the customer meters shall be read manually at no extra charge in return for a customer commitment to install telemetry within the two-month time period. Failure to meet this two-month time frame will result in the imposition of manual meter reading charges for the initial two months and subsequent months preceding installation and operation of telemetry.

2.9.2 If a Customer is not able to allow sharing of the telephone line, the Customer shall obtain a separate telephone line for such purposes as paying all charges in connection therewith. The Customer is responsible for assuring the performance of the telephone line. If the telephone line used for metering is out of service, Detroit Edison will retrieve the data manually for a fee of \$12/month (one reading). In the event that the telephone line service is out for three consecutive months, the Customer's retail access service may be terminated and the Customer may be transferred to service under Detroit Edison's full requirement tariffs subject to the provisions of Section 5.4.

Effective for service rendered on and after April 27, 2002 under authority of order of the Michigan Public Service Commission in Case No. U-12489 dated April 26, 2002.

RETAIL ACCESS SERVICE TARIFF - continued

2.8 Metering

2.8.1 All Load served under this tariff shall be metered. All Customers receiving electric service at 4,800 volts or greater shall be required to install Interval Demand Meters.

2.8.2 Customers receiving electric service at 480 volts or less, through Detroit Edison-owned transformation and a Customer Service Capacity of less than 300 kW will have metering requirements as follows:

Service	Required Metering
Regular	Interval Demand Meter
Optional Service	Energy Meter

2.8.3 Metering equipment for Customers taking retail access service shall be furnished, installed, read, maintained and owned by Detroit Edison.

2.9 Meter Reading

2.9.1 For Customers with Interval Demand Meters, meter reading may be accomplished electronically through Customer-provided telecommunication links or other electronic data methods able to provide Detroit Edison the metering data necessary to bill the customer and conform to required metering accuracy. In the event Detroit Edison maintains the customer on the same meter read cycles, it will be the Customer's option of installing data links for remote meter reading or allowing Detroit Edison to read by conventional means. The Alternative Electric Supplier shall have direct access to meter data through the same means as Detroit Edison, once the Customer is enrolled, without any further documentation or permission from the Customer.

2.9.2 If a Customer is not able to allow sharing of the telephone line, the Customer shall obtain a separate telephone line for such purposes as paying all charges in connection therewith. The Customer is responsible for assuring the performance of the telephone line. If the telephone line used for metering is out of service, Detroit Edison will retrieve the data manually for a fee of \$12/ month (one reading). In the event that the telephone line service is out for three consecutive months, the Customer's retail access service may be terminated and the Customer may be transferred to service under Detroit Edison's full requirement tariffs subject to the provisions of Section 5.4.

Effective for service rendered on
and after December 20, 2001 under
authority of order of the Michigan
Public Service Commission in Case
No. U-12489 dated December 20, 2001

RETAIL ACCESS SERVICE TARIFF - continued

5.1.4 Upon completion of the initial term, Retail Access Service shall continue on a month to month basis until terminated by the Customer or the Company with 30 days notice.

5.2 Customers may discontinue Retail Access Service and return to the Company's full requirements service upon mutual agreement between the Customer and the Company. The Customer may initiate this return to full requirements service by contacting the Company directly or through its Retailer. The Company has no obligation to verify that the Customer is eligible to terminate the service under the terms of a contract with its Retailer. Such full requirements service shall be for a period of at least one year.

5.3 Retail Access Service may not commence until metering has been installed as specified in this Tariff or agreements related thereto and the Company has received from the parties involved:

- Marketer:
- (i) an executed Transmission Service Agreement,
 - (ii) agreements between the Marketer and the company as specified in Section 8 of this Tariff,
- Retailer:
- (i) the Retailer's warranty that the Retailer has obtained all necessary approvals authorizing the Retailer to conduct business at each Location to be served, and
 - (ii) the Retailer's warranty that each enrollment submitted is in full compliance with all Company requirements for enrollment, backed by a contract between the Retailer and the Customer that authorizes Detroit Edison to switch the Customer to Retail Access Service.

6. RATES AND CHARGES

Description of Charges

6.1 Service Charge: The Service Charge shall apply to each Location served under this tariff.

6.2 System Use Charge: The System Use Charge shall be the product of the applicable rate and the Customer's maximum demand, at each voltage level, for each Location. The maximum demand shall be the highest 30-minute integrated kW demand created during the previous 12 billing months at each voltage level (whether the Customer received service under this tariff or a Detroit Edison retail tariff or contract), including the current month but not less than 50% of Distribution Contract Capacity.

Public Service Commission in Case
No. U-11452 dated March 8, 1999

(Continued From Sheet No. EC2e)

2. TERMS AND CONDITIONS OF SERVICE (Continued)

2.9.3 *Energy and non-Interval Demand Meters* will be read by conventional means and the Customer will not be required to provide a telephone service.

2.9.4 The switch of a Customer's account from one supplier to another will normally take place on the scheduled meter reading date for that Customer (the Effective Date) and be based on the reading made that same day. If an actual meter reading is not made on the Effective Date, Detroit Edison will read the meter within five (5) business days of the date in which Detroit Edison determines that the scheduled actual meter reading has not occurred. The meter reading on the Effective Date will be determined on a pro rated basis based on the actual meter reading. Detroit Edison's failure to read meters in the time frames noted, through no fault of the Customer, shall not result in penalties of any type to the Customer. Except for actions outside the scope of Detroit Edison's control and storms or other events or occurrences that render the reading of meters physically impossible, customer's bills for Detroit Edison distribution services will be reduced by 1/30 for each day Detroit Edison meter reads are late past a three day grace period.

2.10 Meter Errors and Telephone Failures

Billing where metering errors and malfunctions have taken place shall be performed as follows:

2.10.1 *For Energy and non-Interval Demand Metered* Customers where metered data is not available due to metering errors, malfunctions, or otherwise, the usage will be estimated using the procedure described in the billing rule B-4.2 (2) Estimated Billing.

2.10.2 For Interval Demand Metered Customers where metered data is not available due to metering errors, malfunctions, or otherwise, the usage will be estimated using the available historical data for the Customer.

2.10.3 Where incorrect billing results from calculation error discovered by either Detroit Edison, the Alternative Electric Supplier or the Customer, the error will be corrected and revised bills for the Customer and the Alternative Electric Supplier will be calculated and settled on the next billing period after the error is discovered. Billing errors discovered by Detroit Edison shall be adjusted as provided for in the Residential, Commercial, and Industrial Billing Rules.

2.10.4 Liability for meter or calculation errors or malfunctions shall be assigned or apportioned to the appropriate party based on fault.

3. CHARACTER OF SERVICE

3.1 Detroit Edison furnishes alternating current service at a nominal frequency of 60 hertz 24 hours a day, subject to interruption by tariff, by agreement, by advance notice, by accident or by other causes not under the reasonable control of Detroit Edison.

Public Service Commission in Case
No. U-12489 dated December 20, 2001

RETAIL ACCESS SERVICE TARIFF - continued

6.3 Distribution Contract Capacity: Customers shall contract for an amount of capacity sufficient to meet the maximum requirements of the Load connected to the Company's Distribution System at the Customer's Location. Customers not having previously established service requirements shall contract with the Company for a specified Distribution Contract Capacity in kilowatts sufficient to meet maximum requirements for each Location. Customers having previously established maximum demands prior to transferring from retail, full requirements service to Retail Access Service shall have their Distribution Contract Capacity set at their highest 30-minute integrated demand created during the previous 12 billing months for each Location at each voltage level. The Company will provide the necessary facilities to deliver electric power from its distribution system at the Distribution Contract Capacity. Subject to the provisions of the Company's Rules, any incremental cost incurred by the Company to provide the necessary facilities to meet the Customer's increased demand for distribution services over the Distribution Contract Capacity existing when service commences under this tariff shall be the responsibility of the Customer. Once established, the Distribution Contract Capacity shall not decrease during the contract term unless there is a specific permanent reduction in connected load. Any single 30-minute integrated reading of the demand meter in any month that exceeds the Distribution Contract Capacity then in effect shall become the new Distribution Contract Capacity.

6.4 Redundant Service: Redundant services requested by the Customer may be provided under separate agreement.

6.5 Substation Charge: A substation charge shall apply to Customers with service at a service voltage level of 24kV or above who are provided service through a substation owned by the Company and dedicated to the Customer's use. The Substation Charge shall be the product of the applicable rate and the Customer's maximum demand.

6.6 Transition Charge: THIS CHARGE WAS INSTITUTED BY MPSC ORDER NO. U-12478 AND WILL REMAIN IN EFFECT UNTIL 12/31/01 AT WHICH TIME THE TRANSITION CHARGE WILL BE EQUAL TO THE THEN APPLICABLE SECURITIZATION BOND (SB) AND SECURITIZATION BOND TAX (SBT) CHARGES OR WILL BE SET BY THE COMMISSION IN ITS ORDER ISSUED IN CASE U-12639 (EXPECTED EFFECTIVE DATE OF 1/1/02) FROM WHICH A TRANSITION CHARGE CAN BE DERIVED THAT RECOGNIZES THE EFFECT OF SECURITIZATION ON DETROIT EDISON'S TOTAL STRANDED COSTS. TO DETERMINE THE TRANSITION CHARGE, THE CUSTOMER'S COST TO ACHIEVE PARTICIPATION IN THE PHASE-IN OF ELECTRIC CHOICE (THE BID TRANSITION CHARGE) WILL BE SPLIT INTO TWO COMPONENTS, ONE EQUAL TO THE SB CHARGE AND THE SBT CHARGE AND THE SECOND, KNOWN AS THE TRANSITION CHARGE, EQUAL TO THE DIFFERENCE BETWEEN THE BID TRANSITION CHARGE AND THE SB AND SBT CHARGES.

EQUALIZATION ADJUSTMENT: THROUGH 12/31/01 THE TRANSITION CHARGE WILL BE REDUCED BY AN EQUALIZATION ADJUSTMENT. THE EQUALIZATION ADJUSTMENT FOR PARTICIPANTS IN ELECTRIC CHOICE ARE AS FOLLOWS:

RESIDENTIAL
COMMERCIAL & INDUSTRIAL SECONDARY
COMERCIAL & INDUSTRIAL PRIMARY
THESE ADJUSTMENTS EXPIRE ON 12/31/01

0.46¢/KWH

0.48¢/KWH

0.28¢/KWH

(Continued From Sheet No. EC2f)

3. CHARACTER OF SERVICE (Continued)

3.2 For Single-Phase Distribution Service, Detroit Edison provides service at differing voltages available in differing configurations within its service territory. These include, but are not limited to, single-phase secondary alternating current service at 120/240 volts. In some districts current is supplied from a Y-connected secondary network at 208Y/120 volts. Customers who are considering locating new load or who are considering adding load at an existing Location should contact Detroit Edison to determine what service is available at a particular Location to serve their Load.

3.3 For Three-Phase Distribution Service, Detroit Edison provides service at differing voltages available in differing configurations within its service territory. These include, but are not limited to, alternating current, three-phase service at nominal 4,800, 13,200, 24,000, 41,570 or 120,000 volts which may be transformed to lower voltages through Detroit Edison-owned transformation equipment. Where three-phase service is supplied at 480Y/277 volts through Detroit Edison-owned transformation equipment, the Customer must furnish any transformation for the supply of its 120/240 volt requirements. Customers who are considering locating new load or who are considering adding load at an existing Location should contact Detroit Edison to determine what service is available at a particular Location to serve their Load.

4. AVAILABILITY OF SERVICE

4.1 A customer site with load connected to Detroit Edison's Distribution System through a metered delivery point capable of delivering the required power that meets the eligibility requirements set forth in Section 2.3 shall be eligible for Retail Access Service.

5. TERM, COMMENCEMENT OF SERVICE AND RETURN TO FULL SERVICE

5.1 Term

5.1.1 Retail access service shall have a minimum term of two years subject to the provisions of Section 5.3. Upon completion of the initial term, retail access service shall continue on a month to month basis until terminated by the Customer or Detroit Edison with 30 days written notice. Any customer who elected retail access service prior to the Commission's final order in U-13808 will be subject to a minimum term of one year.

When more than 10% of the customer load in kWh for any of the three rate classes – residential, commercial, and industrial – is taking open access service, customers in that class must provide 60 days written notice.

If an Alternative Electric Supplier defaults, a Customer who returns to full service before the 30 or 60 days elapse shall pay the higher of the tariff rate or market based rate until Detroit Edison has received the benefit of 30 or 60 days notice, at which time the customer may elect to remain on full service for 12 months and pay tariff rates as provided for in Section 5.3. All other customers who fail to give less than 30 or 60 days notice are subject to Detroit Edison's ability to supply their requirements.

5.1.2 The terms of service associated with any previously contracted or newly initiated service are specified below:

Retail access service provided to new locations served by Detroit Edison shall be for an initial minimum term of five years over which time the minimum charges shall apply. Contributions in Aid of Construction for distribution facilities will be per tariff rate.

RETAIL ACCESS SERVICE TARIFF - continued

3.2 For Single-Phase Distribution Service, Detroit Edison provides service at differing voltages available in differing configurations within its service territory. These include, but are not limited to, single-phase secondary alternating current service at 120/240 volts. In some districts current is supplied from a Y-connected secondary network at 208Y/120 volts. Customers who are considering locating new load or who are considering adding load at an existing Location should contact Detroit Edison to determine what service is available at a particular Location to serve their Load.

3.3 For Three-Phase Distribution Service, Detroit Edison provides service at differing voltages available in differing configurations within its service territory. These include, but are not limited to, alternating current, three-phase service at nominal 4,800, 13,200, 24,000, 41,570 or 120,000 volts which may be transformed to lower voltages through Detroit Edison-owned transformation equipment. Where three-phase service is supplied at 480Y/277 volts through Detroit Edison-owned transformation equipment, the Customer must furnish any transformation for the supply of its 120/240 volt requirements. Customers who are considering locating new load or who are considering adding load at an existing Location should contact Detroit Edison to determine what service is available at a particular Location to serve their Load.

4. Availability of Service

4.1 Until December 31, 2001, eligibility for retail access service will be determined using the open bidding procedure described in the bidding section of this tariff, as authorized by the Commission in their March 8, 1999 order in case number U-11290. The amount bid becomes the amount of the Transition Charge to be paid by the Customer for all kWh consumed through December 31, 2001 by Customers taking retail access service. Retail access service will continue for these Customers through the transition to full retail access on January 1, 2002. However, Transition Charges will change as described in Section 8.4.

5. Term, Commencement of Service and Return to Full Service

5.1 Retail access service shall have a minimum term of one year subject to the provisions of 5.4. Upon completion of the initial term, retail access service shall continue on a month to month basis until terminated by the Customer or Detroit Edison with 30 days written notice.

When more than 10% of the customer load in kWh for any of the three rate classes—residential, commercial, and industrial—is taking open access service, customers in that class must provide 60 days written notice.

If an Alternative Electric Supplier defaults, a Customer who returns to full service before 30 days elapse shall pay the higher of the tariff rate or market based rate until Detroit Edison has received the benefit of 30 or 60 days notice, at which time the customer may elect to remain on full service for 12 months and pay tariff rates as provided for in 5.4. All other customers who fail to give less than 30 or 60 days notice are subject to Detroit Edison's ability to supply their requirements.

Public Service Commission in Case
No. U-11452 dated March 8, 1999

(Continued From Sheet No. EC2g)

5. TERM, COMMENCEMENT OF SERVICE AND RETURN TO FULL SERVICE (Continued)

Service provided to existing locations shall be for the unexpired portion of any existing contract but not less than a term of one year over which time the minimum charges shall apply.

After the expiration of the contract minimum term for Retail Access Service, the contract shall be extended thereafter, from month-to-month.

Minimum charges shall be adjusted each year to recognize actual demand.

5.2 Commencement of Service

5.2.1 Retail access service shall be initiated by a Customer choosing an Alternative Electric Supplier and the subsequent submission of an electronic enrollment by the Alternative Electric Supplier on behalf of the Customer in a manner specified by Detroit Edison. Alternative Electric Supplier submission of the enrollment warrants that a valid contract with the prospective Customer exists. Detroit Edison shall be required to complete all open access enrollment activities required of it to get the enrollment to "site-ready" status within the timeframes specified in Section 2.5.

5.2.2 Retail access service may not commence until metering has been installed as specified in this **Rider** or agreements related thereto and:

MISO has received from the Marketer an executed Transmission Service Agreement.

In addition, Detroit Edison must have received from the Alternative Electric Supplier:

- (i) the Alternative Electric Supplier's warranty, that the Alternative Electric Supplier has obtained all necessary approvals authorizing the Alternative Electric Supplier to conduct business at each Location to be served, and
- (ii) the Alternative Electric Supplier's warranty, that each enrollment submitted is in full compliance with requirements for enrollment, and is backed by proper authorization from the Customer allowing the Alternative Electric Supplier to enroll the Customer in retail access.

5.3 Return to Full Service

5.3.1 In addition to the written notice provided in 5.1, a Customer shall provide Detroit Edison with notice no later than December 1st if the Customer will be taking full service from Detroit Edison during the following summer. For this purpose, "summer" means Detroit Edison regularly scheduled billing periods beginning June 1st through September 30th. Customers who so notify Detroit Edison shall be obligated to take full service from Detroit Edison for twelve months and pay for such service at any tariff rate for which the customer qualifies.

If a Customer does not provide Detroit Edison with written notice prior to December 1st and then takes full service from Detroit Edison during the following summer, the Customer shall pay Detroit Edison the higher of (a) the applicable tariff energy prices plus 10% or (b) the Market Priced Power charges plus 10% until such time as the minimum two year commitment to retail open access service has been met and the December 1st written notice requirement has been met.

DATED DECEMBER 22, 2005
IN CASE NO. U-14399

(Continued From Sheet No. EC2g)

5. TERM, COMMENCEMENT OF SERVICE AND RETURN TO FULL SERVICE
(Continued)

Service provided to existing locations shall be for the unexpired portion of any existing contract but not less than a term of one year over which time the minimum charges shall apply.

After the expiration of the contract minimum term for Retail Access Service, the contract shall be extended thereafter, from month-to-month.

Minimum charges shall be adjusted each year to recognize actual demand.

5.2 Commencement of Service

5.2.1 Retail access service shall be initiated by a Customer choosing an Alternative Electric Supplier and the subsequent submission of an electronic enrollment by the Alternative Electric Supplier on behalf of the Customer in a manner specified by Detroit Edison. Alternative Electric Supplier submission of the enrollment warrants that a valid contract with the prospective Customer exists. Detroit Edison shall be required to complete all open access enrollment activities required of it to get the enrollment to "site-ready" status within the timeframes specified in Section 2.5.

5.2.2 Retail access service may not commence until metering has been installed as specified in this Tariff or agreements related thereto and:

MISO has received from the Marketer an executed Transmission Service Agreement.

In addition, Detroit Edison must have received from the Alternative Electric Supplier:

(i) the Alternative Electric Supplier's warranty, that the Alternative Electric Supplier has obtained all necessary approvals authorizing the Alternative Electric Supplier to conduct business at each Location to be served, and

(ii) the Alternative Electric Supplier's warranty, that each enrollment submitted is in full compliance with requirements for enrollment, and is backed by proper authorization from the Customer allowing the Alternative Electric Supplier to enroll the Customer in retail access.

5.3 Return to Full Service

5.3.1 In addition to the written notice provided in 5.1, a Customer shall provide Detroit Edison with notice no later than December 1st if the Customer will be taking full service from Detroit Edison during the following summer. For this purpose, "summer" means Detroit Edison regularly scheduled billing periods beginning June 1st through September 30th. Customers who so notify Detroit Edison shall be obligated to take full service from Detroit Edison for twelve months and pay for such service at any tariff rate for which the customer qualifies.

If a Customer does not provide Detroit Edison with written notice prior to December 1st and then takes full service from Detroit Edison during the following summer, the Customer shall pay Detroit Edison the higher of (a) the applicable tariff energy prices plus 10% or (b) the Market Priced Power charges plus 10% until such time as the minimum two year commitment retail open access service has been met and the December 1st written notice requirement is been met.

RETAIL ACCESS SERVICE TARIFF - continued

The terms of service associated with any previously contracted or newly initiated service are specified below:

5.1.1 Retail Access Service provided to new locations served by Detroit Edison shall be for an initial minimum term of five years over which time the minimum charges shall apply. Contributions in Aid of Construction for distribution facilities will be per tariff rate.

5.1.2 Retail Access Service provided to existing locations shall be for the unexpired portion of any existing contract but not less than a term of one year over which time the minimum charges shall apply. Minimum charges shall be adjusted each year to recognize actual demand.

5.1.3 After the expiration of the contract minimum term for Retail Access Service, the contract shall be extended thereafter, from month-to-month. Minimum charges shall be adjusted each year to recognize actual demand.

5.2 Retail access service shall be initiated by a Customer choosing an Alternative Electric Supplier and the subsequent submission of an electronic enrollment by the Alternative Electric Supplier on behalf of the Customer in a manner specified by Detroit Edison. Alternative Electric Supplier submission of the enrollment warrants that a valid contract with the prospective Customer exists. In accordance with Section 2.5, Detroit Edison shall be required to complete, within 45 days, all open access enrollment activities.

5.3 Retail access service may not commence until metering has been installed as specified in this Tariff or agreements related thereto and:

ITC has received from the Marketer an executed Transmission Service Agreement.

In addition, Detroit Edison must have received from the Alternative Electric Supplier:

(i) the Alternative Electric Supplier's warranty, that the Alternative Electric Supplier has obtained all necessary approvals authorizing the Alternative Electric Supplier to conduct business at each Location to be served, and

(ii) the Alternative Electric Supplier's warranty, that each enrollment submitted is in full compliance with requirements for enrollment, and is backed by proper authorization from the Customer allowing the Alternative Electric Supplier to enroll the Customer in retail access.

RETAIL ACCESS SERVICE TARIFF - continued

6.10 Power Factor Charge: The Power Factor Charge is expressed in \$/kW and is applied to the single highest 30-minute integrated kW demand during the on-peak billing period. Power Factor shall be determined at the time of the single highest 30-minute integrated kVAR demand during the on-peak hours of the billing period and is a function of that kVAR demand and the corresponding 30-minute integrated kW demand for the same period. The Company maintains distribution system design standards based upon normal operating efficiency levels. Excessive deviations from Power Factor design limits shall be subject to the Power Factor Charge, require the Customer to take corrective action, or both. Customers with Power Factors below 70% must take action to correct Power Factor. Customers served at the 120kV level and above impact the transmission provider's system and compensation for Power Factors shall be made directly to the transmission provider by the Customer under the provisions contained in the Open Access Transmission Tariff.

Power Factor Charges (\$/kW):

Power Factor Range	120 kV and up	24 or 41.6 kV	4.8 or 13.2 kV
0.850 or higher	Per Transmission Tariff	\$0.00	\$0.00
0.800 to to 0.849	Per Transmission Tariff	\$0.29	\$0.31
0.750 to 0.799	Per Transmission Tariff	\$0.59	\$0.62
0.700 to 0.749	Per Transmission Tariff	\$0.88	\$0.93

(Continued From Sheet No. EC2h)

5. TERM, COMMENCEMENT OF SERVICE AND RETURN TO FULL SERVICE (Continued)

5.3.2 Subject to the notice provisions of Section 5.3.1, Customers that discontinue retail access service may return to Detroit Edison Full Service under the following conditions:

5.3.2.1 Option 1 -- 12 Month Service Commitment

If the Customer commits to Detroit Edison Full Service for a minimum of 12 months, then the Customer may take service under any tariff rate for which the Customer qualifies. Any returning Customer that commits to remain on full service for the subsequent 12 months and then fails to do so will be back billed for the higher of the tariff rate or market-based rate.

5.3.2.2 Option 2 -- Short-Term Service

If the Customer chooses not to commit to Detroit Edison Full Service for a minimum of 12 months, then the Customer may take service under any tariff rate for which the Customer qualifies, with the tariff rate modified as follows:

The Power Supply Cost Recovery component, both base and adjustment factor, in any and all energy prices of the tariff, shall be subtracted from the energy prices and the Market Priced Power charge shall be added to the energy prices. The Market Priced Power charge shall reflect the current market value of energy, shall be based on visible indexes of electricity market prices plus reasonable charges for transmission and losses, and shall be calculated according to methods approved by the Michigan Public Service Commission. The Customer shall be billed the higher of the applicable tariff energy prices or the Market Priced Power charge.

The Customer may at any time return to retail access service or agree to take Detroit Edison Full Service for a minimum of 12 months.

5.3.2.3 Unless otherwise provided for and subject to other conditions in this **Rider**, a Customer may return to Detroit Edison Full Service under the provisions of Section 5.3 and subsequently go back to retail access service no more than once in any month.

6. Billing and Payment

6.1 Detroit Edison will bill the Customer for retail access service at the rates and charges outlined in Section 8.

6.2 The Customer shall pay Detroit Edison the amount billed on or before a due date established by Billing Rules approved by the Commission in cases U-10661 and U-11397. A late payment charge of 2%, not compounded, of the unpaid balance, net of taxes, shall be added to any bill which is delinquent and not in dispute.

**5. TERM, COMMENCEMENT OF SERVICE AND RETURN TO FULL SERVICE
(Continued)**

5.3.2 Subject to the notice provisions of Section 5.3.1, Customers that discontinue retail access service may return to Detroit Edison Full Service under the following conditions:

5.3.2.1 Option 1 -- 12 Month Service Commitment

If the Customer commits to Detroit Edison Full Service for a minimum of 12 months, then the Customer may take service under any tariff rate for which the Customer qualifies. Any returning Customer that commits to remain on full service for the subsequent 12 months and then fails to do so will be back billed for the higher of the tariff rate or market-based rate.

5.3.2.2 Option 2 -- Short-Term Service

If the Customer chooses not to commit to Detroit Edison Full Service for a minimum of 12 months, then the Customer may take service under any tariff rate for which the Customer qualifies, with the tariff rate modified as follows:

The Power Supply Cost Recovery component, both base and adjustment factor, in any and all energy prices of the tariff, shall be subtracted from the energy prices and the Market Priced Power charge shall be added to the energy prices. The Market Priced Power charge shall reflect the current market value of energy, shall be based on visible indexes of electricity market prices plus reasonable charges for transmission and losses, and shall be calculated according to methods approved by the Michigan Public Service Commission. The Customer shall be billed the higher of the applicable tariff energy prices or the Market Priced Power charge.

The Customer may at any time return to retail access service or agree to take Detroit Edison Full Service for a minimum of 12 months.

5.3.2.3 Unless otherwise provided for and subject to other conditions in this tariff, a Customer may return to Detroit Edison Full Service under the provisions of Section 5.3 and subsequently go back to retail access service no more than once in any month.

6. Billing and Payment

6.1 Detroit Edison will bill the Customer for retail access service at the rates and charges outlined in Section 8.

6.2 The Customer shall pay Detroit Edison the amount billed on or before a due date established by Billing Rules approved by the Commission in cases U-10661 and U-11397. A late payment charge of 2%, not compounded, of the unpaid balance, net of taxes, shall be added to any bill which is delinquent and not in dispute.

5.4 Return to Full Service

Customers that discontinue retail access service may return to Detroit Edison Full Service under the following conditions:

5.4.1 Option 1 -- 12 Month Service Commitment

If the Customer commits to Detroit Edison Full Service for a minimum of 12 months, then the Customer may take service under any tariff rate for which the Customer qualifies. Any returning Customer that commits to remain on full service for the subsequent 12 months and then fails to do so will be back billed for the higher of the tariff rate or market-based rate.

5.4.2 Option 2 -- Short-Term Service

If the Customer chooses not to commit to Detroit Edison Full Service for a minimum of 12 months, then the Customer may take service under any tariff rate for which the Customer qualifies, with the tariff rate modified as follows:

The Power Supply Cost Recovery component, both base and adjustment factor, in any and all energy prices of the tariff, shall be subtracted from the energy prices and the Market Priced Power charge shall be added to the energy prices. The Market Priced Power charge shall reflect the current market value of energy, shall be based on visible indexes of electricity market prices plus reasonable charges for transmission and losses, and shall be calculated according to methods approved by the Michigan Public Service Commission. The Customer shall be billed the higher of the applicable tariff energy prices or the Market Priced Power charge.

The Customer may at any time return to retail access service or agree to take Detroit Edison Full Service for a minimum of 12 months.

5.4.3 Unless otherwise provided for and subject to other conditions in this tariff, a Customer may return to Detroit Edison Full Service under the provisions of Section 5.4 and subsequently go back to retail access service no more than once in any month.

6. Billing and Payment

6.1 Detroit Edison will bill the Customer for retail access service at the rates and charges outlined in Section 8.

6.2 The Customer shall pay Detroit Edison the amount billed on or before a due date established by Billing Rules approved by the Commission in cases U-10661 and U-11397. RETAIL ACCESS SERVICE TARIFF - continued

7. METERING, BILLING AND PAYMENT

7.1 Metering: Load served under this tariff shall be separately metered by meters capable of measuring and recording kW demands (and kVAR demands, if applicable) on a 30-minute integrated basis and measuring energy on a kWh basis. Metering equipment for Customers taking Retail Access Service shall be furnished, installed, read, maintained and owned by the Company. For Three Phase and those Single Phase Customers not electing the meter waiver provision described below, the Company requires access to the Customer's telephone line for purposes of meter interrogation. If a Customer is not able to allow sharing of the telephone line, the Customer shall obtain a separate telephone line for such purposes paying all charges in connection therewith. The Customer is responsible for assuring the performance of the telephone line. If the telephone line used for metering is out of service, Detroit Edison will retrieve the data manually for a fee of \$12.00/ month (one reading). In the event that the telephone line service is out for three consecutive months, the Customer's Retail Access Service may be terminated and the Customer may be transferred to service under the Company's full requirement tariffs subject to the provisions of Section 5.2.

7.2 Meter Waiver: The Company reserves the right to require Single-Phase Customers to comply with the above metering requirements, but, until further notice, the Company will waive the metering requirements set forth above for Single-Phase Customers and will statistically derive hourly load profiles which will be used for the purpose of developing charges under the Company's Open Access Transmission Tariff.

7.3 Billing: The Company will bill the Customer for Retail Access Service as outlined in Section 6. The Retailer may exercise the option of billing its Customers for service that it provides, although the Company will offer billing services to participating Retailers as outlined in separate agreements.

7.4 Payment: The Customer shall pay the Company the amount billed on or before a due date which shall be 21 days following the date of mailing of the bill. A late payment charge of 2%, not compounded, of the unpaid balance, net of taxes, shall be added to any bill which is delinquent as defined by the Commission Rules.

8. RETAILERS AND MARKETERS

8.1 Retailers desiring to sell or provide Power to Customers under the terms of this Retail Access Service Tariff must have all necessary approvals to conduct business in each community in which Power is to be delivered, must comply with all statutory and regulatory requirements, state and federal law, and must enter into agreements satisfactory to the Company for:

- (i) the payment of Transition Charges and other charges,
- (ii) the provision and exchange of Customer information associated with service under this Tariff.

Effective for service rendered on and after March 8, 1999 under authority of order of the Michigan Public Service Commission in Case No. U-11452 dated March 8, 1999

(Continued From Sheet No. EC2i)

6. BILLING AND PAYMENT (Continued)

6.3 The Customer shall retain the right to direct Detroit Edison to send the monthly bill to any third party, including the Alternative Electric Supplier.

6.4 Disconnection for Non-Payment

Customers will be subject to disconnection for non-payment of Detroit Edison distribution charges, that are not in dispute, in accordance with the rules described in Detroit Edison's Rules and Regulations, Section 2.5.

7. DISTRIBUTION CONTRACT CAPACITY

7.1 All Interval Demand Metered Customers shall contract for an amount of capacity sufficient to meet the maximum requirements of all Load connected to the Detroit Edison Distribution System at the Customer's Location. The Distribution Contract Capacity will initially be set at the greater of: 1) the previously established Contract Capacity; 2) the previously established Distribution Contract Capacity; 3) the highest 30-minute integrated demand created during the previous 12 billing months at each voltage level (whether the Customer received service under this **Rider** or a Detroit Edison retail tariff or contract), for each Location. Any single 30-minute integrated reading of the Interval Demand Meter in any month that exceeds the Distribution Contract Capacity then in effect shall become the new Distribution Contract Capacity. Customers not having previously established service requirements shall contract with Detroit Edison for a specified Distribution Contract Capacity in kW sufficient to meet the maximum requirements for each location.

7.2 Detroit Edison will provide the necessary facilities to deliver electric power from its Distribution System at the Distribution Contract Capacity. Any incremental cost incurred by Detroit Edison to provide the necessary facilities to meet the Customer's increased demand for distribution services over the Distribution Contract Capacity existing when service commences under this **Rider** shall be the responsibility of the Customer. Once established, the Distribution Contract Capacity shall not decrease during the contract term unless there is a specific permanent reduction in connected load.

8. RATES AND CHARGES

8.1 RATE PER MONTH

Delivery Charges: *These charges are applicable to Full Service and Retail Access Service customers.*

Service Charge:

As shown on the customer's overlying applicable rate schedule

Distribution Charge:

As shown on the customer's overlying applicable rate schedule

8.2 Any additional Transition Charges as may be approved by the Commission.

6.4 Disconnection for Non-Payment

Customers will be subject to disconnection for non-payment of Detroit Edison distribution charges, that are not in dispute, in accordance with the rules described in Detroit Edison's Rules and Regulations, Section 2.5.

7. Distribution Contract Capacity

7.1 All Interval Demand Metered Customers shall contract for an amount of capacity sufficient to meet the maximum requirements of all Load connected to the Detroit Edison Distribution System at the Customer's Location. The Distribution Contract Capacity will initially be set at the greater of: 1) the previously established Contract Capacity; 2) the previously established Distribution Contract Capacity; 3) the highest 30-minute integrated demand created during the previous 12 billing months at each voltage level (whether the Customer received service under this tariff or a Detroit Edison retail tariff or contract), for each Location. Any single 30-minute integrated reading of the Interval Demand Meter in any month that exceeds the Distribution Contract Capacity then in effect shall become the new Distribution Contract Capacity. Customers not having previously established service requirements shall contract with Detroit Edison for a specified Distribution Contract Capacity in kW sufficient to meet the maximum requirements for each location.

7.2 Detroit Edison will provide the necessary facilities to deliver electric power from its Distribution System at the Distribution Contract Capacity. Any incremental cost incurred by Detroit Edison to provide the necessary facilities to meet the Customer's increased demand for distribution services over the Distribution Contract Capacity existing when service commences under this tariff shall be the responsibility of the Customer. Once established, the Distribution Contract Capacity shall not decrease during the contract term unless there is a specific permanent reduction in connected load.

Public Service Commission in Case
No. U-12489 dated December 20, 2001

RETAIL ACCESS SERVICE TARIFF - continued

8.2 Marketers desiring to supply Power to Customers through Retailers, under the terms of this Retail Access Service Tariff, must comply with all statutory and regulatory requirements, state and federal law and must enter into agreements satisfactory to the Company for:

- (i) the payment of Transmission Charges and other charges
- (ii) the provision and exchange of Customer information associated with service under this tariff,
- (iii) the supply, scheduling and receipt of Power to be received by the Company from the Marketer for delivery to the Customer,
- (iv) the supply and scheduling of, and payment for, any backup service to be provided by the Company, and
- (v) transmission service as Designated Agent of the Customer under the Company's Open Access Transmission Tariff which agency shall only be effective so long as the Marketer is not in default of any obligation to the Company.

8.3 Real Power Losses: A Marketer is responsible for replacing losses associated with the delivery of power to the Customer's metered Point of Delivery. The amount of Power delivered by the Company on the Company's Distribution System to the Point of Delivery shall be adjusted using the following Real Power Loss Factors for distribution service:

	<u>1st Quarter</u>	<u>2nd Quarter</u>	<u>3rd Quarter</u>	<u>4th Quarter</u>
Secondary	10.88%	11.95%	12.01%	10.23%
4.8/13.2 kV	6.61%	7.13%	7.37%	6.31%
24kV/41.6 kV	1.86%	2.09%	2.34%	1.90%
120 kV and above	0.55%	0.57%	0.57%	0.55%

Marketers must schedule and supply an amount of Power equal to its Customer's load x $[(1 + D\%) \times (1 + T\%)]$ to account for losses on the Company's Transmission and Distribution System, where T% is the applicable loss factor contained in the Company's Open Access Transmission Tariff and D% is the applicable loss factor from the table above.

9. (Held for Future Use)

10. OTHER PROVISIONS

- 10.1 Retail Access Customers will be subject to the relevant curtailment procedure contained in Detroit Edison's electrical Procedures, Rule B-3.7. Detroit Edison shall give Retail Access Customers the same priorities in curtailment situations as it gives Full Service Customers.
- 10.2 All Points of Receipt for Power produced within the Detroit Edison retail service territory for delivery to Customers within that territory shall be considered as being points located on the ITC Transmission System.
- 10.3 All electric generation equipment connected in parallel with the Detroit Edison system must ***meet the interconnection requirements of Detroit Edison specified in "The Michigan Electric Utility Generation Interconnection Requirements" as approved by the Michigan Public Service Commission and the customer must enter into an Interconnection and Operating Agreement with the Company before parallel operation will be permitted.***
- 10.4 Customer equipment must be operated so that voltage flicker and harmonics on the Detroit Edison Distribution System shall not exceed permissible limits established by Detroit Edison and by IEEE Standard 519, respectively. Failure to comply with this requirement may result in discontinuance of service to the Customer and disconnection of Customer's Load from the Detroit Edison system.
- 10.5 Redundant services requested by the Customer may be provided under separate agreement.
- 10.6 Detroit Edison's Rules and Regulations as currently in effect are incorporated by reference into this ***Rider*** to the extent applicable and, Rule C-2.2(2) notwithstanding, only to the extent not inconsistent with the terms of this ***Rider***.

UNDER AUTHORITY OF ORDER OF THE
MICHIGAN PUBLIC SERVICE COMMISSION
DATED DECEMBER 22, 2005
IN CASE NO. U-14399

(Continued From Sheet No. EC2j)

8. RATES AND CHARGES (Continued)

8.2 System Use Charge

The System Use Charge is determined as follows:

8.2.1 Customers with Interval Demand Meters

The System Use Charge shall be the product of the applicable rate and the Customer's maximum demand, at each voltage level, for each Location. The maximum demand shall be the highest 30-minute integrated kW demand created during the current billing month or previous 11 billing months at each voltage level (whether the Customer received service under this tariff or a Detroit Edison retail tariff or contract), but not less than 50% of Distribution Contract Capacity.

8.2.2 Customers with Energy Meters

The System Use Charge shall be the product of the applicable rate as shown in Section 8.7 and the Customer's Maximum Demand for each location. The Maximum Demand shall be the highest demand created during the current billing month or previous 11 billing months. The Maximum Demand shall be computed by applying demand conversion tables to electric usage as reflected on the energy meter, but not less than 50% of Distribution Contract Capacity.

8.3 Substation Charge

A substation charge shall apply to Customers with service at a service voltage level of 24kV or above who are provided service through a substation owned by Detroit Edison and dedicated to the Customer's use. The Substation Charge shall be the product of the applicable rate as shown in section 8.6 and the Distribution Contract Capacity.

8.4 Transition Charge

The Transition Charge recovers the costs associated with implementing the restructuring of the electric power supply industry. Pursuant to MPSC Order No. U-13808, effective **December 1, 2005**, the transition charge shall be **0.3 mills (0.03¢)** per kWh for Customers served at secondary voltage and **0.1 mills (0.01¢)** per kWh for all other customers.

The System Use Charge shall be the product of the applicable rate as shown in section 8.7 and the Customer's energy consumption.

8.3 Substation Charge

A substation charge shall apply to Customers with service at a service voltage level of 24kV or above who are provided service through a substation owned by Detroit Edison and dedicated to the Customer's use. The Substation Charge shall be the product of the applicable rate as shown in section 8.6 and the Distribution Contract Capacity.

8.4 Transition Charge

The Transition Charge recovers the costs associated with implementing the restructuring of the electric power supply industry. Through 12/31/2001 this charge will equal the bid amount associated with the capacity rights used to enroll the Customer. Pursuant to MPSC Order No. U-13350, the transition charge shall be 0.00¢ per kWh. As ordered in Case No. U-12639, the following 10d(5) adjustments shall also apply:

	10d(5) Securitization Offset	10(d)5 Equalization Adjustment
Residential	0.424¢/kWh	-0.46¢/kWh
Commercial & Industrial Secondary	0.424¢/kWh	-0.48¢/kWh
Commercial & Industrial Primary	0.424¢/kWh	-0.28¢/kWh

On January 15, 2004, in its Order in Case No. U-13933, the MPSC authorized the Company to terminate the Equalization Adjustment credit for EC2 customers with annual peak demands of 15kW or greater.

RETAIL ACCESS SERVICE TARIFF - continued

8.4 Reciprocity: The Company will not accept power from a Marketer that does not contractually agree to provide the Company with reciprocal access to retail consumers. A reasonable level of reciprocity between the Company and the prospective Marketer and its affiliates must be established.

Through December 31, 2001:

In-state and out-of-state utilities and utility affiliates must consent to open the same relative amount of retail Customer load to competition by the Company. Further, the consent of out-of-state utilities and utility affiliates to this reciprocity requirement must be expressed as a provision of an enforceable contract. A municipal utility or a municipal power agency is required to provide reciprocity only for the type of service it provides and in the same relative amount.

On and after January 1, 2002:

No Michigan-based electric utility shall be permitted to utilize the Company's system to make retail sales unless the utility wishing to make the sale provides comparable Retail Open Access Service to retail Customers located within its service territory.

No generation supplier that provides retail distribution services, or that has an affiliate that provides retail distribution services, shall be permitted to utilize the Company's system to make retail sales unless the supplier or its affiliate provides comparable Retail Open Access Service. If the transaction involves an intermediary (such as a marketer or broker), the reciprocity obligation may be satisfied by either the regional transmission/distribution affiliate of the intermediary or by the owner of the generation source or its regional transmission/distribution affiliate.

"Comparable" Retail Open Access Service is one which (i) provides for Retail Open Access Service in an amount of retail Customer load equivalent to that provided by the Company, and (ii) specifies rates, terms, and conditions that are equivalent to those offered by the Company, and that have been approved by all applicable regulatory authorities for use in Retail Open Access Service transactions.

(Continued From Sheet No. EC2k)

ALTERNATIVE ELECTRIC SUPPLIER SECTION

11. ALTERNATIVE ELECTRIC SUPPLIER

- 11.1 This **Rider** section outlines the rights and responsibilities of Alternative Electric suppliers and Detroit Edison when enrolling and serving Customers under retail access service. The Alternative Electric Supplier is the retail seller of electric supply to the Customer on Detroit Edison's Distribution System.
- 11.2 If an Alternative Electric Supplier or Marketer fails to pay amounts due Detroit Edison or otherwise fails to perform obligations undertaken in connection with service to a Customer, Detroit Edison will give the Customer notice of the Alternative Electric Supplier's or Marketer's default. If the Customer, its Alternative Electric Supplier, or its Marketer fails to pay amounts due Detroit Edison or otherwise fails to comply with the provisions of the applicable Tariffs or agreements with Detroit Edison, retail access service may be terminated. Unless the Customer, Alternative Electric Supplier or Marketer cures the default with Detroit Edison or the Customer changes its Alternative Electric Supplier, the Customer may be returned to Detroit Edison Full Service subject to the provisions of Section 5.4.
- 11.3 The Alternative Electric Supplier is responsible for all of the Alternative Electric Supplier charges associated with its Customers until retail access service is terminated.
- 11.4 Termination of retail access service to a Customer can be initiated by the Alternative Electric Supplier, the Customer or Detroit Edison. Alternative Electric Suppliers and Detroit Edison shall comply with the billing rules that govern the shut off of service, R 460.2101 et seq. and R 460.3903 et seq. except that instead of providing a notice of termination, Alternative Electric Suppliers shall provide a notice of return to full service.

12. CREDITWORTHINESS

- 12.1 There is no creditworthiness requirement for Alternative Electric Supplier's unless the Alternative Electric Supplier is purchasing products or services from Detroit Edison. Alternative Electric Suppliers who purchase products or services from Detroit Edison must demonstrate and maintain current creditworthiness in an amount sufficient to cover anticipated charges for all those products or services. For unsecured credit, the Alternative Electric Supplier must provide three (3) years of audited financial statements, including notes, having an acceptable amount of positive tangible net worth, and meeting risk parameters derived from an analysis of its financial statements. The Alternative Electric Supplier may provide alternative security or credit enhancement, such as a letter of guarantee, letter of credit or prepayment. Detroit Edison will use reasonable credit review procedures which may include, but are not limited to, review of the Alternative Electric Supplier's financial statements, verification that the Alternative Electric Supplier is not operating under state or federal bankruptcy laws, and has no pending lawsuits or regulatory proceedings or judgments outstanding which would have a material adverse affect on the Alternative Electric Supplier and its ability to perform its obligations. Affiliates of Detroit Edison must meet these same creditworthiness requirements.

The amount of creditworthiness required is equivalent to two months expected exposure.

Following 24 months of full and timely payment to Detroit Edison for service provided, an Alternative Electric Supplier shall be deemed to have sufficient credit to satisfy Detroit Edison's requirements.

9. LIABILITY AND EXCLUSIONS

Liability of the Company and Exclusion of Consequential Damages

9.1 In no event will the Company or its suppliers be liable under any cause of action relating to the subject matter of this rate schedule, whether based on contract, warranty, tort (including negligence), strict liability, indemnity or otherwise for any incidental or consequential damages including but not limited to loss of use, interest charges, inability to operate full capacity, lost profits or claims of Customer's customers.

9.2 The Company's total liability to the Customer for all claims arising out of or related to service provided under this rate schedule, whether based on contract, warranty, tort (including negligence), strict liability, indemnity or otherwise shall not exceed the amount paid by the Customer to the Company for the Location involved during the month in which the claim arose.

9.3 The Company will not be liable to a Customer for damages caused by interruption of service, voltage or frequency variations, single-phase supply to three-phase lines, reversal of phase rotation, or carrier-current frequencies imposed by the Company for system operations or equipment control except such as result from the failure of the Company to exercise reasonable care and skill in furnishing the service. The Customer should install protective equipment if such occurrences might damage its apparatus.

10. OTHER PROVISIONS

10.1 All Points of Receipt for Power produced within the Company's retail service territory for delivery to Customers within that territory shall be considered as being points located on the Company's Transmission System.

10.2 Customers, Retailers, or Marketers desiring to operate electric generation equipment connected in parallel with the Company's system must comply with the Company's Protective Relaying, Operating and Telemetering Guidelines for Independently Owned Generation and before operating such equipment must obtain certification, in writing, from the Company that the conditions outlined in the Guidelines have been met.

10.3 Customer equipment must be operated so that voltage flicker and harmonics on the distribution system of the Company shall not exceed permissible limits established by the Company. Failure to comply with this requirement may result in discontinuance of service to the Customer and disconnection of Customer's Load from the Company's system.

10.4 The Company's Rules and Regulations as currently in effect are incorporated by reference into this tariff to the extent applicable and, Rule C-2.2(2) notwithstanding, only to the extent not inconsistent with the terms of this Tariff.

13. ELECTRONIC BUSINESS TRANSACTIONS

- 13.1 Unless specified otherwise by Detroit Edison in a Commission-approved tariff, Alternative Electric Suppliers shall transact all business with Detroit Edison electronically.
- 13.2 Unless otherwise specified by Detroit Edison in a Commission-approved tariff, all payments made to Detroit Edison by the Alternative Electric Supplier will be made by electronic funds transfer to the Detroit Edison account.

14. CONDITIONS PRECEDENT TO CUSTOMER ENROLLMENT

The Alternative Electric Supplier will not be eligible to enroll Customers unless and until the following conditions precedent have been satisfied and continue to be satisfied:

- 14.1 The Alternative Electric Supplier has been granted a license by the Commission.
- 14.2 The Alternative Electric Supplier has demonstrated electronic communication and commerce capability, which meets Detroit Edison's standards and protocols as defined in tariffs approved by the Commission.
- 14.3 The Alternative Electric Supplier has an executed contract with a qualified Marketer, as evidenced in an executed Alternative Electric Supplier-Marketer Notice.

15. CONDITIONS PRECEDENT FOR SERVING CUSTOMERS

The Alternative Electric Supplier will not be permitted to serve or continue to serve Customers unless and until the following conditions precedent have been satisfied and maintained:

- 15.1 The Alternative Electric Supplier has satisfied and continues to satisfy all conditions in Section 14.
- 15.2 All required Customer metering equipment is in place and functioning properly.
- 15.3 The Alternative Electric Supplier has complied with and continues to comply with all provisions of this *Rider*.

DATED DECEMBER 22, 2005
IN CASE NO. U-14399

(Continued From Sheet No. EC2l)

8. RATES AND CHARGES (Continued)

8.7 Single-Phase Distribution Service

Customers receiving single-phase electric service at 480 volts or less, using Detroit Edison-owned transformation, shall be charged for retail access service as follows:

Charge	<i>Single-Phase</i>
Meter Type	Energy Meter
Service Charge	\$5.95/month
System Use Charge	\$3.42/kW/month
<u>Choice Stabilization Adjustment</u>	<u>0.1¢/kWh</u>
Surcharges and Credits	Schedule B4.9
Any additional Transition, True-Up Charges, Surcharges and Credits as may be approved by the Commission	

All charges will be based on the metered quantity as determined by the meters at the Customer Location.

8.8 Power Factor and Excess Reactive Demand For Customers With Interval Demand Metering

A power factor of less than 70% is not permitted and necessary corrective equipment must be installed by the Customer to correct to a minimum level of 70%. Power factor and excess Reactive Demand charges will be calculated at each Customer location at the time of the Location's single highest 30-minute integrated kW reading of the Interval Demand Meter during the on-peak hours of the billing period, which are those hours from 7 a.m. until 11 p.m. consistent with the ITC Open Access Transmission Tariff. Excess Reactive Demand is any Reactive Demand resulting from operations below 80% power factor. A monthly charge of \$3.50/kVAR will be applied to excess Reactive Demand.

9. (Held for Future Use)

10. OTHER PROVISIONS

10.1 Retail Access Customers will be subject to the relevant curtailment procedure contained in Detroit Edison's electrical Procedures, Rule B-3.7. Detroit Edison shall give Retail Access Customers the same priorities in curtailment situations as it gives Full Service Customers.

10.2 All Points of Receipt for Power produced within the Detroit Edison retail service territory for delivery to Customers within that territory shall be considered as being points located on the ITC Transmission System.

16. RATES AND CHARGES

16.1 The Alternative Electric Supplier shall pay Detroit Edison the following:

- 16.1.1 An Alternative Electric Supplier enrolling Customer(s) with the Complete Billing option shall pay Detroit Edison a one-time charge of \$5,000 for the Alternative Electric Supplier's initial rate-ready schedule set-up for up to sixty rates, regardless of the number of Customers electing this option.
- 16.1.2 An Alternative Electric Supplier enrolling Customer(s) with the Complete Billing option shall pay Detroit Edison a monthly transaction charge of \$0.20 per Customer location billed under the Complete Billing option.
- 16.1.3 An Alternative Electric Supplier enrolling Customer(s) with the Complete Billing option shall pay Detroit Edison \$1,000 per occurrence for each change request made by the Alternative Electric Supplier to its rate-ready schedule, regardless of the number of changes in the request or the number of Customers effected.
- 16.1.4 Any other charges to the Alternative Electric Supplier for services provided by Detroit Edison will be negotiated on an individual case basis.

16.2 Detroit Edison will provide two (2) Customer Billing options-Complete Billing by Detroit Edison and Separate Billing by Detroit Edison and the Alternative Electric Supplier. It is the responsibility of the Alternative Electric Supplier to identify on the Customer Enrollment Form which of these options the Customer has requested.

16.3 Allocation of Partial Payments Under Complete Billing

In the event the Customer submits a partial payment, the receipts will be applied as follows:

- all past due and current Detroit Edison distribution and distribution related charges
- past due and current Alternative Electric Supplier energy charges
- other Detroit Edison charges
- other Alternative Electric Supplier charges

Partial payments resulting from disputed charges shall be allocated first to undisputed charges in each of the above four categories and then to disputed charges in each of the above four categories.

16.4 Detroit Edison will not pursue collection actions for any Alternative Electric Supplier.

10. OTHER PROVISIONS (Continued)

- 10.3** All electric generation equipment connected in parallel with the Detroit Edison system must comply with the Detroit Edison Protective Relaying, Operating and Telemetering Guidelines for Independently Owned Generation and before operating such equipment must obtain certification, in writing, from Detroit Edison that the conditions outlined in the guidelines have been met.
- 10.4** Customer equipment must be operated so that voltage flicker and harmonics on the Detroit Edison Distribution System shall not exceed permissible limits established by Detroit Edison and by IEEE Standard 519, respectively. Failure to comply with this requirement may result in discontinuance of service to the Customer and disconnection of Customer's Load from the Detroit Edison system.
- 10.5** Redundant services requested by the Customer may be provided under separate agreement.
- 10.6** Detroit Edison's Rules and Regulations as currently in effect are incorporated by reference into this tariff to the extent applicable and, Rule C-2.2(2) notwithstanding, only to the extent not inconsistent with the terms of this Tariff.

ALTERNATIVE ELECTRIC SUPPLIER SECTION

11. ALTERNATIVE ELECTRIC SUPPLIER

- 11.1** This Tariff section outlines the rights and responsibilities of Alternative Electric suppliers and Detroit Edison when enrolling and serving Customers under retail access service. The Alternative Electric Supplier is the retail seller of electric supply to the Customer on Detroit Edison's Distribution System.
- 11.2** If an Alternative Electric Supplier or Marketer fails to pay amounts due Detroit Edison or otherwise fails to perform obligations undertaken in connection with service to a Customer, Detroit Edison will give the Customer notice of the Alternative Electric Supplier's or Marketer's default. If the Customer, its Alternative Electric Supplier, or its Marketer fails to pay amounts due Detroit Edison or otherwise fails to comply with the provisions of the applicable Tariffs or agreements with Detroit Edison, retail access service may be terminated. Unless the Customer, Alternative Electric Supplier or Marketer cures the default with Detroit Edison or the Customer changes its Alternative Electric Supplier, the Customer may be returned to Detroit Edison Full Service subject to the provisions of **Section 5.3**.
- 11.3** The Alternative Electric Supplier is responsible for all of the Alternative Electric Supplier charges associated with its Customers until retail access service is terminated.
- 11.4** Termination of retail access service to a Customer can be initiated by the Alternative Electric Supplier, the Customer or Detroit Edison. Alternative Electric Suppliers and Detroit Edison shall comply with the billing rules that govern the shut off of service, R 460.2101 et seq. and R 460.3903 et seq. except that instead of providing a notice of termination, Alternative Electric Suppliers shall provide a notice of return to full service.

10.6 Detroit Edison's Rules and Regulations as currently in effect are incorporated by reference into this tariff to the extent applicable and, Rule C-2.2(2) notwithstanding, only to the extent not inconsistent with the terms of this Tariff.

ALTERNATIVE ELECTRIC SUPPLIER SECTION

11. Alternative Electric Supplier

11.1 This Tariff section outlines the rights and responsibilities of Alternative Electric suppliers and Detroit Edison when enrolling and serving Customers under retail access service. The Alternative Electric Supplier is the retail seller of electric supply to the Customer on Detroit Edison's Distribution System.

11.2 If an Alternative Electric Supplier or Marketer fails to pay amounts due Detroit Edison or otherwise fails to perform obligations undertaken in connection with service to a Customer, Detroit Edison will give the Customer notice of the Alternative Electric Supplier's or Marketer's default. If the Customer, its Alternative Electric Supplier, or its Marketer fails to pay amounts due Detroit Edison or otherwise fails to comply with the provisions of the applicable Tariffs or agreements with Detroit Edison, retail access service may be terminated. Unless the Customer, Alternative Electric Supplier or Marketer cures the default with Detroit Edison or the Customer changes its Alternative Electric Supplier, the Customer may be returned to Detroit Edison Full Service subject to the provisions of Section 5.4.

11.3. The Alternative Electric Supplier is responsible for all of the Alternative Electric Supplier charges associated with its Customers until retail access service is terminated.

11.4 Termination of retail access service to a Customer can be initiated by the Alternative Electric Supplier, the Customer or Detroit Edison. Alternative Electric Suppliers and Detroit Edison shall comply with the billing rules that govern the shut off of service, R 460.2101 et seq. and R 460.3903 et seq. except that instead of providing a notice of termination, Alternative Electric Suppliers shall provide a notice of return to full service.

17. DISPUTE RESOLUTION

- 17.1 Detroit Edison will have no duty or obligation to resolve any complaints or disputes between or among Alternative Electric Suppliers and Marketers or any combination thereof, related to but not limited to switching Alternative Electric Suppliers, switching Marketers, termination of retail access service, Customer enrollment or Customer billing options.
- 17.2 In the event of a dispute between Detroit Edison and an Alternative Electric Supplier, including but not limited to "Events of Default," the Parties may attempt, in good faith, to resolve the dispute amicably and promptly. If the dispute is not resolved in five (5) business days, the Parties may attempt to resolve the dispute by promptly appointing a senior representative of each Party to attempt to mutually agree upon a resolution. The two senior members shall meet within ten (10) business days. If the two senior representatives cannot reach a resolution within a 30-day period, the dispute may, on demand of either Party, be submitted to arbitration as provided in this section.
- 17.3 The dispute will be submitted for resolution in accordance with the American Arbitration Association ("AAA") Commercial Arbitration Rules. The judgment rendered by the arbitrator may be enforced in any court having jurisdiction of the subject matter and the Parties.
- 17.4 If the parties are unable to agree on an arbitrator, the arbitrator shall be determined by AAA.
- 17.5 The findings and award of the arbitrator shall be final and conclusive and shall be binding upon the Parties, except as otherwise provided by law. Any award shall specify the manner and extent of the division of the costs between the Parties.
- 17.6 Nothing in this Section shall restrict the rights of either Party to file a formal complaint with an appropriate regulatory agency regarding any issue the adjudication of which lies within the exclusive jurisdiction of the regulatory agency.

18. SLAMMING PROTECTION

- 18.1 Alternative Electric Suppliers shall warrant that the Customer has duly authorized the submitted enrollment and the Alternative Electric Supplier has complied with the provisions of 2000 P.A. 141 or any applicable commission rules developed pursuant to 2000 P.A. 141 to prevent slamming.
- 18.2 Detroit Edison provides Residential Customers with pending enrollments with an Alternative Electric Supplier, a three-day notice period in which the Customer may cancel the enrollment before the switch is executed. If the Customer challenges the enrollment the switch transaction is cancelled, the affected Alternative Electric Supplier(s) are notified, and the enrolling Alternative Electric Supplier shall be assessed the \$5 switching fee instead of the Customer. If the Customer cancels an enrollment in error, the enrolling Alternative Electric Supplier's remedy is to discuss the situation with the Customer and submit a new enrollment.

Commercial and Industrial ROA Customers' right to cancel an enrollment shall be in accordance with the terms of their contract with their Alternative Electric Supplier(s).

12. Creditworthiness

12.1 There is no creditworthiness requirement for Alternative Electric Supplier's unless the Alternative Electric Supplier is purchasing products or services from Detroit Edison. Alternative Electric Suppliers who purchase products or services from Detroit Edison must demonstrate and maintain current creditworthiness in an amount sufficient to cover anticipated charges for all those products or services. For unsecured credit, the Alternative Electric Supplier must provide three (3) years of audited financial statements, including notes, having an acceptable amount of positive tangible net worth, and meeting risk parameters derived from an analysis of its financial statements. The Alternative Electric Supplier may provide alternative security or credit enhancement, such as a letter of guarantee, letter of credit or prepayment. Detroit Edison will use reasonable credit review procedures which may include, but are not limited to, review of the Alternative Electric Supplier's financial statements, verification that the Alternative Electric Supplier is not operating under state or federal bankruptcy laws, and has no pending lawsuits or regulatory proceedings or judgments outstanding which would have a material adverse effect on the Alternative Electric Supplier and its ability to perform its obligations. Affiliates of Detroit Edison must meet these same creditworthiness requirements.

12.2 The amount of creditworthiness required is equivalent to two months expected exposure.

12.3 Following 24 months of full and timely payment to Detroit Edison for service provided, an Alternative Electric Supplier shall be deemed to have sufficient credit to satisfy Detroit Edison's requirements.

13. Electronic Business Transactions

13.1 Unless specified otherwise by Detroit Edison in a Commission-approved tariff, Alternative Electric Suppliers shall transact all business with Detroit Edison electronically.

13.2 Unless otherwise specified by Detroit Edison in a Commission-approved tariff, all payments made to Detroit Edison by the Alternative Electric Supplier will be made by electronic funds transfer to the Detroit Edison account.

14. Conditions Precedent to Customer Enrollment

The Alternative Electric Supplier will not be eligible to enroll Customers unless and until the following conditions precedent have been satisfied and continue to be satisfied:

14.1 The Alternative Electric Supplier has been granted a license by the Commission.

14.2 The Alternative Electric Supplier has demonstrated electronic communication and commerce capability, which meets Detroit Edison's standards and protocols as defined in tariffs approved by the Commission.

19. REAL POWER LOSSES

The Marketer used by the Alternative Electric Supplier is responsible for replacing losses associated with the delivery of power to the Customer's meter. The amount of Power delivered by Detroit Edison on the Detroit Edison Distribution System to the Customer's meter shall be adjusted using the following real power loss factors for distribution service:

	<u>1st Quarter</u>	<u>2nd Quarter</u>	<u>3rd Quarter</u>	<u>4th Quarter</u>
Secondary	10.88%	11.95%	12.01%	10.23%
4.8/13.2 kV	6.61%	7.13%	7.37%	6.31%
24kV/41.6 kV	1.86%	2.09%	2.34%	1.90%
120 kV and above	0.55%	0.57%	0.57%	0.55%

Marketers must schedule and supply an amount of Power equal to its Customers' hourly usage x $[(1 + D\%) \times (1 + T\%)]$ to account for losses on the ITC Transmission and Detroit Edison Distribution System, where T% is the applicable loss factor contained in the ITC Open Access Transmission Tariff and D% is the applicable loss factor from the table above.

16.1 The Alternative Electric Supplier shall pay Detroit Edison the following:

16.1.1 An Alternative Electric Supplier enrolling Customer(s) with the Complete Billing option shall pay Detroit Edison a one-time charge of \$5,000 for the Alternative Electric Supplier's initial rate-ready schedule set-up for up to sixty rates, regardless of the number of Customers electing this option.

16.1.2 An Alternative Electric Supplier enrolling Customer(s) with the Complete Billing option shall pay Detroit Edison a monthly transaction charge of \$0.20 per Customer location billed under the Complete Billing option.

16.1.3 An Alternative Electric Supplier enrolling Customer(s) with the Complete Billing option shall pay Detroit Edison \$1,000 per occurrence for each change request made by the Alternative Electric Supplier to its rate-ready schedule, regardless of the number of changes in the request or the number of Customers effected.

16.1.4 Any other charges to the Alternative Electric Supplier for services provided by Detroit Edison will be negotiated on an individual case basis.

16.2 Detroit Edison will provide two (2) Customer Billing options-Complete Billing by Detroit Edison and Separate Billing by Detroit Edison and the Alternative Electric Supplier. It is the responsibility of the Alternative Electric Supplier to identify on the Customer Enrollment Form which of these options the Customer has requested.

Public Service Commission in Case
No. U-12489 dated December 20, 2001

(Continued From [Sheet No. EC2p](#))

MARKETER SECTION

20. OPTIONAL LOAD PROFILE MANAGEMENT SERVICE

Available on an optional basis, Detroit Edison will provide forecasts of the hourly energy requirements for the Marketer's energy-only metered customers. If the marketer supplies energy in accordance with the provided forecasts, the marketer will not be subject to imbalance penalties, only a true-up for actual energy consumed compared to energy supplied. The term for this service is 12 month, extending thereafter from month to month until terminated by 30-day written notice by the Marketer.

The Load Profile Management Service Charge is \$.0034 per kWh for all kWh consumed.

20.1 Load Profiling

Marketers with Customers who do not have demand and energy hourly recording (Interval Demand) meters shall comply with the following provisions:

- (1) Interval Demand Meters shall be installed on a sample set of Customers to achieve a statistically accurate sample rate of $80\% \pm 20\%$ on an hourly basis during the on-peak hours. Such sample set of Interval Demand Meters shall be furnished, installed, maintained and owned by Detroit Edison.
- (2) The hourly meter data from the sample set meters, along with historical customer usage history, will be used by Detroit Edison to generate and maintain load leading profiles for each Marketer. Load leading profiles will be provided by Detroit Edison to the Marketer by 2:00 PM Eastern Time on the Wednesday before the start of the next week (or Tuesday if Thursday is a holiday). Detroit Edison may adjust each profile by providing notice at least one and one-half hours in advance of the effective time of the schedule change. The load leading profiles shall be used by the Marketers to schedule Power deliveries to the Point of Receipt. Scheduling for Power delivery, using the load leading profile, shall be in accordance with Rule F5.I.

20.2 Power Scheduling

If the Marketer scheduled Power in accordance with the load leading profiles provided by Detroit Edison, then no hourly Energy Imbalance penalties shall occur. If the Marketer did not schedule Power in accordance with the load leading profiles, an hourly Energy Imbalance penalty may apply. Any hourly energy imbalance penalties or charges shall be subject to the Energy Imbalance Service Schedule in the ITC's FERC Open Access Tariff.

16. RATES AND CHARGES (Continued)

16.3 Allocation of Partial Payments Under Complete Billing

In the event the Customer submits a partial payment, the receipts will be applied as follows:

- all past due and current Detroit Edison distribution and distribution related charges
- past due and current Alternative Electric Supplier energy charges
- other Detroit Edison charges
- other Alternative Electric Supplier charges

Partial payments resulting from disputed charges shall be allocated first to undisputed charges in each of the above four categories and then to disputed charges in each of the above four categories.

16.4 Detroit Edison will not pursue collection actions for any Alternative Electric Supplier.

17. DISPUTE RESOLUTION

17.1 Detroit Edison will have no duty or obligation to resolve any complaints or disputes between or among Alternative Electric Suppliers and Marketers or any combination thereof, related to but not limited to switching Alternative Electric Suppliers, switching Marketers, termination of retail access service, Customer enrollment or Customer billing options.

17.2 In the event of a dispute between Detroit Edison and an Alternative Electric Supplier, including but not limited to "Events of Default," the Parties may attempt, in good faith, to resolve the dispute amicably and promptly. If the dispute is not resolved in five (5) business days, the Parties may attempt to resolve the dispute by promptly appointing a senior representative of each Party to attempt to mutually agree upon a resolution. The two senior members shall meet within ten (10) business days. If the two senior representatives cannot reach a resolution within a 30-day period, the dispute may, on demand of either Party, be submitted to arbitration as provided in this section.

17.3 The dispute will be submitted for resolution in accordance with the American Arbitration Association ("AAA") Commercial Arbitration Rules. The judgment rendered by the arbitrator may be enforced in any court having jurisdiction of the subject matter and the Parties.

17.4 If the parties are unable to agree on an arbitrator, the arbitrator shall be determined by AAA.

17.5 The findings and award of the arbitrator shall be final and conclusive and shall be binding upon the Parties, except as otherwise provided by law. Any award shall specify the manner and extent of the division of the costs between the Parties.

17.6 Nothing in this Section shall restrict the rights of either Party to file a formal complaint with an appropriate regulatory agency regarding any issue the adjudication of which lies within the exclusive jurisdiction of the regulatory agency.

RETAIL ACCESS SERVICE TARIFF - continued

18. Slamming Protection

18.1 Alternative Electric Suppliers shall warrant that the Customer has duly authorized the submitted enrollment and the Alternative Electric Supplier has complied with the provisions of 2000 P.A. 141 or any applicable commission rules developed pursuant to 2000 P.A. 141 to prevent slamming.

18.2 Detroit Edison provides Residential Customers with pending enrollments with an Alternative Electric Supplier, a three-day notice period in which the Customer may cancel the enrollment before the switch is executed. If the Customer challenges the enrollment the switch transaction is cancelled, the affected Alternative Electric Supplier(s) are notified, and the enrolling Alternative Electric Supplier shall be assessed the \$5 switching fee instead of the Customer. If the Customer cancels an enrollment in error, the enrolling Alternative Electric Supplier's remedy is to discuss the situation with the Customer and submit a new enrollment.

Commercial and Industrial ROA Customers' right to cancel an enrollment shall be in accordance with the terms of their contract with their Alternative Electric Supplier(s).

19. Real Power Losses

The Marketer used by the Alternative Electric Supplier is responsible for replacing losses associated with the delivery of power to the Customer's meter. The amount of Power delivered by Detroit Edison on the Detroit Edison Distribution System to the Customer's meter shall be adjusted using the following real power loss factors for distribution service:

	<u>1st Quarter</u>	<u>2nd Quarter</u>	<u>3rd Quarter</u>	<u>4th Quarter</u>
Secondary	10.88%	11.95%	12.01%	10.23%
4.8/13.2 kV	6.61%	7.13%	7.37%	6.31%
24kV/41.6 kV	1.86%	2.09%	2.34%	1.90%
120 kV and above	0.55%	0.57%	0.57%	0.55%

Marketers must schedule and supply an amount of Power equal to its Customers' hourly usage x $[(1 + D\%) \times (1 + T\%)]$ to account for losses on the ITC Transmission and Detroit Edison Distribution System, where T% is the applicable loss factor contained in the ITC Open Access Transmission Tariff and D% is the applicable loss factor from the table above.

MARKETER SECTION

20. Optional Load Profile Management Service

The actual hourly Power consumption of Customers without Interval Demand Meters is unknown. Thus, the Marketer is not providing total load following for those Customers being supplied Power by the Marketer; Detroit Edison is providing this service. As compensation to Detroit Edison for providing generation resources to meet unmetered supply versus consumption deviations, the Marketer electing this service shall be charged a Profile Management Service Charge as set forth below.

The Load Profile Management Service Charge is \$.0046 per kWh for all kWh consumed.

20.1 Load Profiling

Retailers with Customers who do not have demand and energy hourly recording (Interval Demand) meters shall comply with the following provisions:

- (1) Interval Demand Meters shall be installed on a sample set of Customers to achieve a statistically accurate sample rate of $80\% \pm 20\%$ on an hourly basis during the on-peak hours. Such sample set of Interval Demand Meters shall be furnished, installed, maintained and owned by Detroit Edison.
- (2) The hourly meter data from the sample set meters, along with historical customer usage history, will be used by Detroit Edison to generate and maintain load leading profiles for each Marketer. Load leading profiles will be provided by Detroit Edison to the Marketer by 2:00 PM Eastern Time on the Wednesday before the start of the next week (or Tuesday if Thursday is a holiday). Detroit Edison may adjust each profile by providing notice at least one and one-half hours in advance of the effective time of the schedule change. The load leading profiles shall be used by the Marketers to schedule Power deliveries to the Point of Receipt. Scheduling for Power delivery, using the load leading profile, shall be in accordance with Rule F5.1.

20.2 Power Scheduling

If the Marketer scheduled Power in accordance with the load leading profiles provided by Detroit Edison, then no hourly Energy Imbalance penalties shall occur. If the Marketer did not schedule Power in accordance with the load leading profiles, an hourly Energy Imbalance penalty may apply. Any hourly energy imbalance penalties or charges shall be subject to the Energy Imbalance Service Schedule in the ITC's EERC Open Access Tariff.

RETAIL ACCESS SERVICE TARIFF - continued

MARKETER SECTION

20. Marketers

20.1 This Tariff section outlines the rights and responsibilities of Marketers and Detroit Edison when serving Customers under retail access service. The Marketer is an entity that takes title to power and has FERC authorization to market energy services. FERC authorization allows the Marketer to use transmission systems to move power from the generator(s) to the distribution system.

20.2 Marketers desiring to supply Power to Customers through Alternative Electric Suppliers, under the terms of this Retail Access Service Tariff, must comply with all statutory and regulatory requirements, state and federal law and must enter into agreements satisfactory to ITC and Detroit Edison for:

- (i) the payment of Transmission Charges and other charges
- (ii) the provision and exchange of Customer information associated with service under this tariff,
- (iii) the supply, scheduling and receipt of Power to be received by Detroit Edison from the Marketer for delivery to the Customer,
- (iv) the supply and scheduling of, and payment for, any backup service to be provided by Detroit Edison, and
- (v) transmission service under the ITC Open Access Transmission Service Tariff or JOATT in an amount sufficient to supply Power, including losses, to all Customers the Marketer intends to serve.

21. Real Power Losses

A Marketer is responsible for replacing losses associated with the delivery of power to the Customer's meter. Marketers must schedule and supply an amount of Power equal to its Customer's hourly usage x $[(1 + D\%) \times (1 + T\%)]$ to account for losses on the ITC Transmission and Detroit Edison Distribution Systems, where T% is the applicable loss factor contained in the ITC Open Access Transmission Tariff and D% is the applicable loss factor from the table in Section 18.

22. Reciprocity

22.1 If a municipally owned utility elects to provide electric generation service to retail Customers receiving delivery service from an electric utility, they must comply with the provision outlined in section 10y of 2000 P.A. 141.

No. U-12489 dated April 26, 2002.

RETAIL ACCESS SERVICE TARIFF - continued

22.2 Detroit Edison will not accept Power from a Marketer that does not contractually agree to provide Detroit Edison with reciprocal access to retail Customers. A reasonable level of reciprocity between Detroit Edison and the prospective Marketer and its affiliates must be established.

Through December 31, 2001:

In-state and out-of-state utilities and utility affiliates must consent to open the same relative amount of their retail Customer load to competition as Detroit Edison. Further, the consent of out-of-state utilities and utility affiliates to this reciprocity requirement must be expressed as a provision of an enforceable contract. A municipal utility or a municipal power agency is required to provide reciprocity only for the type of service it provides and in the same relative amount.

On and after January 1, 2002:

No Michigan-based electric utility shall be permitted to utilize Detroit Edison's Distribution System to make retail sales unless the utility wishing to make the sale provides comparable retail access service to Customers located within its service territory.

No generation supplier that provides retail distribution services, or that has an affiliate that provides retail distribution services, shall be permitted to utilize the Detroit Edison Distribution System to make retail sales unless the Marketer or its affiliate provides comparable retail access service. If the transaction involves an intermediary (such as a Marketer or broker), the reciprocity obligation may be satisfied by either the regional transmission/distribution affiliate of the intermediary or by the owner of the generation source or its regional transmission/distribution affiliate.

"Comparable" retail access service is one which; (i) provides for retail access service in an amount of Customer load equivalent to that provided by Detroit Edison, and; (ii) specifies rates, terms, and conditions that are equivalent to those offered by Detroit Edison, and that have been approved by all applicable regulatory authorities for use in retail access service transactions.

23. Marketer Participation in the Program The Marketer shall supply the following documentation to ITC prior to providing retail access service:

23.1 An Application for Transmission Service.

23.2 All applicable Transmission Service Agreement(s).

23.3 A Wholesale Power Supply Agreement for emergency energy supply service to provide power: 1) in the event the Marketer's power supply fails to be delivered until backup service (either Optional Retail Access Backup Service or wholesale backup service) is scheduled, or 2) in the event backup service is not contracted for or is not delivered.

RETAIL ACCESS SERVICE TARIFF - continued

23.4 The Marketer must demonstrate current creditworthiness in an amount sufficient to cover anticipated transmission charges and charges for other services provided by ITC. For unsecured credit, the Marketer must provide three (3) years of audited financial statements, including notes, having an acceptable amount of positive tangible net worth, and meeting risk parameters derived from an analysis of its financial statements. The Marketer may provide alternative security or credit enhancement, such as a letter of guarantee, letter of credit or prepayment. ITC will use reasonable credit review procedures which may include, but are not limited to, review of the Marketer's financial statements, verification that the Marketer is not operating under state or federal bankruptcy laws, and has no pending lawsuits or regulatory proceedings or judgments outstanding which would have a material adverse affect on the Marketer and its ability to perform its obligations. Affiliates of Detroit Edison must meet these same creditworthiness requirements.

23.4.1 The amount of credit required for transmission services and ancillary services is the total of three times the monthly charges, for the peak month, as observed in the last 12 months.

23.4.2 The amount of credit required for backup service for energy used during June, July and August is based on Market Priced Power.

23.4.3 The amount of credit required for backup service for energy used from September to May is based on Market Priced Power.

23.4.4 Evidence of credit must be received by ITC 30 days prior to Customers taking retail access service.

23.5 A signed Marketer Agreement.

23.6 An Alternative Electric Supplier-Marketer Notice evidencing the Marketer's agreement to provide Transmission Services, Ancillary services, and backup services to Customers for at least one Alternative Electric Supplier. If a Marketer is also serving as a qualified Alternative Electric Supplier, an Alternative Electric Supplier-Marketer Notice must still be forwarded to Detroit Edison showing the same entity as both the Alternative Electric Supplier and Marketer. If a Customer is serving as its own Marketer and Alternative Electric Supplier, an Alternative Electric Supplier-Marketer Notice must be forwarded to Detroit Edison showing the same entity (the Customer) as both the Marketer and Alternative Electric Supplier.

23.7 Certify that it meets all reciprocity requirements of Section 6 of the OATT and Section 22 of this tariff.

23.8 Where applicable, a Tax Exemption Certificate exempting the Marketer from sales tax for Transmission Services sold.

24. In addition to the documentation listed above, the Marketer, prior to being allowed to serve Customers, must:

24.1 Demonstrate that it is in full compliance with all FERC and OATT requirements; and

24.2 Demonstrate electronic communications and commerce capability which meets Detroit Edison's standards and protocols as defined on the Detroit Edison web site and in tariffs approved by the Commission.

24.3 Complete a Transmission Service Agreement Sink - Meter Relationship form which identifies the Transmission Service Agreement Sink identification code provided by ITC associated with each of its Alternative Electric Supplier's Customer meter number(s).

25. Marketer's Obligations as a Participant in Program

The Marketer agrees to serve all Customers enrolled by an Alternative Electric Supplier for which there is an active Alternative Electric Supplier-Marketer Notice on file with Detroit Edison. A Marketer acting as an Alternative Electric Supplier must fulfill all requirements of both a Marketer and an Alternative Electric Supplier.

25.1 The Marketer will arrange for all Transmission Services and Ancillary Services associated with service to a Customer.

25.2 The Marketer will comply with all applicable provisions of the OATT, the JOATT, this Tariff, any applicable federal, state or local law, ordinance, or regulation, and any applicable administrative or judicial order.

25.3 The Marketer will use the Transmission Service Agreement Sink identification code provided by ITC when reserving transmission and scheduling energy.

25.4 The Marketer will provide daily energy schedules for all services including losses associated with transmission and distribution, as required by the OATT or the Optional Retail Access Backup Tariff. The Marketer will pay applicable taxes.

25.5 The Marketer will pay ITC for all applicable transmission services, ancillary services and backup services provided by ITC to the Marketer for the Marketer's Customer(s) from the service commencement date to the service termination date. The Marketer shall pay Detroit Edison for any optional Emergency Energy Services and backup services purchased from the Detroit Edison merchant.

25.6 The Marketer will comply with all applicable requirements of NERC, ECAR or a successor organization associated with its deliveries to the ITC transmission system and will assume responsibility for any and all tagging requirements as well as providing all Sink information needed for completing the transmission service setup process.

25.7 The Marketer will notify ITC immediately of any material adverse change in Marketer's financial condition.

25.8 In the event of an interruption of its source the Marketer shall pay Detroit Edison for all power delivered in the place of the lost supply. Unless contracted for separately with Detroit Edison, the pricing for this service shall be the same as that specified in the Optional Retail Access Backup Service Tariff. The minimum charge for one hour will apply to this service, and subsequent usage will be rounded up to the next full hour.

RETAIL ACCESS SERVICE TARIFF - continued

25.9 A Marketer may obtain wholesale backup service from Detroit Edison, whereby Detroit Edison commits to supply scheduled power at wholesale to the Marketer sufficient to cover deficiencies in Marketer's supply of power to the Detroit Edison Distribution System. The Marketer is required to schedule this service. The Marketer will be billed for and shall pay for wholesale backup service.

25.10 Pursuant to ITC's Optional Retail Access Backup Service Tariff on file with the Michigan Public Service Commission an Alternative Electric Supplier for a Customer may contract for Optional Retail Access Backup Service. The Marketer, however, shall schedule this service. The Marketer will be billed for and shall pay for Power delivered.

25.11 A Marketer serving Customers under multiple Transmission Service Agreements must provide separate reservations and schedules for each.

25.12 A Marketer serving multiple Customers may not combine the reservations or schedules for Customers served under this Tariff with reservations and schedules for Customers served under other tariffs.

25.13 A Marketer serving both Interval Demand and Energy Metered accounts under a single Transmission Service Agreement may combine the loads from these accounts into a single integrated schedule.

25.14 A Marketer understands and agrees to be bound by all charges associated with demands determined using ITC profiling for Energy Metered accounts.

26. Detroit Edison and/or ITC Obligations to the Marketer

26.1 ITC shall provide Transmission Services pursuant to the OATT, the Marketer's Transmission Service Agreement(s), applicable FERC orders or rulings, the Marketers Agreement, and any and all applicable operating procedures used by Michigan Electric Power Coordination Center (MEPCC) and ITC in its daily management of its Transmission System.

26.2 ITC shall provide or arrange to provide all mandatory ancillary services, pursuant to the OATT.

26.3 ITC shall provide or arrange to provide all optional ancillary services, unless the Marketer demonstrates that it has acquired the optional ancillary services from another source, pursuant to the OATT.

26.4 Detroit Edison shall offer emergency energy service pursuant to the Wholesale Power Supply Agreement.

26.5 If contracted for, Detroit Edison shall provide Optional Retail Access Backup Service pursuant to the Optional Retail Access Backup Service Tariff on file with the Commission.

No. U-12489 dated December 20, 2001

RETAIL ACCESS SERVICE TARIFF - continued

27. Marketer Billing and Payment

27.1 Detroit Edison and ITC shall each bill the Marketer for services rendered in accordance with the terms and conditions outlined in this Tariff, the OATT, the Wholesale Power Supply Agreement, and the Optional Retail Access Backup Service Tariff.

27.2 ITC may send the Marketer a bill for transmission services and Ancillary Services, and Detroit Edison will send a separate bill for any applicable emergency energy services and backup services provided. ITC and Detroit Edison will render these bills within approximately the first ten (10) business days of each calendar month for service rendered in the previous calendar month. If any load profiled Customers are included in these billings, the imbalance billing will be delayed two months to allow for obtaining meter reads of usage for Customers in all billing cycles and applying the appropriate load curves.

27.3 Payment in full is due from the Marketer to ITC and Detroit Edison twenty (20) days from the date the bill is issued ("due date").

28. Events of Default

28.1 The Marketer will be in default if the Marketer:

28.1.1 Fails to maintain its creditworthiness and fails within ten (10) business days of written or electronic notification from ITC to reestablish creditworthiness; or

28.1.2 Fails to maintain qualification as a Marketer pursuant to sections 24 and 25 of this Tariff or to perform its obligations pursuant to Section 26 of this Tariff and fails within ten (10) business days of written or electronic notification from ITC to reestablish qualification and resume performance of its obligations; or

28.1.3 Fails to pay for services rendered by ITC or Detroit Edison and fails to remedy the default according to the OATT or this Tariff, if applicable; or, if not applicable, fails to remedy the default within thirty (30) calendar days of written or electronic notification from ITC or Detroit Edison, as appropriate, to make all payments in full to ITC and Detroit Edison; or

28.1.4 Fails to submit schedules prior to commencement of service as stipulated by the OATT. Scheduling functions shall be in accordance with NERC Policy 3. Failure to perform scheduling functions will contribute to noncompliance (as measured by four levels of noncompliance) of NERC Control Performance Standard 1 and 2 requirements; or

28.1.5 Is found to have substantively misrepresented a material fact or other representation in any document submitted to ITC or Detroit Edison in connection with this Program and fails within ten (10) business days of written or electronic notification from ITC or Detroit Edison to correct the misrepresentation while remaining qualified.

RETAIL ACCESS SERVICE TARIFF - continued

29. Enrollment and Service Commencement and Termination

29.1 The Marketer is responsible for all obligations and liabilities with respect to transmission services provided to its Customers until the Customers' participation in retail access service is terminated by either the Alternative Electric Supplier, Detroit Edison, or the Customer, or until the Marketer's participation in retail access is terminated by either the Marketer, ITC or Detroit Edison, or until the Marketer's relationship with an Alternative Electric Supplier is terminated by the Marketer or the Alternative Electric Supplier.

29.2 All Customer enrollment commencement and Customer enrollment termination must be performed by a qualified Alternative Electric Supplier. ITC and Detroit Edison shall have no obligations to the Marketer pursuant to this Tariff until an Alternative Electric Supplier enrolls a Customer whose services are to be provided by the Marketer.

30. Representations and Warranties

30.1 The Marketer represents and warrants to Detroit Edison/ITC that:

30.2 At all times when providing service to a Customer in conjunction with this Tariff, the Marketer will comply with all provisions of the OATT, the JOATT, this Tariff, and any other applicable federal, state, or local law, ordinance, or regulation, and any applicable administrative or judicial order.

30.3 The Marketer will not knowingly schedule generation significantly different from the expected Customer loads served.

30.4 Except as provided in section 29 of this Tariff, defaulting Party's liability shall be limited to direct actual damages only, and such direct actual damages shall be the sole and exclusive remedy and all other remedies or damages at law or in equity are waived. Neither Party shall be liable for consequential, incidental, punitive, exemplary or indirect damages, including but not limited to, lost profits or other business interruption damages, by statute, in tort or contract, under any indemnity provision, or otherwise. Limitations imposed on remedies and the measure of damages will be without regard to the cause or causes related thereto, including the negligence of any Party, whether such negligence be sole, joint or concurrent, or active or passive.

31. Dispute Resolution

31.1 ITC and Detroit Edison will have no duty or obligation to resolve any complaints or disputes between Alternative Electric Suppliers and Marketers, related to but not limited to Alternative Electric Supplier or Marketer notices, or switches or enrollment terminations.

31.2 In the event of a dispute between ITC and the Marketer of a subject matter controlled by the terms of the OATT, ITC and the Marketer shall resolve the dispute in accordance with the provisions of the OATT.

No. U-12489 dated December 20, 2001

RETAIL ACCESS SERVICE TARIFF - continued

31.3 In the event of a dispute between ITC or Detroit Edison and the Marketer, including but not limited to "Events of Default," ITC or Detroit Edison, as applicable, and the Marketer may attempt, in good faith, to resolve the dispute amicably and promptly. If the dispute is not resolved in five (5) business days, ITC or Detroit Edison, as applicable, and the Marketer shall attempt to resolve the dispute by promptly appointing a senior representative of ITC or Detroit Edison, as applicable, and the Marketer to attempt to mutually agree upon a resolution. The two senior members shall meet within ten (10) business days. If the two senior representatives cannot reach a resolution within a 30-day period, the dispute may, on demand of ITC or Detroit Edison, as applicable, or the Marketer, be submitted to arbitration as provided herein.

31.4 The dispute will be submitted for resolution in accordance with the American Arbitration Association ("AAA") Commercial Arbitration Rules. The judgment rendered by the arbitrator may be enforced in any court having jurisdiction of the subject matter and ITC or Detroit Edison, as applicable, and the Marketer.

31.5 If the parties are unable to agree on an arbitrator, the The arbitrator shall be determined by AAA.

31.6 The findings and award of the arbitrator shall be final and conclusive and shall be binding upon ITC or Detroit Edison, as applicable and the Marketer, except as otherwise provided by law. Any award shall specify the manner and extent of the division of the costs between ITC or Detroit Edison, as applicable, and the Marketer.

31.7 Nothing in this Section shall restrict the rights of either ITC or Detroit Edison, as applicable, or the Marketer to file a formal complaint with an appropriate regulatory agency regarding any issue the adjudication of which lies within the exclusive jurisdiction of the regulatory agency.

32. Bidding For Capacity Prior To 1/1/2002

Bid deposits for successful bids which remain unused through December 31, 2001 shall be returned to the bidder by February 1, 2002. No interest shall be paid on these returned deposits if returned by this date. If the bid deposit is returned after February 1, 2002, simple interest at the annual rate of 7% shall be paid from the date Detroit Edison received the deposit.

34. Optional Load Profile Management Service

The actual hourly Power consumption of Customers without Interval Demand Meters is unknown. Thus, the Marketer is not providing total load following for those Customers being supplied Power by the Marketer; Detroit Edison is providing this service. As compensation to Detroit Edison for providing generation resources to meet unmetered supply versus consumption deviations, the Marketer electing this service shall be charged a Profile Management Service Charge as set forth below.

The Load Profile Management Service Charge is \$.0046 per kWh for all kWh consumed.

RETAIL ACCESS SERVICE TARIFF - continued

34.1 Load Profiling

Retailers with Customers who do not have demand and energy hourly recording (Interval Demand) meters shall comply with the following provisions:

- (1) Interval Demand Meters shall be installed on a sample set of Customers to achieve a statistically accurate sample rate of $80\% \pm 20\%$ on an hourly basis during the on-peak hours. Such sample set of Interval Demand Meters shall be furnished, installed, maintained and owned by Detroit Edison.
- (2) The hourly meter data from the sample set meters, along with historical customer usage history, will be used by Detroit Edison to generate and maintain load leading profiles for each Marketer. Load leading profiles will be provided by Detroit Edison to the Marketer by 2:00 PM Eastern Time on the Wednesday before the start of the next week (or Tuesday if Thursday is a holiday). Detroit Edison may adjust each profile by providing notice at least one and one-half hours in advance of the effective time of the schedule change. The load leading profiles shall be used by the Marketers to schedule Power deliveries to the Point of Receipt. Scheduling for Power delivery, using the load leading profile, shall be in accordance with Rule F5.I.

34.2 Power Scheduling

If the Marketer scheduled Power in accordance with the load leading profiles provided by Detroit Edison, then no hourly Energy Imbalance penalties shall occur. If the Marketer did not schedule Power in accordance with the load leading profiles, an hourly Energy Imbalance penalty may apply. Any hourly energy imbalance penalties or charges shall be subject to the Energy Imbalance Service Schedule in the ITC's FERC Open Access Tariff.

Rate Schedule No. EC3

Optional Retail Access Backup Service

AVAILABILITY OF SERVICE: Available to a Customer or to a Marketer/Retailer as an agent for a Customer who elects to take service under Detroit Edison's Retail Access Service **Rider EC2**. A Customer which elects to take Backup Service on its own behalf shall be capable of scheduling the Backup Service. Backup Service provides a temporary alternative power resource to the Customer in the event of an outage of the Customer's generation source or in the event that transmission capacity is constrained and the Customer's generation source cannot be delivered.

Customers requesting Backup Service from the Company must contract for Backup Service in advance of utilizing the service.

HOURS OF SERVICE: 24 hours on a best efforts basis.

RATE PER MONTH:

The Company's top incremental cost of power plus 1.0¢ per kWh.

The top incremental cost of power shall be the highest cost resource or purchase inclusive of all associated transmission charges and any other applicable capacity or other costs.

LATE PAYMENT CHARGE: The Customer shall pay the Company the amount billed within 21 days following the date of mailing of the bill. A late payment charge of 2%, not compounded, of the unpaid balance, net of taxes, shall be added to any bill that is delinquent as defined by the Commission Rules.

CONTRACT TERM: Service under this tariff will continue until such time that a competitive backup market develops or firm transmission service is available to the Customer.

SCHEDULING REQUIREMENTS: The Customer must request Backup Service from the Company and is responsible for scheduling that service. Requests to the Company for Backup Service must state both the amount of backup supply and the duration.

SPECIAL TERMS AND CONDITIONS: Service under this tariff is available on a best efforts basis. The Company will make available, on a best efforts basis, supplies from its existing portfolio of generating plant and transmission access to other systems. The Company is not required to build new capacity, purchase new capacity, or interrupt non-retail access customers to provide service under this tariff.

To the extent that the Customer's supply, including Backup Supply, is insufficient or cannot be delivered, the Customer will be subject to curtailment before non-retail access customers in order to maintain system integrity. Customers who fail to curtail when ordered to do so will be either: (i) terminated from service under this tariff; or (ii) be required to permit and pay for any equipment installed by the Company necessary to permit the Company to interrupt the Customer's load.

Issued: August 24, 2001
By: L. G. Garberding
Executive Vice President
2000 Second Avenue
Detroit, Michigan 48226

Effective for bills rendered on
and after September 1, 2001 under
authority of order of the Michigan
Public Service Commission in Case
No. U-12478 dated November 2, 2000.

(To reflect reduction of energy charges due to implementation of securitization charges.)

**STANDARD CONTRACT RIDER NO. R1.1
ALTERNATIVE ELECTRIC METAL MELTING**

APPLICABLE TO:	General Service Rate	Schedule Designation D3
	Large General Service Rate	Schedule Designation D4
	Primary Supply Rate	Schedule Designation D6
	Alternative Primary Supply Rate	Schedule Designation D6.1
	Primary Space Conditioning Rate	Schedule Designation D6.2
	Interruptible Supply Rate	Schedule Designation D8

Customers operating electric furnaces for metal melting or for the reduction of metallic ores and/or electric use consumed in holding operations and taking their supply at any of the above rates and who provide special circuits so that the Company may install necessary meters, may take service under this Rider subject to Rule B2.4 - Choice of Rates.

Customers shall be subject to immediate interruption on short-term notice if necessary, in order to maintain system integrity. The customer shall be provided, whenever possible, notice in advance of probable interruption and estimated duration of interruption.

Non-Compliance Penalty: A customer who does not interrupt within one hour following a system integrity interruption order shall be billed at the rate of \$50 per kW for the highest 30-minute kW demand created during the interruption period in addition to the prescribed monthly rate.

Electric energy from any facilities, other than the Company's, except for on-site generation installed prior to January 1, 1986, will be used to first reduce the sales on this rider. Standby service will not be billed at this rider, but must be taken under Riders No. 3, No. 5 or No. 6.

RATE PER MONTH:

Energy Charge:

For service at secondary voltage level (less than 4.8 kV)

7.78c/kWh for the first 100 hours use of maximum demand

3.70c/kWh for the excess

For service at primary voltage level (4.8 kV to 13.2 kV)

6.61c/kWh for the first 100 hours use of maximum demand

2.99c/kWh for the excess

For service at subtransmission voltage level (24 kV to 41.6 kV)

6.55c/kWh for the first 100 hours use of maximum demand

2.83c/kWh for the excess

For service at transmission voltage level (120 kV and above)

6.41c/kWh for the first 100 hours use of maximum demand

2.77c/kWh for the excess

The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

M/135a

2000 Second Avenue
Detroit, Michigan 48226

Effective for bills rendered on
and after March 26, 2001 under
authority of order of the Michigan
Public Service Commission in Case
No. U-12478 dated November 2, 2000.

**STANDARD CONTRACT RIDER NO. R1.1
ALTERNATIVE ELECTRIC METAL MELTING**

APPLICABLE TO:	General Service Rate	Schedule Designation D3
	Large General Service Rate	Schedule Designation D4
	Primary Supply Rate	Schedule Designation D6
	Alternative Primary Supply Rate	Schedule Designation D6.1
	Primary Space Conditioning Rate	Schedule Designation D6.2
	Interruptible Supply Rate	Schedule Designation D8

Customers operating electric furnaces for metal melting or for the reduction of metallic ores and/or electric use consumed in holding operations and taking their supply at any of the above rates and who provide special circuits so that the Company may install necessary meters, may take service under this Rider subject to Rule B2.4 - Choice of Rates.

Customers shall be subject to immediate interruption on short-term notice if necessary, in order to maintain system integrity. The customer shall be provided, whenever possible, notice in advance of probable interruption and estimated duration of interruption.

Non-Compliance Penalty: A customer who does not interrupt within one hour following a system integrity interruption order shall be billed at the rate of \$50 per kW for the highest 30-minute kW demand created during the interruption period in addition to the prescribed monthly rate.

Electric energy from any facilities, other than the Company's, except for on-site generation installed prior to January 1, 1986, will be used to first reduce the sales on this rider. Standby service will not be billed at this rider, but must be taken under Riders No. 3, No. 5 or No. 6.

RATE PER MONTH:

Energy Charge:

For service at secondary voltage level (less than 4.8 kV)
8.15¢/kWh for the first 100 hours use of maximum demand
4.07¢/kWh for the excess

For service at primary voltage level (4.8 kV to 13.2 kV)
6.98¢/kWh for the first 100 hours use of maximum demand
3.36¢/kWh for the excess

For service at subtransmission voltage level (24 kV to 41.6 kV)
6.92¢/kWh for the first 100 hours use of maximum demand
3.20¢/kWh for the excess

For service at transmission voltage level (120 kV and above)
6.78¢/kWh for the first 100 hours use of maximum demand
3.14¢/kWh for the excess

The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on and after April 1, 1986, under authority of Order of the Michigan Public Service Commission dated April 1, 1986 in Case U-8373

STANDARD CONTRACT RIDER NO. 1.1
Alternative Electric Metal Melting

APPLICABLE TO:	General Service Rate	Schedule Designation D3
	Large General Service Rate	Schedule Designation D4
	Primary Supply Rate	Schedule Designation D6
	Bulk Power Rate	Schedule Designation D7
	Interruptible Supply Rate	Schedule Designation D8

Customers operating electric furnaces for metal melting or for the reduction of metallic ores and/or electric use consumed in holding operations and taking their supply at any of the above rates and who provide special circuits for the furnaces so that the Company may install necessary meters, may take service under this Rider subject to Rule B2.4 - Choice of Rates.

This rider is also available to customers who use electric heating as an integral part of their manufacturing process or electricity as an integral part of an anodizing, plating or coating process, and are taking their supply at either the Primary Supply Rate, Schedule Designation D6, or the Bulk Power Supply Rate, Schedule Designation D7. The customer must supply special circuits so that the Company may install the necessary meters. Service under this rider is subject to Rule B2.4 - Choice of Rates.

Customers shall be subject to immediate interruption on short-term notice if necessary, in order to maintain system integrity. The customer shall be provided whenever possible, notice in advance of probable interruption and estimated duration of interruption.

RATE PER MONTH:

Energy Charge:

For service at secondary voltage level (less than 4.8 kV)
8.49¢/kWh for the first 100 hours use of maximum demand
4.79¢/kWh for the excess

For service at primary voltage level (4.8kV to 13.2kV)
7.69¢/kWh for the first 100 hours use of maximum demand
3.99¢/kWh for the excess

For service at subtransmission voltage level (24kV to 41.6kV)
7.59¢/kWh for the first 100 hours use of maximum demand
3.94¢/kWh for the excess

For service at transmission voltage level (120 kV and above)
7.49¢/kWh for the first 100 hours use of maximum demand
3.89¢/kWh for the excess

CANCELLED BY
ORDER U-8373

APR - 1 1986

REMOVED BY HP

The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

SUBSTATION CREDIT: Available to customers served at subtransmission voltage (24kV to 41.6kV) or higher, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of 0.3¢/kWh will be applied to the energy use associated with the first 100 hours use of maximum demand.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

STANDARD CONTRACT RIDER NO. 1.1

Alternative Electric Metal Melting

APPLICABLE TO: General Service Rate	Schedule Designation D3
Large General Service Rate	Schedule Designation D4
Primary Supply Rate	Schedule Designation D6
Bulk Power Rate	Schedule Designation D7
Interruptible Supply Rate	Schedule Designation D8

Customers operating electric furnaces for metal melting or for the reduction of metallic ores and/or electric use consumed in holding operations and taking their supply at any of the above rates and who provide special circuits for the furnaces so that the Company may install necessary meters, may take service under this Rider subject to Rule B2.4 - Choice of Rates.

Customers shall be subject to immediate interruption on short-term notice if necessary, in order to maintain system integrity. The customer shall be provided whenever possible, notice in advance of probable interruption and estimated duration of interruption.

RATE PER MONTH:

Energy Charge:

For service at secondary voltage level (less than 4.8 kV)
7.8¢/kWh for the first 100 hours use of maximum demand
4.1¢/kWh for the excess

For service at primary voltage level (4.8kV to 24kV)
7.00¢/kWh for the first 100 hours use of maximum demand
3.30¢/kWh for the excess

For service at subtransmission voltage level (24 to 41.6 kV)
6.90¢/kWh for the first 100 hours use of maximum demand
3.25¢/kWh for the excess

For service at transmission voltage level (120 kV and above)
6.80¢/kWh for the first 100 hours use of maximum demand
3.20¢/kWh for the excess

The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

INTERIM SURCHARGE ADJUSTMENT: .320¢ per kWh for all kWh.

SUBSTATION CREDIT: Available to customers served at subtransmission voltage (24 to 41.6kV) or higher, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of 0.3¢/kWh will be applied to the energy use associated with the first 100 hours use of maximum demand.

FUEL ADJUSTMENT AND PURCHASED POWER ADJUSTMENT: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

(Continued From Sheet No. R1.1)

Standard Contract Rider No. 1.1 (Continued) Alternative Electric Metal Melting

SUBSTATION CREDIT: Available to customers where service at sub-transmission voltage (24 kV to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of 0.3¢/kWh will be applied to the energy use associated with the first 100 hours use of maximum demand.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: A monthly minimum charge of \$2.10 per kW of contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge will be waived if the customer over the past 12 months (including the current bill), or from the start of the contract term if less than 12 months, has averaged \$2.10 per kW per month in revenues. This minimum charge is in addition to the minimum charge under the above rates.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the normal maximum requirements of the load qualifying for service under this rider. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for this rider shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all new facilities and lines required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

TERM: This Standard Contract Rider will terminate on December 31, 2008.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the normal maximum requirements of the load qualifying for service under this rider. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for this rider shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all new facilities and lines required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

TERM: This Standard Contract Rider will terminate on December 31, 2001.

M/135b

Issued: November 1, 1999

Executive Vice President
and Chief Financial Officer
2000 Second Avenue
Detroit, Michigan 48226

Effective for service rendered on and after January 1, 2000 under authority of order of the Michigan Public Service Commission in Case U-11726 dated March 8, 1999, and Case U-11999 dated October 28, 1999

**STANDARD CONTRACT RIDER NO. R1.1
ALTERNATIVE METAL MELTING RATE—Continued**

SUBSTATION CREDIT: Available to customers where service at sub-transmission voltage (24 kV to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of 0.3¢/kWh will be applied to the energy use associated with the first 100 hours use of maximum demand.

BASE RATE REDUCTION: A credit of 2.787% applied to the base bill.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

PHASE-OUT SURCHARGE: Effective January 1, 1996, the phase-out surcharge will be 1.2¢ per kWh. This surcharge will be added to the energy charge under "RATE PER MONTH".

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: A monthly minimum charge of \$2.10 per kW of contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge will be waived if the customer over the past 12 months (including the current bill), or from the start of the contract term if less than 12 months, has averaged \$2.10 per kW per month in revenues. This minimum charge is in addition to the minimum charge under the above rates.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the normal maximum requirements of the load qualifying for service under this rider. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for this rider shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all new facilities and lines required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

TERM: This Standard Contract Rider will terminate on December 31, 1999.

STANDARD CONTRACT RIDER NO. R1.1

Alternative Metal Melting Rate - Continued

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

WHEN SERVICE IS SUPPLIED UNDER AN APPLICABLE RATE: The customer will be charged the applicable rate for the non-furnace load, plus the above rate for furnace consumption.

MINIMUM CHARGE: A monthly minimum charge of \$1.65 per kW of furnace contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge will be waived if the customer over the past 12 months (including the current bill), or from the start of the contract term if less than 12 months, has averaged \$1.65 per kW per month in revenues. This minimum charge is in addition to the minimum charge under the above rates.

FURNACE CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet their normal maximum furnace requirements, but not less than 75 kilowatts. The Company undertakes to provide the necessary facilities for a supply of electric power from its primary distribution system at the contract capacity. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The furnace contract capacity shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

(Continued From Sheet No. R1.1a)

Standard Contract Rider No. 1.1 (Continued) Alternative Electric Metal Melting

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MAXIMUM DEMAND: The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

MINIMUM CHARGE: A monthly minimum charge of \$2.10 per kW of contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge will be waived if the customer over the past 12 months (including the current bill), or from the start of the contract term if less than 12 months, has averaged \$2.10 per kW per month in revenues. This minimum charge is in addition to the minimum charge under the above rates.

POWER FACTOR CLAUSE (Retail Access Service Customers Only): *A power factor of less than 70% is not permitted and necessary corrective equipment must be installed by the Customer to correct to a minimum level of 70%. Power factor and excess Reactive Demand charges will be calculated at each Customer location at the time of the Location's single highest 30-minute integrated kW reading of the Interval Demand Meter during the on-peak hours of the billing period, which are those hours from 7 a.m. until 11 p.m. consistent with the ITC Open Access Transmission Tariff. Excess Reactive Demand is any Reactive Demand resulting from operations below 80% power factor. A monthly charge of \$3.50/kVAR will be applied to excess Reactive Demand.*

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the normal maximum requirements of the load qualifying for service under this rider. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for this rider shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all new facilities and lines required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

TERM: This Standard Contract Rider will terminate on December 31, 2005.

Customers using electric heat as an integral part of a manufacturing process, or electricity as an integral part of an anodizing, plating or coating process, and taking their supply at any of the above rates and who provide special circuits to accommodate separate metering may take service under this Rider subject to Rule B2.4 - Choice of Rates.

This Rider is available only to customers who add new load on or after May 1, 1986 to engage in the above described processes and to customers served on R1.1 prior to May 1, 1986 and engaged in the above described processes.

Customers shall be subject to immediate interruption on short-term notice if necessary, in order to maintain system integrity. The customer shall be provided, whenever possible, notice in advance of probable interruption and estimated duration of interruption.

Non-Compliance Penalty: A customer who does not interrupt within one hour following a system integrity interruption order shall be billed at the rate of \$50 per kW for the highest 30-minute kW demand created during the interruption period in addition to the prescribed monthly rate.

Electric energy from any facilities, other than the Company's, except for on-site generation installed prior to January 1, 1986, will be used to first reduce the sales on this rider. Standby service will not be billed at this rider, but must be taken under Riders No. 3, No. 5 or No. 6.

RATE PER MONTH:

Full Service Customers:

Power Supply Charges:

Energy Charges:

For service at secondary voltage level (less than 4.8 kV)

6.943¢ for the first 100 hours use of maximum demand

(Continued on Sheet No. R1.2a)

ISSUED DECEMBER 14, 2004
M.E. CHAMPLEY
SENIOR VICE PRESIDENT
REGULATORY AFFAIRS

DETROIT, MICHIGAN

Michigan Public Service
Commission

January 4, 2005

Filed JKB

EFFECTIVE FOR SERVICE RENDERED ON
AND AFTER NOVEMBER 24, 2004
UNDER AUTHORITY OF ORDER OF THE
MICHIGAN PUBLIC SERVICE COMMISSION
DATED NOVEMBER 23, 2004
IN CASE NO. U-13808

**STANDARD CONTRACT RIDER NO. R1.2
ELECTRIC PROCESS HEAT**

APPLICABLE TO:	General Service Rate	Schedule Designation D3
	Large General Service Rate	Schedule Designation D4
	Primary Supply Rate	Schedule Designation D6
	Alternative Primary Supply Rate	Schedule Designation D6.1
	Primary Space Conditioning Rate	Schedule Designation D6.2
	Interruptible Supply Rate	Schedule Designation D8

Customers using electric heat as an integral part of a manufacturing process, or electricity as an integral part of an anodizing, plating or coating process, and taking their supply at any of the above rates and who provide special circuits to accommodate separate metering may take service under this Rider subject to Rule B2.4 - Choice of Rates.

This Rider is available only to customers who add new load on or after May 1, 1986 to engage in the above described processes and to customers served on R1.1 prior to May 1, 1986 and engaged in the above described processes.

Customers shall be subject to immediate interruption on short-term notice if necessary, in order to maintain system integrity. The customer shall be provided, whenever possible, notice in advance of probable interruption and estimated duration of interruption.

Non-Compliance Penalty: A customer who does not interrupt within one hour following a system integrity interruption order shall be billed at the rate of \$50 per kW for the highest 30-minute kW demand created during the interruption period in addition to the prescribed monthly rate.

Electric energy from any facilities, other than the Company's, except for on-site generation installed prior to January 1, 1986, will be used to first reduce the sales on this rider. Standby service will not be billed at this rider, but must be taken under Riders No. 3, No. 5 or No. 6.

RATE PER MONTH: Energy Charge:

For service at secondary voltage level (less than 4.8 kV)

7.726¢/kWh for the first 100 hours use of maximum demand

3.646¢/kWh for the excess

For service at primary voltage level (4.8 kV to 13.2 kV)

6.556¢/kWh for the first 100 hours use of maximum demand

2.936¢/kWh for the excess

For service at subtransmission voltage level (24 kV to 41.6 kV)

6.496¢/kWh for the first 100 hours use of maximum demand

2.776¢/kWh for the excess

For service at transmission voltage level (120 kV and above)

6.356¢/kWh for the first 100 hours use of maximum demand

2.716¢/kWh for the excess

The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

MICHIGAN PUBLIC
SERVICE COMMISSION

MAR 19 2003

FILED JKB

Effective for bills rendered on and after March 1, 2003 under authority of order of the Michigan Public Service Commission in Case No. U-12478 dated February 5, 2003.

(To reflect reduction of energy charges due to implementation of revised securitization charges)

**STANDARD CONTRACT RIDER NO. R1.2
ELECTRIC PROCESS HEAT**

APPLICABLE TO:	General Service Rate	Schedule Designation D3
	Large General Service Rate	Schedule Designation D4
	Primary Supply Rate	Schedule Designation D6
	Alternative Primary Supply Rate	Schedule Designation D6.1
	Primary Space Conditioning Rate	Schedule Designation D6.2
	Interruptible Supply Rate	Schedule Designation D8

Customers using electric heat as an integral part of a manufacturing process, or electricity as an integral part of an anodizing, plating or coating process, and taking their supply at any of the above rates and who provide special circuits to accommodate separate metering may take service under this Rider subject to Rule B2.4 - Choice of Rates.

This Rider is available only to customers who add new load on or after May 1, 1986 to engage in the above described processes and to customers served on R1.1 prior to May 1, 1986 and engaged in the above described processes.

Customers shall be subject to immediate interruption on short-term notice if necessary, in order to maintain system integrity. The customer shall be provided, whenever possible, notice in advance of probable interruption and estimated duration of interruption.

Non-Compliance Penalty: A customer who does not interrupt within one hour following a system integrity interruption order shall be billed at the rate of \$50 per kW for the highest 30-minute kW demand created during the interruption period in addition to the prescribed monthly rate.

Electric energy from any facilities, other than the Company's, except for on-site generation installed prior to January 1, 1986, will be used to first reduce the sales on this rider. Standby service will not be billed at this rider, but must be taken under Riders No. 3, No. 5 or No. 6.

RATE PER MONTH: Energy Charge:

For service at secondary voltage level (less than 4.8 kV)

7.661¢/kWh for the first 100 hours use of maximum demand

3.581¢/kWh for the excess

For service at primary voltage level (4.8 kV to 13.2 kV)

6.491¢/kWh for the first 100 hours use of maximum demand

2.871¢/kWh for the excess

For service at subtransmission voltage level (24 kV to 41.6 kV)

6.431¢/kWh for the first 100 hours use of maximum demand

2.711¢/kWh for the excess

For service at transmission voltage level (120 kV and above)

6.291¢/kWh for the first 100 hours use of maximum demand

2.651¢/kWh for the excess

The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

For service at secondary voltage level (less than 4.8 kV)
8.05¢/kWh for the first 100 hours use of maximum demand
4.50¢/kWh for the excess

For service at primary voltage level (4.8 kV to 13.2 kV)
7.05¢/kWh for the first 100 hours use of maximum demand
3.68¢/kWh for the excess

For service at subtransmission voltage level (24 kV to 41.6 kV)
6.96¢/kWh for the first 100 hours use of maximum demand
3.66¢/kWh for the excess

For service at transmission voltage level (120 kV and above)
6.84¢/kWh for the first 100 hours use of maximum demand
3.59¢/kWh for the excess

The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

NUCLEAR DECOMMISSIONING SURCHARGE: .00660¢ per kWh for all kWh.

SUBSTATION CREDIT: Available to customers served at subtransmission voltage (24 kV to 41.6 kV) or higher, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of 0.3¢/kWh will be applied to the energy use associated with the first 100 hours use of maximum demand.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGE AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

M/135c

Issued: January 1, 1989
By: E. L. Grove, Jr.
Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective for service rendered on and after January 1, 1989, under authority of order of the Michigan Public Service Commission dated December 27, 1988 in Case U-8789.

STANDARD CONTRACT RIDER NO. R1.2

ELECTRIC PROCESS HEAT

APPLICABLE TO:	General Service Rate	Schedule Designation D3
	Large General Service Rate	Schedule Designation D4
	Primary Supply Rate	Schedule Designation D6
	Alternative Primary Supply Rate	Schedule Designation D6.1
	Primary Space Conditioning Rate	Schedule Designation D6.2
	Bulk Power Rate	Schedule Designation D7
	Interruptible Supply Rate	Schedule Designation D8

Customers using electric heat as an integral part of a manufacturing process, or electricity as an integral part of an anodizing, plating or coating process and are taking their supply at any of the above rates and who provide special circuits to accommodate separate metering may take service under this Rider subject to Rule B2.4 - Choice of Rates.

This Rider is available only to customers who add new load on or after May 1, 1986 to engage in the above described processes and to customers served on R1.1 prior to May 1, 1986 and are engaged in the above described processes.

Customers shall be subject to immediate interruption on short-term notice if necessary, in order to maintain system integrity. The customer shall be provided whenever possible, notice in advance of probable interruption and estimated duration of interruption.

Electric energy from any facilities, other than the Company's, except for on-site generation installed prior to January 1, 1986, will be used to first reduce the sales on this rider. Standby service will not be billed at this rider, but must be taken under Riders No. 3, No. 5 or No. 6.

RATE PER MONTH:

Energy Charge:

For service at secondary voltage level (less than 4.8 kV)
8.63¢/kWh for the first 100 hours use of maximum demand
4.89¢/kWh for the excess

For service at primary voltage level (4.8 kV to 13.2 kV)
7.82¢/kWh for the first 100 hours use of maximum demand
4.09¢/kWh for the excess

For service at subtransmission voltage level (24 kV to 41.6 kV)
7.72¢/kWh for the first 100 hours use of maximum demand
4.03¢/kWh for the excess

For service at transmission voltage level (120 kV and above)
7.61¢/kWh for the first 100 hours use of maximum demand
3.99¢/kWh for the excess

The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

NUCLEAR DECOMMISSIONING SURCHARGE: .00660¢ per kWh for all kWh.

1986 TAX REFORM ACT SURCHARGE: -.110¢ per kWh for all kWh.

SUBSTATION CREDIT: Available to customers served at subtransmission voltage (24 kV to 41.6 kV) or higher, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of 0.3¢/kWh will be applied to the energy use associated with the first 100 hours use of maximum demand.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGE AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on and after April 1, 1986, under authority of Order of the Michigan Public Service Commission dated April 1, 1986 in Case U-8374

(Continued From Sheet No. R1.2)

Standard Contract Rider No. 1.2 (Continued)

Electric Process Heat

SUBSTATION CREDIT: Available to customers where service at sub-transmission voltage (24 kV to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of 0.3¢/kWh will be applied to the energy use associated with the first 100 hours use of maximum demand.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: A monthly minimum charge of \$2.10 per kW of contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge will be waived if the customer over the past 12 months (including the current bill), or from the start of the contract term if less than 12 months, has averaged \$2.10 per kW per month in revenues. This minimum charge is in addition to the minimum charge under the above rates.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the normal maximum requirements of the load qualifying for service under this rider. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for this rider shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all new facilities and lines required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

TERM: This Standard Contract Rider will terminate on December 31, 2008.

This minimum charge is in addition to the minimum charge under the above rates.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the normal maximum requirements of the load qualifying for service under this rider. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for this rider shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all new facilities and lines required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

TERM: This Standard Contract Rider will terminate on December 31, 2001.

M/135d

CANCELLED BY ORDER IN CASE NO. U- 12478 FEB 06 2002 REMOVED BY <i>Cj</i>
--

Issued: April 6, 2001
By: L. G. Garberding
Executive Vice President
and Chief Financial Officer
2000 Second Avenue
Detroit, Michigan 48226

Effective for service rendered on and after April 14, 2001 under authority of order of the Michigan Public Service Commission in Case No. U-12478 dated November 2, 2001.

**STANDARD CONTRACT RIDER NO. R1.2
ELECTRIC PROCESS HEAT—Continued**

SUBSTATION CREDIT: Available to customers where service at sub-transmission voltage (24 kV to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of 0.3¢/kWh will be applied to the energy use associated with the first 100 hours use of maximum demand.

BASE RATE REDUCTION: A credit of 3.227% applied to the base bill.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

PHASE-OUT SURCHARGE: The following surcharge added to the energy charge under "RATE PER MONTH":

- A. 1.2¢ per kWh effective January 1, 1996
- B. 1.4¢ per kWh effective January 1, 2000
- C. 1.5¢ per kWh effective January 1, 2001

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: A monthly minimum charge of \$2.10 per kW of contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge will be waived if the customer over the past 12 months (including the current bill), or from the start of the contract term if less than 12 months, has averaged \$2.10 per kW per month in revenues. This minimum charge is in addition to the minimum charge under the above rates.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the normal maximum requirements of the load qualifying for service under this rider. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for this rider shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all new facilities and lines required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

TERM: This Standard Contract Rider will terminate on December 31, 2001.

(Continued From Sheet No. R1.2a)

Standard Contract Rider No. 1.2 (Continued)

Electric Process Heat

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MAXIMUM DEMAND: The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

MINIMUM CHARGE: A monthly minimum charge of \$2.10 per kW of contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge will be waived if the customer over the past 12 months (including the current bill), or from the start of the contract term if less than 12 months, has averaged \$2.10 per kW per month in revenues. This minimum charge is in addition to the minimum charge under the above rates.

POWER FACTOR CLAUSE (Retail Access Service Customers Only): *A power factor of less than 70% is not permitted and necessary corrective equipment must be installed by the Customer to correct to a minimum level of 70%. Power factor and excess Reactive Demand charges will be calculated at each Customer location at the time of the Location's single highest 30-minute integrated kW reading of the Interval Demand Meter during the on-peak hours of the billing period, which are those hours from 7 a.m. until 11 p.m. consistent with the ITC Open Access Transmission Tariff. Excess Reactive Demand is any Reactive Demand resulting from operations below 80% power factor. A monthly charge of \$3.50/kVAR will be applied to excess Reactive Demand.*

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the normal maximum requirements of the load qualifying for service under this rider. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for this rider shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all new facilities and lines required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

TERM: This Standard Contract Rider will terminate on December 31, 2005.

Michigan Public Service
Commission

January 31, 2006

Filed RL

ISSUED JANUARY 23, 2006
M.E. CHAMPLEY
SENIOR VICE PRESIDENT
REGULATORY AFFAIRS

DETROIT, MICHIGAN

EFFECTIVE FOR BILLS RENDERED ON
AND AFTER FEBRUARY 1, 2006
UNDER AUTHORITY OF ORDER OF THE
MICHIGAN PUBLIC SERVICE COMMISSION
DATED DECEMBER 22, 2005
IN CASE NO. U-14399

STANDARD CONTRACT RIDER NO. 2
SPECIAL PURPOSE FACILITIES

APPLICABLE TO: All Filed Rates.

The Company is, from time-to-time, required to install special facilities to accommodate extraordinary requirements of the customers. This results in investment in facilities that are provided for the exclusive use of the specific customer and not available to the Company for general revenue purposes. Inasmuch as such installations do not provide the proportionality of revenue to investment available in the general case, the service supplied will be subject to the following conditions:

Where the customer requests:

1. A second source of power to supply redundant service.* The second source of power to customers served from the overhead distribution system will normally be supplied from the underground distribution system.
2. Special facilities for uses, which in the opinion of the Company, will be disturbing to the normally accepted quality of commercial power.
3. Oversized equipment.
4. Special facilities not otherwise covered under B3.3.

The special or additional facilities can be provided under two options.

Option I:

1. Advance:

Prior to construction the customer will advance to the Company the total amount of the estimated construction costs.

2. Refund:

- (a) The Company will refund to the customer 40% of the annual revenue for each of the first five years of metered use. The refund, without interest, will be made one month after each full year of service. There will be no refunds for a second source of service supply or oversized equipment.
- (b) The customer will be entitled to an additional refund if there is additional utilization of the equipment by others within the first five years of service. The refund will be based on the additional revenue received, the portion of equipment utilized, and the time remaining to refund the original advance.

(Continued on next sheet)

*Where Company policy prescribes two-line service, provisions of this rider will not apply.

Public Service Commission dated
July 21, 1981 in Case U-6488.

STANDARD CONTRACT RIDER NO. 2-Continued
SPECIAL PURPOSE FACILITIES

(c) The refund cannot exceed the advance under any condition.

3. Service Charge:

There will be a monthly charge, upon the beginning of service, equal to one-half of one percent of the advance less any refund. This charge is required to cover property taxes, insurance and maintenance and is applicable as long as the service is used.

Option II:

1. Financing:

As an alternative to the customer advancing the total amount of the estimated construction costs, the Company may finance the special or additional facilities. There would be a monthly service charge (or in special cases a minimum charge, the application of which would be determined by the Company) of 1 1/2% of the investment in the special or additional facilities.

2. Adjustment:

- (a) At the end of each year during the first five years the investment base will be reduced by 40% of the annual revenue from the metered use—with an adjustment in the service charge. There will be no reduction in investment base or adjustment to the service charge for a second source of service supply or oversize equipment.
- (b) If there is additional utilization by others of the lines or equipment during the first five years, there will be an adjustment to the investment base and service charge based on the prorata capacity used by others.

CONTRACT TERM: The rate for service is revised by this rider modifying the contract form prescribed for one of the applicable filed rates. The contract term as to special charge is for a five year period extending thereafter from month-to-month until terminated by mutual consent or by thirty days' notice by either party, which may be given any time after the end of the fifth year.

Issued: July 21, 1981
By: E. L. Grove, Jr.
Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on and after July 23, 1981 under authority of Order of the Michigan Public Service Commission dated July 21, 1981 in Case U-6488.

STANDARD CONTRACT RIDER NO. 2-Continued
SPECIAL PURPOSE FACILITIES

(c) The refund cannot exceed the advance under any condition.

3. Service Charge:

There will be a monthly charge, upon the beginning of service, equal to one-half of one percent of the advance less any refund. This charge is required to cover property taxes, insurance and maintenance and is applicable as long as the service is used.

Option II:

1. Financing:

As an alternative to the customer advancing the total amount of the estimated construction costs, the Company may finance the special or additional facilities. There would be a monthly service charge (or in special cases a minimum charge, the application of which would be determined by the Company) of 1 1/2% of the investment in the special or additional facilities.

2. Adjustment:

- (a) At the end of each year during the first five years the investment base will be reduced by 40% of the annual revenue from the metered use with an adjustment in the service charge. There will be no reduction in investment base or adjustment to the service charge for a second source of service supply or oversize equipment.
- (b) If there is additional utilization by others of the lines or equipment during the first five years, there will be an adjustment to the investment base and service charge based on the prorata capacity used by others.

CONTRACT TERM: The rate for service is revised by this rider modifying the contract form prescribed for one of the applicable filed rates. The contract term as to special charge is for a five year period extending thereafter from month-to-month until terminated by mutual consent or by thirty days' notice by either party, which may be given any time after the end of the fifth year.

STANDBY SERVICE: Customers who desire the Company to serve **the power supply requirements of** load that is normally served by the customer's generator or prime mover must take standby service under the provisions of this rider **unless otherwise exempted by order of the Michigan Public Service Commission** and must take supplemental service on one of the applicable filed rates listed above. Customers who desire to run electrical generating equipment in parallel with the Company's system must have written permission by the company for parallel operation.

Customers purchasing their entire energy requirements from the Company with generators or prime movers installed for use only in emergency will not be considered as taking standby service.

All customers **taking service under this rider** must install the necessary equipment to permit metering. The Company will supply the metering equipment.

PARALLEL OPERATION: The customer must meet the interconnection requirements of Detroit Edison specified in "**The Michigan Electric Utility Generator Interconnection Requirements**" as approved by the Michigan Public Service Commission, **and must enter into an Interconnection and Operating Agreement with the Company** before parallel operation will be permitted. Operating in parallel with the Company's system without written approval by the Company of the interconnection and any subsequent changes to the interconnection will make the customer subject to disconnection.

Except for the acts or omissions of the Company's employees or agents which occur on the Customer's side of the point of interconnection the customer shall indemnify, defend and hold the Company and its officers, agents and employees harmless from any liabilities, claims, losses, demands, costs, damages or damage which (i) occur on the Customer's side of the point of interconnection resulting from the installation, maintenance, possession or operation of the Facility, or (ii) occur on the Company's side of the point of interconnection up to the first point of the Company's General Facility Protection if at the time of the injury or damage, the Company is not providing electric energy to the customer and the injury or damage was caused by the customer's intentional defeat of the protective relays.

The Company shall indemnify, defend and hold the Customer and its officers, agents and employees harmless from any liabilities, claims, losses, demands, costs, damages or judgments, including reasonable attorneys' fees, arising out of all personal injuries or property damages which occur on the Company's side of the point of interconnection resulting from the installation, maintenance, possession or operation of the Company's General Facilities; (i) except for the acts or omissions of the Customer's employees or agents which occur on the Company's side of the point of interconnection; and (ii) except for those injuries or damages for which the Customer is to indemnify the Company pursuant to the preceding paragraph.

STANDBY SERVICE: Customers who desire to run electrical generating equipment in parallel with the Company's system or customers who desire the Company to serve load that is normally served by the customer's generator or prime mover must take standby service under the provisions of this rider and must take supplemental service on one of the applicable filed rates listed above. Customers who desire to run electrical generating equipment in parallel with the Company's system must have written permission by the company for parallel operation.

Any customer operating in parallel with the Company's system under written permission by the Company but not taking service under Rider No. 3 as of January 1, 1989, will not be required to take service under Rider No. 3 as long as there is no change in the customer's generating facilities or other source of energy.

Customers purchasing their entire energy requirements from the Company with generators or prime movers installed for use only in emergency will not be considered as taking standby service.

The effective date for service under this rider will be the first full billing cycle for each customer which begins on or after July 1, 1989. All customers operating in parallel with the Company's system must install the necessary equipment to permit metering by July 1, 1989. The Company will supply the metering equipment. Parallel operation without metering will not be permitted after July 1, 1989, except by written permission of the Company.

PARALLEL OPERATION: The customer must meet the interconnection requirements of Detroit Edison specified in "Protective Relaying Operating and Telemetering Guidelines for Independently-Owned Generation," published by the Company, as approved by the Michigan Public Service Commission, before parallel operation will be permitted. The Company must approve in writing any subsequent changes in the interconnection configuration before such changes are allowed. Operating in parallel with the Company's system without written approval by the Company of the interconnection and any subsequent changes to the interconnection will make the customer subject to disconnection.

Except for the acts or omissions of the Company's employees or agents which occur on the Customer's side of the point of interconnection the customer shall indemnify, defend and hold the Company and its officers, agents and employees harmless from any liabilities, claims, losses, demands, costs, damages or damage which (i) occur on the Customer's side of the point of

	Secondary Pumping	Schedule Designation E5

STANDBY SERVICE: Customers who desire to run electrical generating equipment in parallel with the Company's system or customers who desire the Company to serve load that is normally served by another source of energy or by the customer's generator or prime mover must have written permission by the Company for parallel operation and must take standby service under the provisions of this rider and must take supplemental service on one of the applicable filed rates listed above.

Any customer operating in parallel with the Company's system under written permission by the Company but not taking service under Rider No. 3 as of the January 1, 1989, will not be required to take service under Rider No. 3 as long as there is no change in the customer's generating facilities or other source of energy.

Customers purchasing their entire energy requirements from the Company with generators or prime movers installed for use only in emergency will not be considered as taking standby service.

The effective date for service under this rider will be first full billing cycle for each customer which begins on or after July 1, 1989. All customers operating in parallel with the Company's system must install the necessary equipment to permit metering by July 1, 1989. The Company will supply the metering equipment. Parallel operation without metering will not be permitted after July 1, 1989, except by written permission of the Company.

PARALLEL OPERATION: The customer must meet the interconnection requirements of Detroit Edison specified in "Protective Relaying Operating and Telemetering Guidelines for Independently-Owned Generation", published by the Company, as approved by the Michigan Public Service Commission, before parallel operation will be permitted. On or before March 30, 1989, the Company will petition the Michigan Public Service Commission for this approval. The Company must approve in writing any subsequent changes in the interconnection configuration before such changes are allowed. Operating in parallel with the Company's system without written approval by the Company of the interconnection and any subsequent changes to the interconnection will make the customer subject to disconnection. The Company will respond to requests for interconnection, granting or denying, within 20 working days of the receipt of the request provided that the request conforms to the Company's interconnection requirements as specified.

STANDBY OR PARTIAL SERVICE

APPLICABLE TO:

General Service Rate
Large General Service Rate
Primary Supply Rate
Bulk Power Supply Rate

Schedule Designation D3
Schedule Designation D4
Schedule Designation D6
Schedule Designation D7

Customers having another source of power for their entire load, or any part thereof, and desiring standby service must take service on one of the applicable filed rates listed above. Parallel operation of private electric generation is not permitted except by written permission of the Company.

For customers desiring partial service which will be separately metered and not served by another source of power, the service charges set forth below shall not apply and service will be supplied at any applicable filed rate.

STANDBY SERVICE: Where the customer generates all or any part of his total requirements, standby service will be provided for all or any part of the load served by the customer's generator or prime mover. Customers purchasing their entire energy requirements from the Company with generators or prime movers installed for use only in emergency will not be considered as taking standby service.

PARTIAL SERVICE: Where the customer generates a part of his total requirements, partial service will be provided for the part of the load permanently connected to the Company's service where it is not possible to connect such load to the customer's generator or prime mover.

STANDBY CAPACITY: The standby capacity in kilowatts shall be initially established by mutual agreement for electrical capacity sufficient to meet the maximum standby requirements which the Company is expected to supply. The rating in kilowatts of the largest generator or prime mover in service will be considered in establishing the amount of standby capacity required. Whenever the standby capacity so established is exceeded by the creation of a greater actual maximum demand, excluding firm load regularly supplied by the Company, then such greater demand becomes the new standby capacity.

RATE: At the primary rate, a service charge of \$2.20 per month per kilowatt of standby capacity, in addition to the charges for electric service taken under the rate schedule.

At the secondary rate, a service charge of \$2.40 per month per kilowatt of standby capacity, in addition to the charges for electric service taken under the rate schedule.

**STANDARD CONTRACT RIDER NO. 3
PARALLEL OPERATION AND STANDBY SERVICE**

interconnection resulting from the installation, maintenance, possession or operation of the Facility, or (i i) occur on the Company's side of the point of interconnection up to the first point of the Company's General Facility Protection if at the time of the injury or damage, the Company is not providing electric energy to the customer and the injury or damage was caused by the customer's intentional defeat of the protective relays.

The Company shall indemnify, defend and hold the Customer and its officers, agents and employees harmless from any liabilities, claims, losses, demands, costs, damages or judgments, including reasonable attorneys' fees, arising out of all personal injuries or property damages which occur on the Company's side of the point of interconnection resulting from the installation, maintenance, possession or operation of the Company's General Facilities; (i) except for the acts or omissions of the Customer's employees or agents which occur on the Company's side of the point of interconnection; and (i i) except for those injuries or damages for which the Customer is to indemnify the Company pursuant to the preceding paragraph.

The Customer shall maintain and furnish current evidence of comprehensive general liability insurance in the amount of \$2,000,000 per occurrence. This insurance can be a combination of primary and excess insurance. The Company shall be named as an additional insured under the customer's policy. The customer need not provide insurance if it can demonstrate that its current assets exceed current liabilities by \$7,500,000 or more. If the customer fails to provide insurance or does not meet the requirements of the preceding sentence for waiver of insurance, then the Company will purchase insurance in the amount of \$2,000,000 to protect the Company (but not the customer). The cost of such insurance will be paid by the customer. The customer's insurance, its waiver, or insurance purchased by the Company shall not limit the Customer's indemnity obligations. Parallel operation will not be permitted (or will be terminated) if the Customer fails to provide insurance, meet the waiver requirements or pay the cost of insurance obtained by the Company.

STANDBY CONTRACT CAPACITY: Standby contract capacity in kW will be established for electric capacity sufficient to meet the customer's standby load according to the following method.

- (a) If the customer's generating unit has a least 5000 hours of metered operation with output greater than zero kW over the latest 12-month period, then the standby contract capacity for the next 12 months will be set at the 1001st highest hourly kW output.

At the customer's option, the standby contract capacity for June through October will be set at the 501st highest hourly kW output during the months of June through October and the standby contract capacity for November through May will be set at the 501st hourly kW output during the months of November through May. A customer may not later choose the 1001-hour determination above, unless with the Company's permission for permanent changes in the customer's facilities.

For multiple generating units, "output" means the simultaneous output of all units.

STANDARD CONTRACT RIDER NO. 3
PARALLEL OPERATION AND STANDBY SERVICE

The customer shall be liable for any damage or injuries attributable to or resulting from the installation, maintenance, possession, or operation of the customer's generating facilities.

The following indemnification and insurance requirements, which will be subject to challenge in the case to be filed by the Company on the issue of interconnection guidelines, shall apply unless modified in said case.

The customer will indemnify, defend, and hold the Company and its officers, agents, and employees harmless from any and all liability, claims, demands, costs, judgments, loss, or damage, including attorney fees, resulting from the installation, maintenance, possession, or operation of the customer's generating facilities, except those caused by the sole negligence of the Company. The customer's indemnification shall not include damages and injuries occurring on the Company's system that is used to serve other customers ("General Facilities") unless the damage or injuries on the General Facilities would not have occurred but for the operation of the customer's generating facilities or is caused by the sole negligence of the customer.

The Company shall indemnify, defend, and hold the Customer and its officers, agents, and employees harmless from any liability, claims, loss, and demands, costs, damage, or judgments, including attorney fees, resulting from damage or injuries occurring on the Company's General Facilities unless the damage or injuries on the General Facilities would not have occurred but for the operation of the customer's generating facilities or is caused by the sole negligence of the customer.

Without limiting the customer's indemnity obligation, the customer shall maintain and furnish to the Company current evidence of liability insurance in the amount of \$2,000,000. The Company shall be named as an additional insured under such policy.

STANDBY CONTRACT CAPACITY: Standby contract capacity in kW will be established for electric capacity sufficient to meet the customer's standby load according to the following method.

- (a) If the customer's generating unit has at least 5000 hours of metered operation with output greater than zero kW over the latest 12-month period, then the standby contract capacity for the next 12 months will be set at the 1001st highest hourly kW output.

Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on and after January 1, 1989, under authority of Order of the Michigan Public Service Commission dated December 27, 1988 in Case U-8789.

STANDARD CONTRACT RIDER NO. 3
STANDBY OR PARTIAL SERVICE-Continued

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: The service charge as above, in addition to the minimum charge for any electric service taken on the applicable filed rate.

CONTRACT TERM: The customer may take service at any applicable filed rate listed above but will be required to pay the service charge for standby service, in addition to the charges for electric service taken under the rate schedule. This rate is made effective by a rider modifying the contract form prescribed for one of the applicable filed rates listed above. The contract terms as to service charge is for a five-year period extending thereafter from month-to-month until terminated by mutual consent, or by thirty days written notice by either party. No customer shall be permitted to effect a reduction in the standby capacity so established by requesting a new contract for the same service unless there has been a bona fide reduction in connected load.

SPECIAL TERMS AND CONDITIONS: Whenever the Company supplies the customer's total requirements or any part of the customer's load normally supplied by the customer's generator because the generator is inoperative, the billing demand and/or maximum demand for that month on the regular rate will be excluded from the calculation used to compute subsequent billing demands and/or maximum demands, under the ratchet provision.

REMOVED BY <u>480</u>

Issued: July 21, 1981
By: E. L. Grove, Jr.
Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on and after July 23, 1981 under authority of Order of the Michigan Public Service Commission dated July 21, 1981 in Case U-6488.

STANDARD CONTRACT RIDER NO. 3
PARALLEL OPERATION AND STANDBY SERVICE

- (b) If the customer's generating unit does not have at least 5000 hours of metered operation with output greater than zero kW over the latest 12-month period, then the standby contract capacity will be set at the generator's nameplate rating for one year, after which time paragraph (a) above will apply if the generator's output has been greater than zero for at least 5000 hours. If not, then the standby contract capacity will continue at nameplate rating for the next 12-month period. Where multiple nameplate ratings are specified, the rating at 60 degrees Fahrenheit will be used.
- (c) For customers demonstrating unusual operating conditions, including but not limited to generation greater than the customer's own load, standby contract capacity may be set by mutual agreement of the Company and the customer.
- (d) For generators which do not operate during the months of November through May, standby contract capacity will be set at zero for November through May and will be set at the nameplate rating for June through October.
- (e) The standby contract capacity shall not be decreased over the life of the contract, except by mutual agreement of the Company and the customer for permanent changes in a customer's facilities and except as provided for in paragraph (f) below. Such a reduction in standby contract capacity will not be allowed more than once per year.
- (f) The standby contract capacity will be adjusted on an annual basis according to paragraphs (a) and (b) above.
- (g) For customers with multiple generating units which do not have 5000 hours of metered operation with simultaneous output greater than zero over the latest 12-month period, the standby contract capacity may be set by mutual agreement of the Company and the customer for one year.
- (h) For the first time only that a customer takes service under this rider, if the customer has not previously operated in parallel with the Company's system and if the customer's generating unit does not have at least 5000 hours of metered operation with output greater than zero over the latest 12-month period, then the standby contract capacity will be set at zero kW for 30 days, after which paragraph (b) above will apply.

SUPPLEMENTAL POWER: Supplemental power is electric energy and capacity provided by Detroit Edison to serve the customer's total internal load which is in addition to that portion of the customer's total internal load equal to the standby contract capacity. For each point of service, total internal load equals the output of the customer's generation plus the power supplied by the Company. Supplemental demand equals total internal load less standby contract capacity, but not less than zero. Supplemental power will be billed under the applicable rate schedule for supplemental service ("supplemental rate schedule").

METERING REQUIREMENTS: The output of customer generation or, if appropriate, the load served by another source of power or the customer's prime mover will be metered by Detroit Edison. For customers served on supplemental rate schedules D3, D3.3, D4, and E5, the entire load served by the Company will be metered with demand-recording equipment.

DATE 02-01-06

Issued: January 1
By: E. L. Grove,
Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on
and after January 1, 1989, under
authority of Order of the Michigan
Public Service Commission dated
December 27, 1988 in Case U-8789.

(Continued From **Sheet No. R3b**)

Standard Contract Rider No. 3 (Cont'd) Parallel Operation and Standby Service

Energy Charge:

An energy charge for back-up and maintenance power will be charged based on standby contract capacity less the output of the customer's generator, but not less than zero. For customers served on supplemental rate schedules D4, D6, D6.1, D7 and D8, the energy charge will be the D6 on-peak energy charge, 2.364¢ per kWh, plus appropriate credits and surcharges, including but not limited to off-peak credit, voltage level credit, and substation credit. For customers served on supplemental rate schedules D3, D3.3, and E5, the energy charge will be the applicable energy charge plus surcharges less a credit per kWh equal to the non-generation fixed charge per kW, \$3.80, divided by 500, applied to the first 500 hours use of standby contract capacity per month for back-up or maintenance power. The energy as stated herein, is also subject to the provision of schedule designation B-4.6 PSCL clause.

Waivers and limits for demand/energy rates:

For customers served on supplemental rates schedules D4, D6, D6.1 and D8, the following applies.

If the total of daily demand charges for the month is less than the monthly generation reservation fee, then the daily demand charges will be waived for that month.

If the total of daily demand charges for the month is greater than the monthly generation reservation fee, then the generation reservation fee will be waived for that month.

If the total of daily demand charges for the month is greater than the D6 on-peak billing demand charge times the standby contract capacity plus the difference between the product of the D6 maximum demand charge times the standby contract capacity and the standby distribution charges, then the customer will pay the D6 on-peak billing demand charge times the standby contract capacity plus the above difference. For customers on supplemental rate schedule D4, the above difference will be set to zero.

Waivers and limits for energy-only rates:

For customers served on supplemental rates schedules D3, D3.3, and E5, the following applies.

If the total of daily demand charges for the month is less than the monthly generation reservation fee, then the daily demand charges will be waived for that month.

If the total of daily demand charges for the month is greater than the monthly generation reservation fee, then the daily demand charges will be waived for that month provided that the supplemental rate continues as an energy-only rate. If not, then paragraphs (6)(b) and (6)(c) above will apply.

Power Supply Pricing Option:

This option is available to customers desiring to have power supply standby energy service priced on the basis of the real time MISO locational hourly marginal energy price for the Detroit Edison appropriate load node. Standby energy service is limited to unforeseen generator outages, deviations from standby contract capacity and maintenance. In addition to the MISO locational hourly marginal energy price the following charges will also apply:

0.55¢/kWh for MISO network transmission costs and MISO energy market costs plus,

An administrative charge of 0.20¢/kWh plus,

A voltage level service adder of 1% for transmission, 2% for subtransmission, 7% for primary, and 12% for secondary.

This option will continue until the latter of March 31, 2008 or twelve months from the date of filing of the general electric rate case ordered by the Commission in MPSC Case No. U-14399.

IN CASE NO. U-14399

(Continued From Sheet No. R3b)

Standard Contract Rider No. 3 (Cont'd) Parallel Operation and Standby Service

Rates:

- (1) Service Charge:
\$210.00 per customer per month for customers served at primary voltages and above.
\$ 70.00 per customer per month for customers served at secondary voltages.
- (2) Monthly Generation Reservation Fee:
\$0.63 times the standby contract capacity in kW, per month.
- (3) Non-Generation Charge:
Monthly non-generation fixed charges per kW of standby contract capacity will be as follows. For standby contract capacity set according to paragraph (d) of the "Standby Contract Capacity" section above, the charge for all months will be based on the standby contract capacity specified for June through October.
 - (a) \$1.51 per kW at transmission voltage
 - (b) \$2.36 per kW at subtransmission voltage
 - (c) \$3.25 per kW at primary voltage
 - (d) \$3.80 per kW at secondary voltage
- (4) Demand Charge:
 - (a) A daily on-peak demand charge for back-up or maintenance demand will be charged based on the determination of supplemental and back-up or maintenance power coincident with the daily highest 30-minute integrated reading during on-peak hours of the demand meter which measures the total load served by Detroit Edison.
 - (b) The daily on-peak demand charge for back-up power is \$0.66 per kW per day. Back-up demand equals standby contract capacity minus the 30-minute output of the customer's generator, but not less than zero, and not greater than the total load served by the Company, measured during periods other than maintenance periods as defined below. If the customer's total internal load is less than or equal to the output of the generator, then back-up demand will be zero for that day.
 - (c) The daily on-peak demand charge for maintenance power is \$0.36 per kW per day. Maintenance demand equals standby contract capacity minus the 30-minute output of the customer's generator, but not less than zero, and not greater than the total load served by the Company, during maintenance periods as defined below. If the customer's total internal load is less than or equal to the output of the generator, then maintenance demand will be zero for that day.
- (5) Energy Charge:
An energy charge for back-up and maintenance power will be charged based on standby contract capacity less the output of the customer's generator, but not less than zero. For customers served on supplemental rate schedules D4, D6, D6.1, D7, D8, and E4, the energy charge will be the D6 on-peak energy charge, 2.431¢ per kWh, plus appropriate credits and surcharges, including but not limited to off-peak credit, voltage level credit, and substation credit. For customers served on supplemental rate schedules D3, D3.3, and E5, the energy charge will be the applicable energy charge plus surcharges less a credit per kWh equal to the non-generation fixed charge per kW, \$3.80, divided by 500, applied to the first 500 hours use of standby contract capacity per month for back-up or maintenance power. The energy as stated herein, is also subject to the provision of schedule designation B-4.6 PSCR clause.

Maintenance demand equals standby contract capacity minus the 30-minute output of the customer's generator, but not less than zero, and not greater than the total load served by the Company, during maintenance periods as defined below. If the customer's total internal load is less than or equal to the output of the generator, then maintenance demand will be zero for that day.
- (5) Energy Charge:
 An energy charge for back-up and maintenance power will be charged based on standby contract capacity less the output of the customer's generator, but not less than zero. For customers served on supplemental rate schedules D4, D6, D6.1, D8, and E4, the energy charge will be the D6 on-peak energy charge, 2.49¢ per kWh, plus appropriate credits and surcharges, including but not limited to off-peak credit, voltage level credit, and substation credit. For customers served on supplemental rate schedules D3, D3.3, and E5, the energy charge will be the applicable energy charge plus surcharges less a credit per kWh equal to the non-generation fixed charge per kW, \$3.80, divided by 500, applied to the first 500 hours use of standby contract capacity per month for back-up or maintenance power. The energy as stated herein, is also subject to the provision of schedule designation B-4.6 PSCR clause.

(To reflect reduction of energy charges due to implementation of securitization charges.)

STANDARD CONTRACT RIDER NO. 3
PARALLEL OPERATION AND STANDBY SERVICE

Rates:

- (1) Service Charge:
\$210.00 per customer per month for customers served at primary voltages and above.
\$ 70.00 per customer per month for customers served at secondary voltages.
- (2) Monthly Generation Reservation Fee:
\$0.86 times the standby contract capacity in kW, per month.
- (3) Non-Generation Charge:
Monthly non-generation fixed charges per kW of standby contract capacity will be as follows. For standby contract capacity set according to paragraph (d) of the "Standby Contract Capacity" section above, the charge for all months will be based on the standby contract capacity specified for June through October.
 - (a) \$1.51 per kW at transmission voltage
 - (b) \$2.36 per kW at subtransmission voltage
 - (c) \$3.25 per kW at primary voltage
 - (d) \$3.80 per kW at secondary voltage
- (4) Demand Charge:
 - (a) A daily on-peak demand charge for back-up or maintenance demand will be charged based on the determination of supplemental and back-up or maintenance power coincident with the daily highest 30-minute integrated reading during on-peak hours of the demand meter which measures the total load served by Detroit Edison.
 - (b) The daily on-peak demand charge for back-up power is \$0.90 per kW per day. Back-up demand equals standby contract capacity minus the 30-minute output of the customer's generator, but not less than zero, and not greater than the total load served by the Company, measured during periods other than maintenance periods as defined below. If the customer's total internal load is less than or equal to the output of the generator, then back-up demand will be zero for that day.
 - (c) The daily on-peak demand charge for maintenance power is \$0.48 per kW per day. Maintenance demand equals standby contract capacity minus the 30-minute output of the customer's generator, but not less than zero, and not greater than the total load served by the Company, during maintenance periods as defined below. If the customer's total internal load is less than or equal to the output of the generator, then maintenance demand will be zero for that day.
- (5) Energy Charge:
An energy charge for back-up and maintenance power will be charged based on standby contract capacity less the output of the customer's generator, but not less than zero. For customers served on supplemental rate schedules D4, D6, D6.1, D8, and E4, the energy charge will be the D6 on-peak energy charge, 2.59¢ per kWh, plus appropriate credits and surcharges, including but not limited to off-peak credit, voltage level credit, and substation credit. For customers served on supplemental rate schedules D3, D3.3, and E5, the energy charge will be the applicable energy charge plus surcharges less a credit per kWh equal to the non-generation fixed charge per kW, \$3.80, divided by 500, applied to the first 500 hours use of standby contract capacity per month for back-up or maintenance power. The energy as stated herein, is also subject to the provision of schedule designation B-4.6 PSCR clause.

**STANDARD CONTRACT RIDER NO. 3
PARALLEL OPERATION AND STANDBY SERVICE**

- (6) Waivers and limits for demand/energy rates:
For customers served on supplemental rates schedules D4, D6, D6.1, D8, and E4, the following applies.
- (a) If the total of daily demand charges for the month is less than the monthly generation reservation fee, then the daily demand charges will be waived for that month.
 - (b) If the total of daily demand charges for the month is greater than the monthly generation reservation fee, then the generation reservation fee will be waived for that month.
 - (c) If the total of daily demand charges for the month is greater than the D6 on-peak billing demand charge times the standby contract capacity plus the difference between the product of the D6 maximum demand charge times the standby contract capacity and the standby non-generation fixed charges, then the customer will pay the D6 on-peak billing demand charge times the standby contract capacity plus the above difference. For customers on supplemental rate schedule D4, the above difference will be set to zero.
- (7) Waivers and limits for energy-only rates:
For customers served on supplemental rates schedules D3, D3.3, and E5, the following applies.
- (a) If the total of daily demand charges for the month is less than the monthly generation reservation fee, then the daily demand charges will be waived for that month.
 - (b) If the total of daily demand charges for the month is greater than the monthly generation reservation fee, then the daily demand charges will be waived for that month provided that the supplemental rate continues as an energy-only rate. If not, then paragraphs (6)(b) and (6)(c) above will apply.

MAINTENANCE PERIODS: A customer may specify, subject to conditions below set by the Company, up to 20 on-peak days during a year as maintenance days. In addition, the day after Thanksgiving and on-peak days occurring during the period from December 24 through January 1 plus contiguous recognized legal holidays may be scheduled as maintenance days subject to conditions below excluding (d). A maintenance day is a calendar 24-hour day.

Conditions:

- (a) The customer must request maintenance days in writing.
- (b) The Company must receive the request at least 45 days before the first requested maintenance day.
- (c) Requests will be honored according to the date received.
- (d) Requests may be refused by the Company if they conflict with the Company's own schedule of maintenance and expected demands. The Company will offer alternative maintenance days.
- (e) After the Company and the customer have agreed upon maintenance days, if there is a substantial change in circumstances which make the agreed upon schedule impractical for either party, the other party upon request shall make reasonable efforts to adjust the schedule in a manner that is mutually agreeable.

ORDER

JAN 21 1994

REMOVED BY. *Qes*

(Continued From Sheet No. R3d)

Standard Contract Rider No. 3 (Cont'd) Parallel Operation and Standby Service

ADJUSTMENT OF PRIOR RATCHETS: When a customer takes standby service under Rider No. 3, the setting or the increasing or decreasing of standby contract capacity will affect the existing ratchet levels on the supplemental rate as follows:

- (a) An amount in kW equal to the initial standby contract capacity (or to the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted maximum demand level for customers on supplemental rates D6, D6.1, **D7**, D8, and E4.
- (b) An amount in kW equal to 65% of the initial standby contract capacity (or of the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted on-peak billing demand level for customers on supplemental rates D4, D6, D6.1, **D7**, and D8.
- (c) An amount in kW equal to 50% of the initial standby contract capacity (or of the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted on-peak billing demand for customers on supplemental rate E4.

INTERRUPTIBLE STANDBY SERVICE:

- (a) Interruptible standby service is supplied in conjunction with supplemental rates D8 and D3.3, provided that the customer qualifies for D8 or D3.3 under the provisions of the respective rates.
- (b) For customers taking service on supplemental rate D8, the daily demand charge for back-up power and maintenance power will be waived on a day that the Company requests interruption, provided that the customer is assessed neither a non-interruption fee nor a non-interruption penalty under the terms of the D8 rates.
- (c) For customers taking service on supplemental rate D3.3, the customer's generator, prime mover, or other source of energy must be connected only to the interruptible circuit. The energy charge for back-up power and maintenance power will be the same as the energy charge for the D3.3 rate. The daily demand charge will be waived on a day that the Company interrupts the circuit.
- (d) Interruptible standby service will also be supplied in conjunction with any new interruptible supplemental rates approved by the Michigan Public Service Commission after January 1, 1989, under terms to be incorporated in this section.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

SCHEDULE OF ON-PEAK HOURS: See Schedule Designation B-4.4

POWER FACTOR CLAUSE: The rates and charges under this tariff are based on the customer maintaining a power factor of not less than 85% lagging. Customers are responsible for correcting power factors less than 70% at their own expense. The size, type and location of any power factor correction equipment must be approved by the Company. Such approval will not be unreasonably withheld. A penalty will be applied to the total amount of the monthly billing for supplemental and standby service for power factor below 85% lagging in accordance with the table in Power Factor Determination, Schedule Designation B-4.5. The penalty will not be applied to the on-peak billing demand ratchet nor to the minimum contract demand of the supplemental rate, but will be applied to metered quantities.

EFFECTIVE FOR BILLS RENDERED ON
AND AFTER FEBRUARY 1, 2006
UNDER AUTHORITY OF ORDER OF THE
MICHIGAN PUBLIC SERVICE COMMISSION
DATED DECEMBER 22, 2005
IN CASE NO. U-14399

(Continued From Sheet No. R3d)

Standard Contract Rider No. 3 (Cont'd) Parallel Operation and Standby Service

ADJUSTMENT OF PRIOR RATCHETS: When a customer takes standby service under Rider No. 3, the setting or the increasing or decreasing of standby contract capacity will affect the existing ratchet levels on the supplemental rate as follows:

- (a) An amount in kW equal to the initial standby contract capacity (or to the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted maximum demand level for customers on supplemental rates D6, D6.1, D8, and E4.
- (b) An amount in kW equal to 65% of the initial standby contract capacity (or of the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted on-peak billing demand level for customers on supplemental rates D4, D6, D6.1, and D8.
- (c) An amount in kW equal to 50% of the initial standby contract capacity (or of the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted on-peak billing demand for customers on supplemental rate E4.

INTERRUPTIBLE STANDBY SERVICE:

- (a) Interruptible standby service is supplied in conjunction with supplemental rates D8 and D3.3, provided that the customer qualifies for D8 or D3.3 under the provisions of the respective rates.
- (b) For customers taking service on supplemental rate D8, the daily demand charge for back-up power and maintenance power will be waived on a day that the Company requests interruption, provided that the customer is assessed neither a non-interruption fee nor a non-interruption penalty under the terms of the D8 rates.
- (c) For customers taking service on supplemental rate D3.3, the customer's generator, prime mover, or other source of energy must be connected only to the interruptible circuit. The energy charge for back-up power and maintenance power will be the same as the energy charge for the D3.3 rate. The daily demand charge will be waived on a day that the Company interrupts the circuit.
- (d) Interruptible standby service will also be supplied in conjunction with any new interruptible supplemental rates approved by the Michigan Public Service Commission after January 1, 1989, under terms to be incorporated in this section.

SUBSTATION CREDIT: Available to customers served at subtransmission voltage level (24 to 41.6 kW) or higher who provide the on-site substation including all necessary transforming, controlling, and protective equipment. A credit of \$.30 per kW shall be applied to the non-generation charge per kW of standby capacity.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

SCHEDULE OF ON-PEAK HOURS: See Schedule Designation B-4.4

STANDARD CONTRACT RIDER NO. 3
PARALLEL OPERATION AND STANDBY SERVICE

ADJUSTMENT OF PRIOR RATCHETS: When a customer takes standby service under Rider No. 3, the setting or the increasing or decreasing of standby contract capacity will affect the existing ratchet levels on the supplemental rate as follows:

- (a) An amount in kW equal to the initial standby contract capacity (or to the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted maximum demand level for customers on supplemental rates D6, D6.1, D8, and E4.
- (b) An amount in kW equal to 65% of the initial standby contract capacity (or of the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted on-peak billing demand level for customers on supplemental rates D4, D6, D6.1, and D8.
- (c) An amount in kW equal to 50% of the initial standby contract capacity (or of the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted on-peak billing demand for customers on supplemental rate E4.

INTERRUPTIBLE STANDBY SERVICE:

- (a) Interruptible standby service is supplied in conjunction with supplemental rates D8 and D3.3, provided that the customer qualifies for D8 or D3.3 under the provisions of the respective rates.
- (b) For customers taking service on supplemental rate D8, the daily demand charge for back-up power and maintenance power will be waived on a day that the Company requests interruption, provided that the customer is assessed neither a non-interruption fee nor a non-interruption penalty under the terms of the D8 rates.
- (c) For customers taking service on supplemental rate D3.3, the customer's generator, prime mover, or other source of energy must be connected only to the interruptible circuit. The energy charge for back-up power and maintenance power will be the same as the energy charge for the D3.3 rate. The daily demand charge will be waived on a day that the Company interrupts the circuit.
- (d) Interruptible standby service will also be supplied in conjunction with any new interruptible supplemental rates approved by the Michigan Public Service Commission after January 1, 1989, under terms to be incorporated in this section.

EXPERIMENTAL STANDBY PROVISION:

- (1) Customers taking service on rates D3, D3.3, and E5 who install generating equipment on or after January 1, 1989, or who are operating generating equipment installed prior to January 1, 1989, with the Company's written permission may take standby service under this provision subject to conditions herein.
- (2) The total of standby contract capacity from all customers permitted under this provision may not exceed 2000 kW.
- (3) Customers requesting service under this provision will be eligible to take service in the order that the Company approves their applications for interconnection. If a customer does not begin parallel operation within 12 months of the date of initial Company approval of the interconnection, then the customer must submit a new request for service under the provision.
- (4) A customer without generation facilities installed and operating with the Company's written permission prior to January 1, 1989, and who is being served at a

STANDARD CONTRACT RIDER NO. 4
RESALE OF SERVICE

APPLICABLE TO:

General Service Rate
Large General Service Rate
Primary Supply Rate

Schedule Designation D3
Schedule Designation D4
Schedule Designation D6

Electricity supplied to a customer is for his exclusive use on the premises to which it is delivered by the Company. Customers desiring to resell electric service to their tenants must secure authority from the Company which will be evidenced by a rider attached to the contract for service. Resale option is closed to new service or expanded service for resale for residential service as of March 31, 1979.

MULTIPLE OCCUPANCY BUILDINGS: The owner or operator of an office building, apartment building, etc., with at least thirty tenants (or less at the option of the Company where extensions of the Company service to the individual tenants is impractical) whose combined requirements regularly exceed 20,000 kilowatthours per month, may purchase electric energy from the Company for resale to the tenants of the building on condition that service to each tenant shall be separately metered, and that the tenants shall be charged for such service the current rate of the Company for similar service under like conditions.

No landlord may charge his tenants more nor less for resold electric service than the tenants would be charged by the Company if served directly. If this requirement is violated, the Company may refuse service to the building. The renting of premises with the cost of electric service included in the rental is held not to be a resale of service. The Company does not furnish nor maintain meters for the resale of energy by landlords to tenants.

MOBILE HOME PARKS: In some cases it is not practical for the Company to furnish service directly to individual mobile homes in mobile home parks. Because of this, the park operators may purchase electric energy from the Company for resale to tenants, provided that service to each tenant buying energy shall be separately metered and billed at the Company's Residential Service Rate.

The Operator shall provide the distribution system in the park and meters acceptable to the Company suitably protected from the weather. The Operator may purchase meters from the Company when available, or from a vendor other than the Company.

If an Operator resells energy without complying with the above provisions, the Company may refuse service to him.

CONTRACT TERM: The customer may take service at any applicable filed rate listed above but he will be required to sign a rider modifying the contract form prescribed for one of the applicable filed rates.

Issued: July 21, 1981
By: E. L. Grove, Jr.
Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on
and after July 23, 1981 under
authority of Order of the Michigan
Public Service Commission dated
July 21, 1981 in Case U-6488.

STANDARD CONTRACT RIDER NO. 4

The service contract shall provide that each ultimate user's billing shall be audited once every nine (9) to fifteen (15) months. At the option of the reselling customer, the audit will be conducted either by the Company or by an independent auditing firm, approved by the Company. The reselling customer will be assessed a reasonable fee for an audit conducted by the Company. where the audit is conducted by an independent auditing firm, a certified copy of the results of such audit shall be immediately submitted to the Company in a form approved by the Company.

The service contract shall also provide that the reselling customer will be responsible for the testing of the ultimate user's meters at least once every three (3) years, and that the accuracy of such meters be maintained within the limits as prescribed in Michigan Public Service Commission Order No. 1692. Meters shall be tested only by outside testing services or laboratories approved by the Company and a certified copy of all testing results shall be immediately submitted to the Company.

A record of each meter, including testing results, shall be kept by the reselling customer during his use of the meter and for an additional period of one year thereafter. When requested, the reselling customer shall submit certified copies of said test results to the Company.

The reselling customer shall supply each of his ultimate users with an electrical system adequate to meet the needs of the ultimate user with respect to the nature of service, voltage level, and other conditions of service. The customer who resells his power at Residential Rates shall receive a 15% discount on the resale portion of his bills, provided the reselling customer complies with the terms of Standard Contract Rider No. 4. Such discount shall cover the periods for which the customer provides positive evidence of compliance.

If the reselling customer fails to meet his obligations under this rule, the Company shall immediately notify the Consumer Services Division and Business Service Division of the Michigan Public Service Commission. If, after review with the reselling customer the problem is not resolved, the Company will discontinue electric service until such time as the problem is resolved. The Company shall not incur any liability as the result of this discontinuance of electric service.

At the option of the reselling customer, the audit will be conducted either by the Company or by an independent auditing firm, approved by the Company. The reselling customer will be assessed a reasonable fee for an audit conducted by the Company. Where the audit is conducted by an independent auditing firm, a certified copy of the results of such audit shall be immediately submitted to the Company in a form approved by the Company.

The service contract shall also provide that the reselling customer will be responsible for the testing of the ultimate user's meters at least once every three (3) years, and that the accuracy of such meters be maintained within the limits as prescribed in Michigan Public Service Commission Order No. 1692. Meters shall be tested only by outside testing services or laboratories approved by the Company and a certified copy of all testing results shall be immediately submitted to the Company.

A record of each meter, including testing results, shall be kept by the reselling customer during his use of the meter and for an additional period of one year thereafter. When requested, the reselling customer shall submit certified copies of said test results to the Company.

The reselling customer shall supply each of his ultimate users with an electrical system adequate to meet the needs of the ultimate user with respect to the nature of service, voltage level, and other conditions of service. The customer who resells his power at Domestic Rates shall receive a 15% discount on the resale portion of his bills, provided the reselling customer complies with the terms of Standard Contract Rider No. 4. Such discount shall cover the periods for which the customer provides positive evidence of compliance.

If the reselling customer fails to meet his obligations under this rule, the Company shall immediately notify the Consumer Services Division and Business Service Division of the Michigan Public Service Commission. If, after review with the reselling customer the problem is not resolved, the Company will discontinue electric service until such time as the problem is resolved. The Company shall not incur any liability as the result of this discontinuance of electric service.

Issued: July 21, 1981
By: E. L. Grove, Jr.
Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on and after July 23, 1981 under authority of Order of the Michigan Public Service Commission dated July 21, 1981 in Case U-6488.

STANDARD CONTRACT RIDER NO. 4
RESALE OF SERVICE-Continued

The service contract shall provide that each ultimate user's billing shall be audited once every nine (9) to fifteen (15) months. At the option of the reselling customer, the audit will be conducted either by the Company or by an independent auditing firm, approved by the Company. The reselling customer will be assessed a reasonable fee for an audit conducted by the Company. Where the audit is conducted by an independent auditing firm, a certified copy of the results of such audit shall be immediately submitted to the Company in a form approved by the Company.

The service contract shall also provide that the reselling customer will be responsible for the testing of the ultimate user's meters at least once every three (3) years, and that the accuracy of such meters be maintained within the limits as prescribed in Michigan Public Service Commission Order No. 1692. Meters shall be tested only by outside testing services or laboratories approved by the Company and a certified copy of all testing results shall be immediately submitted to the Company.

A record of each meter, including testing results, shall be kept by the reselling customer during his use of the meter and for an additional period of one year thereafter. When requested, the reselling customer shall submit certified copies of said test results to the Company.

The reselling customer shall supply each of his ultimate users with an electrical system adequate to meet the needs of the ultimate user with respect to the nature of service, voltage level, and other conditions of service. The customer who resells his power at Domestic Rates shall receive a 15% discount on the resale portion of his bills, provided the reselling customer complies with the terms of Standard Contract Rider No. 4. Such discount shall cover the periods for which the customer provides positive evidence of compliance.

If the reselling customer fails to meet his obligations under this rule, the Company shall immediately notify the Consumer Services Division and Business Service Division of the Michigan Public Service Commission. If, after review with the reselling customer the problem is not resolved, the Company will discontinue electric service until such time as the problem is resolved. The Company shall not incur any liability as the result of this discontinuance of electric service.

**STANDARD CONTRACT RIDER NO. 5
COGENERATION**

AVAILABILITY: Customers who employ cogeneration technology as an energy source and sell electric output of their cogeneration facility to the Company may receive service under the filed rates and applicable riders:

General Service Rate	Schedule Designation D3
Interruptible General Service Rate	Schedule Designation D3.3
Large General Service Rate	Schedule Designation D4
Primary Supply Rate	Schedule Designation D6
Alternative Primary Supply Rate	Schedule Designation D6.1
Primary Space Conditioning Rate	Schedule Designation D6.2
Interruptible Supply Rate	Schedule Designation D8

This rate is available only to customers who obtain qualifying status from the Federal Energy Regulatory Commission. Prior to interconnection, the customer shall provide a copy of such notification to the Company.

CHARACTER OF SERVICE:

- A. Sales to customers:
 - 1. As specified under the applicable rate.
- B. Sales by the Customer to the Company:
 - 1. As specified under contractual agreement.
- C. The customer shall install, at his expense, the necessary controlling, additional metering and protective equipment according to specifications of the Company. The Company shall not be liable for damage to customer-owned equipment caused by the interconnection.
- D. Billing for both sales to and sales from the customer will be calculated by the Company.

RATE:

- A. Sales to Customers:
 - 1. As specified under the applicable filed rate.
- B. Sales by the Customer to the Company:
 - 1. New Facilities:
 - a. Energy Sales: The rate will be based on the forecasted average incremental cost of energy. The rates will recognize time-of-day price variations based on a weekly forecast.

authority of Order of the Michigan
Public Service Commission dated
July 21, 1981 in Case U-6488.

STANDARD CONTRACT RIDER NO. 5
COGENERATION-Continued

- b. Capacity and Energy Sales: The rate will be based on the combined capacity and energy costs of the Belle River Power Plant, adjusted to reflect the effects of inflation between the in-service date of the cogeneration facility and the in-service date of the Belle River Power Plant. This rate, so determined, will be adjusted to be reflective of the forecasted capacity factor, availability, operating schedule and the ability of the Company to dispatch the said cogeneration unit. The rate so determined will apply to facilities with a capacity of 100 kW or less. The rate for facilities having a capacity of over 100 kW will be made under negotiated agreement.
2. Old Facilities:
- a. Energy Sales: The rate will be based on the forecasted average incremental cost of energy. The rate will recognize time-of-day variations based on a weekly forecast.
- b. Capacity and Energy Sales: No recognition will be made for capacity installed before November 1978 unless substantial proof is shown that the generator and protective equipment is new or equivalent to new. Refurbishing old equipment will not qualify the facility as new capacity.
3. A one mill per kilowatthour charge shall be assessed to all customers on this rate to offset the Company's additional administrative expenses associated with these transactions.

SPECIAL PROVISIONS AND CONDITIONS:

A. Cogeneration Capacity Sales to the Company:

1. Cogeneration Planned Maintenance: Annually the customer shall supply the Company with a schedule of all planned outages for the year in question. The customer and the Company shall agree to a maintenance schedule of mutual benefit.
2. Contract Capacity: The contract must specify the minimum and maximum kW capacity available to the utility from the cogeneration facility under normal operating conditions.
3. Availability: The customer shall supply the Company with a statement of the projected annual availability of the capacity stated in the Contract Capacity.
4. Capacity Factor: The customer shall supply the Company with a statement of the projected capacity factor and operating schedule for the cogeneration facility in question.
5. Failure of the cogeneration facility to operate at the level of performance forecasted by the customer shall result in the Company adjusting the capacity purchase price to reflect the demonstrated performance of the cogeneration facility in question.

MAR 31 1983
REMOVED BY JEA

STANDARD CONTRACT RIDER NO. 5
COGENERATION-Continued

- b. Capacity and Energy Sales: The rate will be based on the combined capacity and energy costs of the next major unit of generation under construction to be added to the Company's system, adjusted to reflect the effects of inflation between the in-service date of the cogeneration facility and the in-service date of the Company's next major generating unit under construction. This rate, so determined, will be adjusted to be reflective of the forecasted capacity factor, availability, operating schedule and the ability of the Company to schedule the said cogeneration unit.
2. Old Facilities:
- a. Energy Sales: The rate will be based on the forecasted average incremental cost of energy. The rate will recognize time-of-day variations based on a weekly forecast.
- b. Capacity and Energy Sales: The rate will be based on the average cost of capacity for the Company based on the calendar year 1978. The rate, so determined, will be adjusted to be reflective of the capacity factor, availability, operating schedule and the ability of the Company to schedule the said cogeneration unit. The energy will be the monthly average energy cost for the Company.

SPECIAL PROVISIONS AND CONDITIONS:

A. Cogeneration Capacity Sales to the Company:

1. Cogeneration Planned Maintenance: Annually the customer shall supply the Company with a schedule of all planned outages for the year in question. The customer and the Company shall agree to a maintenance schedule of mutual benefit.
 2. Contract Capacity: The contract must specify the minimum and maximum kW capacity available to the utility from the cogeneration facility under normal operating conditions.

STANDARD CONTRACT RIDER NO. 5
COGENERATION-Continued

B. Maintenance or Back-up Capacity: Cogeneration customers desiring standby capacity for equipment failure or planned maintenance may contract with the Company the amount of standby capacity desired. The charge for the standby capacity will be calculated at the approved Standard Contract Rider No. 3 provision.

Experimental Standby Rate: The customer may elect to pay for standby service at the following rate:

1. \$.60 per kW per day, plus
2. the incremental energy cost associated with the energy to service the capacity, plus
3. full payment of the maximum demand charge in the rate the customer takes service

DEFINITIONS:

1. Cogeneration Technology: The sequential use of steam, exhaust steam or waste steam for the generation of electricity. The overall thermal efficiency of the cogeneration facility must always be in excess of 45%.
2. New Facility: Construction of new or additional capacity which commenced on or after November 9, 1978.
3. Old Facility: Construction of capacity which commenced before November 9, 1978.
4. Average Incremental Energy Cost: The cost of a block of energy of varying size which is normally made up of the most expensive resources, either purchased or generated, to serve firm customer load. The size of the varying block depends upon the amount of energy available from qualified facilities.

Detroit, Michigan 48226

Effective on service rendered on and after August 27, 1982 under authority of Order of the Michigan Public Service Commission dated August 27, 1982 in Case U-6798.

STANDARD CONTRACT RIDER NO. 6
SMALL POWER PRODUCING FACILITIES

AVAILABILITY:

Customers who develop small power producing facilities and sell electric output from their facility to the Company may receive service under the filed rates and applicable riders:

General Service Rate	Schedule Designation D3
Interruptible General Service Rate	Schedule Designation D3.3
Large General Service Rate	Schedule Designation D4
Primary Supply Rate	Schedule Designation D6
Bulk Power Supply Rate	Schedule Designation D7
Interruptible Supply Rate	Schedule Designation D8

CHARACTER OF SERVICE:

A. Sales to customers:

1. As specified under the applicable rate.

B. Sales by the customer to the Company:

1. As specified under contractual agreement.

C. The customer shall install, at his expense, the necessary controlling additional metering and protective equipment according to specifications of the Company. The Company shall not be liable for damage to customer-owned equipment caused by the interconnection.

D. Billing for both sales to and sales from the customer will be calculated by the Company.

RATE:

A. Sales to customer:

1. As specified under the applicable filed rate.

B. Sales by the customer to the Company:

1. New Facilities:

- a. Energy Sales: The rate will be based on the forecasted average incremental cost of energy. The rates will recognize time-of-day price variations based on a weekly forecast.

Public Service Commission dated
July 21, 1981 in Case U-6488.

STANDARD CONTRACT RIDER NO. 6
SMALL POWER PRODUCING FACILITIES-Continued

RATE: (continued)

B. 1. (Continued)

- b. Capacity and Energy Sales: The rate will be based on the combined capacity and energy costs of the Belle River Power Plant adjusted to reflect the effects of inflation between the in-service date of the cogeneration facility and the in-service date of the Belle River Power Plant. The rate so determined will be adjusted to be reflective of the forecasted capacity, availability, operating schedule and the ability of the Company to dispatch the said small power producing facility. The rate so determined will apply to facilities with a capacity of 100 kW or less. The rate for facilities having a capacity of over 100 kW will be made under negotiated agreement.

2. Old Facilities:

- a. Energy Sales: The rate will be based on the forecasted average incremental cost of energy. The rate will recognize time-of-day variations based on a weekly forecast.
- b. Capacity and Energy Sales: No recognition will be made in payment for capacity installed before November 1978 unless substantial proof is shown that the generator and protective equipment is new or equivalent to new. Refurbishing old equipment will not qualify the facility as new capacity.

3. A one mill per kilowatthour charge shall be assessed to all customers on this rate to offset the Company's additional administrative expenses associated with these transactions.

SPECIAL PROVISIONS AND CONDITIONS:

A. Small Power Producing Facility Capacity Sales to the Company:

1. Small Power Producing Facility Planned Maintenance: Annually the customer shall supply the Company with a schedule of all planned outages for the year in question. The customer and the Company shall agree to a maintenance schedule of mutual benefit.
2. Contract Capacity: The contract must specify the minimum and maximum kW capacity available to the utility from the small power producing facility under normal operating conditions.
3. Availability: The customer shall supply the Company with a statement of the projected annual availability of the capacity stated in the Contract Capacity.

STANDARD CONTRACT RIDER NO. 6
SMALL POWER PRODUCING FACILITIES-Continued

RATE: (continued)

B. 1. (Continued)

- b. Capacity and Energy Sales: The rate will be based on the combined capacity and energy costs of the next major unit of generation under construction to be added to the Company's system adjusted to reflect the effects of inflation between the in-service date of the cogeneration facility and the in-service date of the Company's next major generating unit under construction. The rate so determined will be adjusted to be reflective of the forecasted capacity, availability, operating schedule and the ability of the Company to schedule the said small power producing facility.

2. Old Facilities:

- a. Energy Sales: The rate will be based on the forecasted average incremental cost of energy. The rate will recognize time-of-day variations based on a weekly forecast.
- b. Capacity and Energy Sales: The rate will be based on the combined average cost of capacity and energy for the Company based on the calendar year 1978. The rate so determined will be adjusted to be reflective of the capacity factor, availability, operating schedule and the ability of the Company to schedule the said small power producing facility. The energy will be the monthly average energy cost for the Company.

SPECIAL PROVISIONS AND CONDITIONS:

A. Small Power Producing Facility Capacity Sales to the Company:

1. Small Power Producing Facility Planned Maintenance: Annually the customer shall supply the Company with a schedule of all planned outages for the year in question. The customer and the Company shall agree to a maintenance schedule of mutual benefit.
2. Contract Capacity: The contract must specify the minimum and maximum kW capacity available to the utility from the small power producing facility under normal operating conditions.
3. Availability: The customer shall supply the Company with a statement of the projected annual availability of the capacity stated in the Contract Capacity.

SPECIAL PROVISIONS AND CONDITIONS: (continued)

A. (continued)

4. Capacity Factor: The customer shall supply the Company with a statement of the projected capacity factor and operating schedule for the small power producing facility in question.
5. Failure of the small power producing facility to operate at the level of performance forecasted by the customer shall result in the Company adjusting the Capacity purchase price to reflect the demonstrated performance of the small power producing facility in question.

- B. Maintenance or Back-Up Capacity: Small power producing customers desiring standby capacity for equipment failure or planned maintenance may contract with the Company the amount of standby capacity desired. The charge for the standby capacity will be calculated at the approved Standard Contract Rider No. 3 Provision.

Experimental Standby Rate: The customer may elect to pay for standby service at the following rate:

1. \$0.60 per kW per day, plus
2. the incremental energy cost associated with the energy to service the capacity, plus
3. full payment of the maximum demand charge in the rate the customer takes service.

DEFINITIONS:

1. Small Power Producing Facility: Produces electric energy solely by the use, as a primary energy source of biomass, waste, renewable resources, or any combination thereof and has a power production capability which together with any other facilities located at the same site is not greater than 80 MW.
2. New Facility: Construction of new or additional capacity which commenced on or after November 9, 1978.
3. Old Facility: Construction of capacity which commenced before November 9, 1978.
4. Average Incremental Energy Cost: The cost of a block of energy of varying size which is normally made up of the most expensive resources, either purchased or generated, to serve firm customer load. The size of the varying block depends upon the amount of energy available from qualified facilities.

Standard Contract Rider No. 7

Greenhouse Lighting Service

APPLICABLE TO: General Service Rate
Large General Service Rate

Schedule Designation D3
Schedule Designation D4

Available on an optional basis to customers desiring high intensity discharge lighting service for greenhouses or other environmentally controlled growing facilities as a daylight supplement. All lighting on this rider shall be separately metered. The customer will furnish, install, own, and maintain all equipment comprising the lighting system. No other device may be connected to this circuit except for controls, lighting and associated equipment.

HOURS OF SERVICE: Dusk to dawn service for circuits controlled by photo-sensitive or clock timing devices.

CURRENT, PHASE AND VOLTAGE: Alternating current, 60 hertz, single phase, nominally at 120/240 volts, three-wire; or three-phase, four-wire, Y connected at 208Y/120 volts; or under certain conditions three-phase, four-wire, Y connected at 480Y/277 volts.

RATE PER MONTH:

Service Charge:
\$1.95 per customer per month, plus

Energy Charge:
3.932¢ per kWh for all kWh

POWER SUPPLY COST RECOVERY FACTOR: The energy charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

BILLING: Billing will be on a monthly basis.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: The Service Charge.

CONTRACT TERM: The customer shall contract to remain on this rate for at least 12 months, terminable on three days' written notice after the initial 12 months by either party. Where special services are required, or where the investment to serve is out of proportion to the revenue obtainable therefrom, the term will be as specified in the applicable rider.

Detroit, Michigan 48226

Effective for bills rendered on
and after March 26, 2001 under
authority of order of the Michigan
Public Service Commission in Case
No. U-12478 dated November 2, 2000.

**STANDARD CONTRACT RIDER NO. 7
GREENHOUSE LIGHTING SERVICE**

APPLICABLE TO: General Service Rate Schedule Designation D3
Large General Service Rate Schedule Designation D4

Available on an optional basis to customers desiring high intensity discharge lighting service for greenhouses or other environmentally controlled growing facilities as a daylight supplement. All lighting on this rider shall be separately metered. The customer will furnish, install, own, and maintain all equipment comprising the lighting system. No other device may be connected to this circuit except for controls, lighting and associated equipment.

HOURS OF SERVICE: Dusk to dawn service for circuits controlled by photo-sensitive or clock timing devices.

CURRENT, PHASE AND VOLTAGE: Alternating current, 60 hertz, single phase, nominally at 120/240 volts, three-wire; or three-phase, four-wire, Y connected at 208Y/120 volts; or under certain conditions three-phase, four-wire, Y connected at 480Y/277 volts.

RATE PER MONTH:

Service Charge:
\$2.05 per customer per month, plus
Energy Charge:
4.85¢ per kWh for all kWh

BASE RATE REDUCTION: A credit of 0.15746¢ per kWh applied to all kWh.

POWER SUPPLY COST RECOVERY FACTOR: The energy charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

BILLING: Billing will be on a monthly basis.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: The Service Charge.

CONTRACT TERM: The customer shall contract to remain on this rate for at least 12 months, terminable on three days' written notice after the initial 12 months by either party. Where special services are required, or where the investment to serve is out of proportion to the revenue obtainable therefrom, the term will be as specified in the applicable rider.

Standard Contract Rider No. 8

Commercial Space Heating

APPLICABLE TO: General Service Rate
Large General Service Rate

Schedule Designation D3
Schedule Designation D4

Available on an optional basis to customers desiring service for commercial space conditioning furnished through separately metered circuits to which no other device except electric space heating, water heating, air conditioning, or humidity control equipment may be connected and provided that all of the space heating must be either total electric or an electric heat pump supplemented by a fossil fuel furnace installed on a permanent basis. The customer must provide special circuits, the design and method of installation of which are approved by the Company as adapted to this service.

Electric space heating under the terms of this rider will be considered to include heating by light systems, provided the primary means of space heating at the time of maximum requirements will be furnished by the lighting system, with the balance furnished by supplementary electric heating equipment. After June 15, 1970, under the authority of the Michigan Public Service Commission in Case U-3189, service to facilities which heat by lighting is not available for premises not previously qualified for service hereunder.

RATE PER MONTH:

Service Charge:
\$8.78 per customer per month, plus

Energy Charge:
8.517¢ per kWh for all kWh, except that during the billing months of November through May, usage in excess of 1,000 kWh per month shall be billed at 6.208¢ per kWh.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

EFFECTIVE FOR SERVICE RENDERED ON
AND AFTER NOVEMBER 24, 2004
UNDER AUTHORITY OF ORDER OF THE
MICHIGAN PUBLIC SERVICE COMMISSION
DATED NOVEMBER 23, 2004
IN CASE NO. U-13808

**STANDARD CONTRACT RIDER NO. 8
COMMERCIAL SPACE HEATING**

APPLICABLE TO: General Service Rate Schedule Designation D3
Large General Service Rate Schedule Designation D4

Available on an optional basis to customers desiring service for commercial space conditioning furnished through separately metered circuits to which no other device except electric space heating, water heating, air conditioning, or humidity control equipment may be connected and provided that all of the space heating must be either total electric or an electric heat pump supplemented by a fossil fuel furnace installed on a permanent basis. The customer must provide special circuits, the design and method of installation of which are approved by the Company as adapted to this service.

Electric space heating under the terms of this rider will be considered to include heating by light systems, provided the primary means of space heating at the time of maximum requirements will be furnished by the lighting system, with the balance furnished by supplementary electric heating equipment. After June 15, 1970, under the authority of the Michigan Public Service Commission in Case U-3189, service to facilities which heat by lighting is not available for premises not previously qualified for service hereunder.

RATE PER MONTH:

Service Charge:

\$9.24 per customer per month, plus

Energy Charge:

9.376¢ per kWh for all kWh, except that during the billing months of November through May, usage in excess of 1,000 kWh per month shall be billed at 6.946¢ per kWh.

BASE RATE REDUCTION: A credit of 0.28012¢ per kWh applied to all kWh.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

5% SECURITIZATION REDUCTION: A credit of 5% applied to the base bill and surcharges, excluding the Rate Increase Surcharge.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: The Service Charge.

Effective for service rendered on and after January 24, 1988, under authority of order of the Michigan Public Service Commission dated January 12, 1988 in Case U-7660.

STANDARD CONTRACT RIDER NO. 8
COMMERCIAL SPACE HEATING

APPLICABLE TO: General Service Rate
Large General Service Rate

Schedule Designation D3
Schedule Designation D4

Available on an optional basis to customers desiring service for commercial space conditioning furnished through separately metered circuits to which no other device except electric space heating, water heating, air conditioning, or humidity control equipment may be connected and provided that all of the space heating must be either total electric or an electric heat pump supplemented by a fossil fuel furnace installed on a permanent basis. The customer must provide special circuits, the design and method of installation of which are approved by the Company as adapted to this service.

Electric space heating under the terms of this rider will be considered to include heating by light systems, provided the primary means of space heating at the time of maximum requirements will be furnished by the lighting system, with the balance furnished by supplementary electric heating equipment. After June 15, 1970, under the authority of the Michigan Public Service Commission in Case U-3189, service to facilities which heat by lighting is not available for premises not previously qualified for service hereunder.

RATE PER MONTH:

Service Charge:
\$7.70 per customer per month, plus

Energy Charge:
8.7¢ per kWh for all kWh, except that during the billing months of November through May, usage in excess of 1,000 kWh per month shall be billed at 7.79¢ per kWh.

SURCHARGE ADJUSTMENT: .0368¢ per kWh for all kWh.

1986 TAX REFORM ACT SURCHARGE: -.195¢ per kWh for all kWh.

POWER SUPPLY COST RECOVERY FACTOR: The Energy Charge in the above rate is subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

Standard Contract Rider No. 8 (Continued)

Commercial Space Heating

CONTRACT TERM: This rate is made effective by a rider modifying the contract form prescribed for one of the applicable filed rates listed above. The contract term is co-extensive with the contract term of the applicable filed rate under which service is being taken.

INSULATION STANDARDS FOR ELECTRIC HEATING: See Schedule Designation B-2.12.

OPTIONAL PROVISION FOR CERTAIN COMMON AREA ACCOUNTS: Electric heating and common area usage of apartment or condominium accounts supplied through a single meter and billed under the terms of the Domestic Space Heating Rate D2 prior to September 28, 1978 may be billed under this provision without the necessity of separate metering if an initial block of kilowatthours is billed at the current General Service Rate D3. This initial block of kilowatthours will be calculated each November by averaging the usage during the previous billing months of June through October. Usage in excess of the initial block of kilowatthour per month shall be billed at 8.517¢ per kilowatthour during the billing months of June through October and 6.208¢ per kilowatthour during the billing months of November through May. The only service charge to be billed to a customer utilizing this provision will be the D3 service charge.

SUPPLEMENTAL SPACE HEATING PROVISION: This provision is available to customers taking service under the General Service Rate D3 or the Large General Service Rate D4 who purchase energy for a minimum of 10 kW of supplemental, permanently installed, electric space heating equipment. To qualify for this provision, a customer must certify in writing the amount of permanently installed space heating equipment, subject to inspection at the option of the Company, and have the said equipment on separately metered circuits to which no other device is connected. Rule B-2.12, Insulation Standards for Electric Heating, will not apply to this provision.

SUPPLEMENTAL SPACE HEATING PROVISION: This provision is available to customers taking service under the General Service Rate D3 or the Large General Service Rate D4, who purchase energy for a minimum of 10kW of supplemental, permanently installed, electric space heating equipment. To qualify for this provision, a customer must certify in writing the amount of permanently installed space heating equipment, subject to inspection at the option of the Company, and have the said equipment on separately metered circuits to which no other device is connected. Rule B-2.12 insulation standards for electric heating, will not apply to this provision.

STANDARD CONTRACT RIDER NO. 8
COMMERCIAL SPACE HEATING

CONTRACT TERM: This rate is made effective by a rider modifying the contract form prescribed for one of the applicable filed rates listed above. The contract term is co-extensive with the contract term of the applicable filed rate under which service is being taken.

INSULATION STANDARDS FOR ELECTRIC HEATING: See Schedule Designation B-2.12.

OPTIONAL PROVISION FOR CERTAIN COMMON AREA ACCOUNTS: Electric heating and common area usage of apartment or condominium accounts supplied through a single meter and billed under the terms of the Domestic Space Heating Rate D2 prior to September 28, 1978 may be billed at this rate without the necessity of separate metering if an initial block of kilowatthours is billed at the current General Service Rate D3. The initial block of kilowatthours will be determined by averaging the usage during the previous billing months of June through October. This initial block of kilowatthours will be billed on a General Service Rate D3 each billing month prior to applying the rate specified on this Rider. The only service charge to be billed to a customer utilizing this option will be the D3 service charge.

DATE 01-10-08

AVAILABILITY:

This rider is available to Full Service and Retail Access Service customers that add Qualifying New Load on or after January 1, 2005. Qualifying New Load is defined as load in kW that meets the following requirements:

New Locations

For new locations Qualifying New Load must be a minimum of 1,000 kW on the base rate.

Existing Locations

For existing locations Qualifying New Load must be the direct result of new equipment additions and meet the following minimum size requirements:

- 1) Qualifying New Load must be at least 20% of the highest 30-minute integrated site level demand over the previous 12 months but not less than 500 kW; and*
- 2) The combined existing base rate load and Qualified New Load must be at least 1,000 kW.*

Customers desiring service under this rider must provide the Company with an affidavit attesting to the addition of new equipment and the size of the Qualifying New Load.

METERING REQUIREMENTS: *The Qualifying New Load shall be separately metered. The Company and Customer may – as an alternative to separate metering – mutually agree to negotiate an amount of demand or energy usage for billing under this Rider for situations where it might be cost-prohibitive to separately meter the Qualifying New Load.*

RATE PER MONTH:

Full Service Customers:

Qualifying New Load will be priced per the Full Service charges for the applicable base rate and will receive an Economic Development Credit.

Economic Development Credit: An Economic Development Credit will be applied to Qualified New Load and will be equal to the difference between the Full Service Delivery Charge and the Retail Access Delivery Charge.

Surcharges and Credits: As approved by the Commission. See Schedule Designations on B-4.8 and B-4.9.

Retail Access Service Customers:

Delivery Charges: Qualifying New Load will be priced per the Retail Access Service delivery charges for the applicable base rate.

Surcharges and Credits: As approved by the Commission. See Schedule Designation B-4.9.

CONTRACT TERM: *Customers electing service under this rider must contract for and begin taking such service on or before December 31, 2007. The rate will be available for a three-year period beginning from the effective date of the contract.*

**STANDARD CONTRACT RIDER NO. 9
ECONOMIC DEVELOPMENT**

APPLICABLE TO:	Primary Supply Rate	Schedule Designation D6
	Alternative Primary Supply Rate	Schedule Designation D6.1
	Primary Space Conditioning Rate	Schedule Designation D6.2

Manufacturing and Manufacturing Research customers desiring separately metered interruptible service for loads not served prior to July 1, 1985 may take service under this rider. This rider is available to customers with a minimum on peak demand of 5,000 kW on Primary Supply Rate (D6) or 10,000 kW on Alternative Primary Supply Rate (D6.1). The new separately metered interruptible service must have a minimum single high 30 minute integrated demand of 1,000 kW. Electric energy from any facilities, other than the Company's, except for on-site generation installed prior to January 1, 1986, will be used to first reduce the sales on this rider. Standby service will not be billed at this rider, but must be taken under Riders No. 3, No. 5 or No. 6.

HOURS OF SERVICE: Twenty four hours daily except as follows: The customer shall be interrupted if the Company finds it necessary to do so in order to maintain system integrity, or when the marginal cost of energy needed to serve the customer's load equals or exceeds 3.75¢ per kilowatthour.

The customer shall be provided advance notice, whenever possible, of a probable interruption and its estimated duration. The customer may avoid interruption for economic purposes but not for system emergencies. If the customer chooses to avoid interruption, billing for energy will be at the cost of replacement energy plus 1.00¢ per kWh during the time of interruption plus the applicable voltage level charge, but not less than the normal rate under the rider.

RATE PER MONTH:
Energy Charge:
3.68¢ per kWh, except replacement energy.

Voltage Level Charges for service other than transmission voltage:
0.15¢ per kWh at distribution level.
0.05¢ per kWh at subtransmission level.

POWER SUPPLY COST RECOVERY FACTOR: All kilowatthours except replacement energy are subject to the provisions of Schedule Designation B4.6.

MINIMUM CHARGE: Shall be the "Maximum Demand Charge" as defined in the Primary Supply Rate (D6). In no event will the minimum charge be less than the product of 1,000 kW times the maximum demand charge.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B4.9.

By: E. L. Grove, Jr.
Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on and after April 1, 1986, under authority of Order of the Michigan Public Service Commission dated April 1, 1986 in Case U-8375

**STANDARD CONTRACT RIDER NO. 9
ECONOMIC DEVELOPMENT--Continued**

PHASE OUT SURCHARGES: Over the last three years of the contract, an increasing surcharge will be added to the energy charge under "Rate per Month", as follows:

- A. 0.67¢ per kWh effective January 1, 1994
- B. 1.34¢ per kWh effective January 1, 1995
- C. 2.0¢ per kWh effective January 1, 1996

Also the amounts as defined above in lines A through C will be added to the marginal energy cost limit of 3.75¢ per kWh under "Hours of Service".

POWER FACTOR CLAUSE: The rates and charges under this rider are based on customer maintaining a power factor of not less than 85% lagging. Power factors less than 70% will not be permitted and the customer will be required to install at his own expense such corrective equipment approved by the Company as may be necessary to improve power factor. A penalty will be applied to the total amount of the monthly billing for power factors below 85% lagging in accordance with the table in Power Factor Determination, Schedule Designation B-4.5. The Power Factor Clause shall not be applied to the minimum billing, but will be applied to metered quantities.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

METERING ADJUSTMENT: For customers metered at the transformer's secondary voltage, all measured quantities will be increased by 1%.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all facilities and related lines equipment required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

The customer is required to install a two-way communication link between the facility and the Detroit Edison System Operation Center.

The Company, at its option, may negotiate a block of energy applicable to this rider.

CONTRACT: Customers electing service under this rider must sign a contract on or before December 31, 1989. This Standard Contract Rider will terminate on December 31, 1996.

M/152

Issued: January 1, 1992
By: L. G. Garberding
Executive Vice President
and Chief Financial Officer
2000 Second Avenue
Detroit, Michigan 48226

Effective for service rendered on and after January 1, 1992, under authority of order of the Michigan Public Service Commission dated December 19, 1991 in Case U-8789.

STANDARD CONTRACT RIDER NO. 9
ECONOMIC DEVELOPMENT—Continued

PHASE OUT SURCHARGES: Over the last three years of the contract, an increasing surcharge will be added to the energy charge under "Rate per Month", as follows:

- A. 0.67¢ per kWh effective January 1, 1994
- B. 1.34¢ per kWh effective January 1, 1995
- C. 2.0¢ per kWh effective January 1, 1996

Also the amounts as defined above in lines A through C will be added to the marginal energy cost limit of 3.70¢ per kWh under "Hours of Service".

POWER FACTOR CLAUSE: The rates and charges under this rider are based on customer maintaining a power factor of not less than 85% lagging. Power factors less than 70% will not be permitted and the customer will be required to install at his own expense such corrective equipment approved by the Company as may be necessary to improve power factor. A penalty will be applied to the total amount of the monthly billing for power factors below 85% lagging in accordance with the table in Power Factor Determination, Schedule Designation B-4.5. The Power Factor Clause shall not be applied to the minimum billing, but will be applied to metered quantities.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

METERING ADJUSTMENT: For customers metered at the transformer's secondary voltage, all measured quantities will be increased by 1%.

Issued: April 1986
By: E. L. Grove, Jr.
Vice Chairman of the Board
2000 Second Avenue
Detroit, Michigan 48226

Effective on service rendered on and after April 1, 1986, under authority of Order of the Michigan Public Service Commission dated April 1, 1986 in Case U-8375

**STANDARD CONTRACT RIDER No. 10
INTERRUPTIBLE SUPPLY RIDER**

AVAILABILITY OF SERVICE: Available to Primary Supply Rate (D6) and Alternative Primary Supply Rate (D6.1) customers desiring interruptible service for a total of not less than 50,000 kilowatts of contracted interruptible service at a single location. The total contracted interruptible capacity on this tariff is limited to 400,000 kilowatts. This rider is effective for service rendered on and after January 1, 1993.

The contracted interruptible capacity limit on this tariff shall be increased to 525,000 kilowatts in 1994 and 650,000 kilowatts in 1995. The increase shall apply to customers desiring interruptible service for a total of not less than 5,000 kilowatts of contracted interruptible service at a single location.

In the event the total contracted interruptible capacity is less than the approved limit specified above, the Company may offer the remaining capacity to otherwise eligible customers willing to contract for less than the minimum contract capacity amounts specified above.

CURRENT, PHASE AND VOLTAGE: Alternating current, three-phase, nominally at 4,800, 13,200, 24,000, 41,570 or 120,000 volts at the option of the Company. For definition of customer voltage level, see Schedule Designation B-4.7.

CONDITIONS OF INTERRUPTION: The Company will notify the customer as to the amount of total load on this rider to be curtailed. This notification will be stated as a percentage of total load being supplied on this rider for the hour immediately preceding notification of interruption and will be the same percentage for all customers. Although actual load at time of interruption may vary from contract capacity, the total measured load on this rider shall be subject to curtailment by the Company.

The customer shall be provided, whenever possible, notice in advance (generally 1 hour) of probable interruption and the estimated duration of the interruption. The Company reserves the right to provide less than 1 hour's notice but not less than 10 minutes, if in the Company's sole determination such interruption is either desirable or necessary. Interruptions will be those necessary to maintain system integrity. Interruptions will be in accordance with procedures set forth in the Emergency Electrical Procedures Rule B-3.7.

If the customer fails to curtail load as requested, the Company reserves the right to interrupt the customer's total separately metered load on this rider, or total plant if not separately metered, and the customer will be billed at the rate of \$50 per kW per instance applied to contract capacity.

In addition, the interruptible contract capacity of a customer who does not interrupt shall be immediately reduced by the amount by which the customer failed to interrupt, unless the customer demonstrates that failure to interrupt was beyond its control.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the customers' maximum interruptible requirements, but not less than the minimum contract capacity amounts specified above. Demand/Energy in excess of the contracted load level will be billed under the applicable Primary Supply Rate. The contract capacity shall not be decreased during the term of the contract and subsequent renewal periods as long as service is required unless there is a specific reduction in connected load. Capacity disconnected from service under this rider shall not be subsequently served under any other tariff during the term of this contract and subsequent renewal periods.

(Continued From Sheet No. R10)

Standard Contract Rider No. 10 (Continued)

Interruptible Supply Rider

RATE PER MONTH:

Service Charge: \$275.00 per customer per month.

Demand Charges:

\$3.75 per kW of maximum demand for service at primary voltage level.

\$2.65 per kW of maximum demand for service at subtransmission voltage level.

\$1.80 per kW of maximum demand for service at transmission voltage level.

Energy Charges:

Non-power supply cost charge of 1.026¢ per kWh for all kWh plus,

An hourly power supply cost charge applied to all kWh plus,

A monthly capacity charge in \$ per customer plus,

A voltage level service adder. The total hourly power supply cost charges for the billing month will be multiplied by the following amounts:

- 8% for service at primary voltage
- 3% for service at subtransmission voltage
- 1% for service at transmission voltage

HOURLY POWER SUPPLY COST CHARGE: The hourly power supply cost charge shall be based on the average cost of the resources required to serve the hourly loads under this rider. Customers will be provided with an hourly estimate of the power supply cost, but at the conclusion of each billing cycle the Company will determine the hourly allocation of resources actually serving the hourly loads under this rider, and will determine the hourly power supply cost charge as follows:

- For R10 energy supplied by Company generation, the hourly power supply cost (\$/MWh) shall be based on the monthly cost of fuel by fuel type for the generating unit(s) identified as serving this load. The monthly cost of fuel shall include only those fuel costs incurred for electric generation and will be determined as follows:
 1. Each generating plant's monthly booked fuel cost (\$) by fuel type shall be divided by each plant's consumption (MMBTU) by fuel type.
 2. This amount (\$/MMBTU) by fuel type will be multiplied by each unit's consumption (MMBTU) by fuel type to obtain the fuel cost (\$) by fuel type for each generating unit.
 3. The fuel cost (\$) by fuel type shall be summed for the unit and divided by the unit's total MMBTU consumption.
 4. This amount (\$/MMBTU) will be multiplied by the unit's total consumption (MMBTU) for electric generation resulting in the unit's monthly cost of fuel (\$) for electric generation.

Effective for bills rendered on and
after March 26, 2001 under
authority of order of the Michigan
Public Service Commission in
Case No. U-12478 dated
November 2, 2000.

STANDARD CONTRACT RIDER No. 10
INTERRUPTIBLE SUPPLY RIDER--CONTINUED

RATE PER MONTH:

Service Charge: \$275.00 per customer per month.

Demand Charges:

- \$3.75 per kW of maximum demand for service at primary voltage level.
- \$2.65 per kW of maximum demand for service at subtransmission voltage level.
- \$1.80 per kW of maximum demand for service at transmission voltage level.

Energy Charges:

Non-power supply cost charge of 1.85¢ per kWh for all kWh plus,

An hourly power supply cost charge applied to all kWh plus,

A monthly capacity charge in \$ per customer plus,

A voltage level service adder. The total hourly power supply cost charges for the billing month will be multiplied by the following amounts:

- 8% for service at primary voltage
- 3% for service at subtransmission voltage
- 1% for service at transmission voltage

HOURLY POWER SUPPLY COST CHARGE: The hourly power supply cost charge shall be based on the average cost of the resources required to serve the hourly loads under this rider. Customers will be provided with an hourly estimate of the power supply cost, but at the conclusion of each billing cycle the Company will determine the hourly allocation of resources actually serving the hourly loads under this rider, and will determine the hourly power supply cost charge as follows:

- For R10 energy supplied by Company generation, the hourly power supply cost (\$/MWh) shall be based on the monthly cost of fuel by fuel type for the generating unit(s) identified as serving this load. The monthly cost of fuel shall include only those fuel costs incurred for electric generation and will be determined as follows:
 1. Each generating plant's monthly booked fuel cost (\$) by fuel type shall be divided by each plant's consumption (MMBTU) by fuel type.
 2. This amount (\$/MMBTU) by fuel type will be multiplied by each unit's consumption (MMBTU) by fuel type to obtain the fuel cost (\$) by fuel type for each generating unit.
 3. The fuel cost (\$) by fuel type shall be summed for the unit and divided by the unit's total MMBTU consumption.
 4. This amount (\$/MMBTU) will be multiplied by the unit's total consumption (MMBTU) for electric generation resulting in the unit's monthly cost of fuel (\$) for electric generation.

Detroit, Michigan 48226

Effective for service rendered on
and after January 1, 1993, under
authority of order of the Michigan
Public Service Commission dated
May 21, 1992 in Case U-10090

(Continued From Sheet No. R10a)

Standard Contract Rider No. 10 (Continued)

Interruptible Supply Rider

5. The unit's monthly cost of fuel (\$) for electric generation will be divided by the unit's net generation (MWh) to determine the hourly power supply cost (\$/MWh) for the month.

- For R10 energy supplied by purchased power, the hourly power supply cost charge will be calculated by dividing the total cost for the resource (excluding any costs allocated to the R10 customer via the monthly capacity charge) by the total energy for the resource.

MONTHLY CAPACITY CHARGE: The monthly capacity charge for fixed purchased power costs associated with power purchased for capacity deficiency reasons will be determined as follows:

- When power is purchased to meet a capacity deficiency and that purchase is identified as serving R10 load, the fixed purchase costs associated with the power transaction shall be borne by R10 customers. The amount of the fixed purchased costs, including any minimum purchase costs, charged to each R10 customer shall be determined by multiplying the fixed purchase costs, expressed in \$/MW, by the greater of either the scheduled R10 load (MW) or the actual load (MW) for each customer for the period during which the power was purchased to serve R10 load.

SUBSTATION CREDIT: Available to customers where service at subtransmission voltage level or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of \$.30 per kW of maximum demand shall be applied to the maximum demand charge. A credit of .040¢ per kWh shall be applied to the energy charge where the service is metered on the primary side of the transformer.

POWER SUPPLY COST RECOVERY: Service provided under this rider is not subject to the provisions of Schedule Designation B-4.6. However, for purposes of power supply cost reconciliation, the Company's total power supply costs and kWh sales will be reduced by the hourly power supply cost charges, the monthly capacity charges, the voltage level service adder, and the kWh sales associated with service under this rider.

SURCHARGES AND CREDITS: As approved by the Commission. See schedule designation B-4.9.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: The Service Charge plus the Maximum Demand Charge, plus all applicable energy charges.

MAXIMUM DEMAND: The maximum demand shall be the highest 30-minute demand created during the previous 12 billing months, including the current month but not less than 50% of the contract capacity. This clause is applicable to each voltage level served.

POWER FACTOR CLAUSE: Shall be the Power Factor Clause as defined in the Primary Supply Rate (D6).

SPECIAL TERMS AND CONDITIONS: Customer-owned equipment must be operated so the voltage fluctuations on the primary distribution system of the Company shall not exceed permissible limits.

The customer will own and maintain the necessary equipment to separate the interruptible load from the firm power load. This equipment must meet the Company standards. The customer must also provide space for the separate metering of the interruptible load.

The interruptible load shall not be served from firm power circuits at any time. Violations of this provision will result in a charge of \$50 per kilowatt per month applied to the interruptible load determined to have been served from firm power circuits.

EFFECTIVE FOR SERVICE RENDERED ON
AND AFTER NOVEMBER 24, 2004
UNDER AUTHORITY OF ORDER OF THE
MICHIGAN PUBLIC SERVICE COMMISSION
DATED NOVEMBER 23, 2004
IN CASE NO. U-13808

STANDARD CONTRACT RIDER No. 10
INTERRUPTIBLE SUPPLY RIDER--CONTINUED

5. The unit's monthly cost of fuel (\$) for electric generation will be divided by the unit's net generation (MWh) to determine the hourly power supply cost (\$/MWh) for the month.
- For R10 energy supplied by purchased power, the hourly power supply cost charge will be calculated by dividing the total cost for the resource (excluding any costs allocated to the R10 customer via the monthly capacity charge) by the total energy for the resource.

MONTHLY CAPACITY CHARGE: The monthly capacity charge for fixed purchased power costs associated with power purchased for capacity deficiency reasons will be determined as follows:

- When power is purchased to meet a capacity deficiency and that purchase is identified as serving R10 load, the fixed purchase costs associated with the power transaction shall be borne by R10 customers. The amount of the fixed purchased costs, including any minimum purchase costs, charged to each R10 customer shall be determined by multiplying the fixed purchase costs, expressed in \$/MW, by the greater of either the scheduled R10 load (MW) or the actual load (MW) for each customer for the period during which the power was purchased to serve R10 load.

OPTIONAL MARKET BASED PRICING PROVISION: This option is available to Rider 10 customers desiring alternative power supply cost pricing based on market based power supply indices. Charges under this provision shall replace the charges provided for under the "Hourly Power Supply Cost Charge" provision of Rider 10. Customers electing this optional service shall do so no later than 30 days following Michigan Public Service Commission approval of this provision. Customers must transfer 100% of their R10 requirements to this provision and must remain on this provision through December 31, 2003. The customer is also required to purchase its total Rider 10 interruptible service requirements from Detroit Edison through December 31, 2003. This option expires on December 31, 2003. The charges are as follows:

On-Peak Energy Charge:

- (CDI plus Load Following plus Losses) plus 0.45¢/kWh applied to all primary on-peak kWh.
- (CDI plus Load Following plus Losses) plus 0.45¢/kWh applied to all subtransmission on-peak kWh.
- (CDI plus Load Following plus Losses) plus 0.45¢/kWh applied to all transmission on-peak kWh.

Off-Peak Energy Charge:

- (NECAR plus Load Following plus Losses) applied to all primary off-peak kWh.
- (NECAR plus Load Following plus Losses) applied to all subtransmission off-peak kWh.
- (NECAR plus Load Following plus Losses) applied to all transmission off-peak kWh.

For the above charges:

- CDI = the Cinergy Daily Index price as reported in Megawatt Daily or successor publication.
- NECAR = the Northern ECAR price as reported in Megawatt Daily or successor publication.
- 0.45¢/kWh = American Electric Power (AEP) on-peak transmission to Michigan.
- Load Following = 10%
- Losses = 2% for energy delivery to Michigan, plus losses for delivery to the customer of 8% for primary, 3% for subtransmission, and 1% for transmission.
- On-peak hours are the hours between 0700 and 2300 each day, Monday through Friday, legal holidays excluded.

Effective for service rendered on and after January 1, 1993, under authority of order of the Michigan Public Service Commission dated May 21, 1992 in Case U-10090

(Continued From Sheet No. R10b)

Standard Contract Rider No. 10 (Continued)

Interruptible Supply Rider

SPECIAL TERMS AND CONDITIONS (Continued): In order to implement Company initiated interruptions, the Company shall install and maintain, at the customer's expense, any equipment necessary to permit the Company to control interruptions of the customer's load and any facilities necessary to transmit and receive information regarding hourly energy costs and real-time monitoring of the customer's load. The Company will conduct at least once a year a physical test of this equipment to verify that it is functioning properly. The customer is also required to provide the Company with an hourly schedule of expected customer loads. These hourly schedules will be delivered to the Company weekly and no later than Thursday for estimates for the following week.

Electric energy from any source, other than the Company's, will be used to first reduce sales on this rider. Standby service will not be billed at this rider, but must be taken under Riders No.3, No.5, or No.6.

CONTRACT TERM: The contract term is 8 years, extending thereafter from month-to-month until terminated by 5 years written notice by either party, which may be given at any time after the third year of the contract. Once notice of termination is given by the customer, such notice cannot be withdrawn without full permission of the Company. For the first year of service under this rider, the customer shall have the right to terminate the contract and return to service under the Company's rates for firm service by paying an amount equal to the D6 on-peak billing demand charge times the contract capacity for the number of months served under this rider.

BASE RATE REDUCTION: A credit of 3.227% applied to the service charge, maximum demand charge, non-power supply cost charge, and substation credits (if applicable) plus an energy credit of:

0.06435¢ per kWh for all Primary Voltage kWh
0.06137¢ per kWh for all Subtransmission Voltage kWh
0.06018¢ per kWh for all Transmission Voltage kWh

POWER SUPPLY COST RECOVERY: Service provided under this rider is not subject to the provisions of Schedule Designation B-4.6. However, for purposes of power supply cost reconciliation, the Company's total power supply costs and kWh sales will be reduced by the hourly power supply cost charges, the monthly capacity charges, the voltage level service adder, and the kWh sales associated with service under this rider.

SURCHARGES AND CREDITS: As approved by the Commission. See schedule designation B-4.9.

5% SECURITIZATION REDUCTION: A credit of 5% applied to the base bill and surcharges.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: The Service Charge plus the Maximum Demand Charge, plus all applicable energy charges.

MAXIMUM DEMAND: The maximum demand shall be the highest 30-minute demand created during the previous 12 billing months, including the current month but not less than 50% of the contract capacity. This clause is applicable to each voltage level served.

POWER FACTOR CLAUSE: Shall be the Power Factor Clause as defined in the Primary Supply Rate (D6).

SPECIAL TERMS AND CONDITIONS: Customer-owned equipment must be operated so the voltage fluctuations on the primary distribution system of the Company shall not exceed permissible limits.

The customer will own and maintain the necessary equipment to separate the interruptible load from the firm power load. This equipment must meet the Company standards. The customer must also provide space for the separate metering of the interruptible load.

The interruptible load shall not be served from firm power circuits at any time. Violations of this provision will result in a charge of \$50 per kilowatt per month applied to the interruptible load determined to have been served from firm power circuits.

(To add words in the Customer Reliability Option paragraph, and to extend expiration date)

STANDARD CONTRACT RIDER No. 10
INTERRUPTIBLE SUPPLY RIDER--CONTINUED

POWER FACTOR CLAUSE: Shall be the Power Factor Clause as defined in the Primary Supply Rate (D6).

SPECIAL TERMS AND CONDITIONS: Customer-owned equipment must be operated so the voltage fluctuations on the primary distribution system of the Company shall not exceed permissible limits.

The customer will own and maintain the necessary equipment to separate the interruptible load from the firm power load. This equipment must meet the Company standards. The customer must also provide space for the separate metering of the interruptible load.

The interruptible load shall not be served from firm power circuits at any time. Violations of this provision will result in a charge of \$50 per kilowatt per month applied to the interruptible load determined to have been served from firm power circuits.

In order to implement Company initiated interruptions, the Company shall install and maintain, at the customer's expense, any equipment necessary to permit the Company to control interruptions of the customer's load and any facilities necessary to transmit and receive information regarding hourly energy costs and real-time monitoring of the customer's load. The Company will conduct at least once a year a physical test of this equipment to verify that it is functioning properly. The customer is also required to provide the Company with an hourly schedule of expected customer loads. These hourly schedules will be delivered to the Company weekly and no later than Thursday for estimates for the following week.

Electric energy from any source, other than the Company's, will be used to first reduce sales on this rider. Standby service will not be billed at this rider, but must be taken under Riders No.3, No.5, or No.6.

CUSTOMER RELIABILITY OPTION: This option is available to Rider No. 10 customers desiring to arrange for the Company to contract with a third party electricity supplier for back-up power in the event an interruption is requested by the Company. Back-up power shall be from sources under arrangements not otherwise available to the Company to provide service to its firm load customers. This option is available for the period of May 15 - September 15 and this Customer Reliability Option expires on December 31, 2001.

The customer is responsible for all costs associated with contracting for supplemental purchases from a third party supplier and delivery of such power purchases to the Michigan Electric Coordinated Systems (MECS) transmission system. All Rider No. 10 charges shall apply to power delivered under this option except for the hourly power supply cost charge. All power purchases must be scheduled with the Company.

If for any reason such purchases are deemed not to be delivered to the designated MECS point of interconnection the customer shall be subject to interruption. In order to maintain service to its firm load customers, if such service is jeopardized by constraints on the transmission system, customers electing this option will be subject to interruption before firm load customers.

CONTRACT TERM: The contract term is 8 years, extending thereafter from month-to-month until terminated by 5 years written notice by either party, which may be given at any time after the third year of the contract. Once notice of termination is given by the customer, such notice cannot be withdrawn without full permission of the Company. For the first year of service under this rider, the customer shall have the right to terminate the contract and return to service under the Company's rates for firm service by paying an amount equal to the D6 on-peak billing demand charge times the contract capacity for the number of months served under this rider.

**STANDARD CONTRACT RIDER No. 11
PHOTOVOLTAIC SERVICE**

AVAILABILITY OF SERVICE: Available on an optional basis to customers desiring photovoltaic (PV or solar) power service. The total contracted photovoltaic capacity on the tariff is limited to the installed photovoltaic generation capacity. Applicable rates include:

Residential Service Rate	Schedule Designation D1
Residential Time of Day Rate	Schedule Designation D1.2
Residential Senior Citizen Rate	Schedule Designation D1.3
Optional Residential (Time of Day Farm and Space Heating) Rate	Schedule Designation D1.4
Residential Space Heating Rate	Schedule Designation D2
General Service Rate	Schedule Designation D3
Large General Service Rate	Schedule Designation D4
Primary Supply Rate	Schedule Designation D6
Alternative Primary Service Rate	Schedule Designation D6.1
Interruptible Supply Rate	Schedule Designation D8
All-Electric School Building Rate	Schedule Designation D10

CURRENT, PHASE AND VOLTAGE: Same as above rates.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in increments shown below.

Minimum Capacity Increments: D1, D1.2, D1.3, D1.4, D2:	0.1 kW
All others:	0.5 kW

Primary service customers (D6, D6.1, D8, and D10) must contract for a minimum of 1.5 kW.
D8 customers cannot elect photovoltaic capacity exceeding their product protection load.

**STANDARD CONTRACT RIDER No. 11
PHOTOVOLTAIC SERVICE**

AVAILABILITY OF SERVICE: Available on an optional basis to Residential Service Rate (D1, D1.3, D1.4, and D2) and General Service Rate (D3) customers desiring photovoltaic (PV or solar) power service. The total contracted photovoltaic capacity on the tariff is limited to the installed photovoltaic generation capacity.

CURRENT, PHASE AND VOLTAGE: Same as D1, D1.3, D1.4, D2 and D3 rates.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in increments shown below.

Minimum Capacity Increments: Residential: 0.1 kW
Commercial: 0.5 kW

RATE PER MONTH:

Capacity Charge: \$5.90 - \$7.30 per 0.1 kW (see Note 1)

System Use Charge: Residential: 4.0 ¢/kWh
Commercial: 3.0 ¢/kWh

Customer share of PV energy will be based on the ratio of:
(Customer contract capacity / installed photovoltaic generation capacity) x (PV energy output less 4% for losses). All kWh consumed in excess of that produced by the installation will be billed at the normally applicable rate (base rate).

Note 1: The current capacity charge is \$7.30 per 0.1 kW per month. If favorable property tax treatment is afforded the associated photovoltaic equipment in the future, then the capacity charge will be adjusted downward. The minimum charge under any circumstance will be \$5.90 per 0.1 kW per month.

BILLING FREQUENCY: Based on a nominal 30-day month. See Schedule Designation B-4.2(1).

MINIMUM CHARGE: The monthly capacity charge. This minimum charge is in addition to the minimum charge under the base rate.

POWER SUPPLY COST RECOVERY FACTOR: The energy produced by the photovoltaic installation is not subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

ORDER U-12478

REMOVED BY JKB

DATE 3-19-03

Customer share of PV energy will be based on the ratio of:

$$\frac{(\text{Customer contract capacity} / \text{installed photovoltaic generation capacity}) \times (\text{PV energy output less 4\% for losses})}{\text{and D10 customers, all kWh consumed in excess of that produced by the installation will be billed at the normally applicable rate (base rate).}$$

For D4, D6, D6.1, and D8 customers, a billing demand credit of 0.5kW will be applied for each kW of contracted photovoltaic capacity. All kWh consumed in excess of that produced by the installation will be billed at the normally applicable rate (base rate).

Note 1: The current capacity charges are \$6.94 per 0.1 kW per month for residential, and \$7.30 per 0.1kW per month for commercial and industrial. If favorable property tax treatment is afforded the associated photovoltaic equipment in the future, then the capacity charge will be adjusted downward. The minimum charge under any circumstance will be \$5.61 per 0.1 kW per month for residential, and \$5.90 per 0.1kW per month for commercial and industrial.

BILLING FREQUENCY: Based on a nominal 30-day month. See Schedule Designation B-4.2(1).

BASE RATE REDUCTION: Residential: A credit of 3.066% applied to the base bill
Commercial, Industrial: A credit of 3.227% applied to the base bill.

POWER SUPPLY COST RECOVERY FACTOR: The energy produced by the photovoltaic installation is not subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

5% SECURITIZATION REDUCTION: A credit of 5% applied to the base bill and surcharges.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: The monthly capacity charge. This minimum charge is in addition to the minimum charge under the base rate.

CONTRACT TERM: The nominal contract term for D1, D1.2, D1.3, D1.4, and D2 customers is for a period of two years, extending thereafter from month to month. The contract may be terminated by mutual consent or on twelve months written notice by either party, which may be given at any time after the end of the first year.

The nominal contract term for D3, D4, D6, D6.1, D8, and D10 customers is for a period of ten years. The contract may be terminated by mutual consent or on twelve months written notice by either party, which may be given at any time after the end of the first year.

M/158

Issued: March 1, 2002
By: H. L. Dow III
Senior Vice President
Strategic Planning and Development
2000 Second Avenue
Detroit, Michigan 48226

Effective for bills rendered on and after March 1, 2002 under authority of order of the Michigan Public Service Commission in Case No. U-12478 dated February 6, 2002.

(To reflect reduction of energy charges due to implementation of securitization charges.)

STANDARD CONTRACT RIDER No. 11
PHOTOVOLTAIC SERVICE - Continued

RATE PER MONTH:

Capacity Charge: Residential: \$5.61-\$6.94 per 0.1kW (See Note 1)
Commercial, Industrial: \$5.90-\$7.30 per 0.1kW (See Note 1)

System Use Charge: D1, D1.2, D1.3, D1.4, D2: 3.33¢/kWh
D3, D4: 2.53¢/kWh
D10: 1.53¢/kWh
D6, D6.1, D8: Included in Base Rate

Customer share of PV energy will be based on the ratio of:

(Customer contract capacity / installed photovoltaic generation capacity) x
(PV energy output less 4% for losses). For D1, D1.2, D1.3, D1.4, D2, D3,
and D10 customers, all kWh consumed in excess of that produced by the
installation will be billed at the normally applicable rate (base rate).

For D4, D6, D6.1, and D8 customers, a billing demand credit of 0.5kW will be applied for each kW of
contracted photovoltaic capacity. All kWh consumed in excess of that produced by the installation will
be billed at the normally applicable rate (base rate).

Note 1: The current capacity charges are \$6.94 per 0.1 kW per month for residential, and \$7.30 per 0.1kW
per month for commercial and industrial. If favorable property tax treatment is afforded the associated
photovoltaic equipment in the future, then the capacity charge will be adjusted downward. The minimum
charge under any circumstance will be \$5.61 per 0.1 kW per month for residential, and \$5.90 per 0.1kW
per month for commercial and industrial.

BILLING FREQUENCY: Based on a nominal 30-day month. See Schedule Designation B-4.2(1).

BASE RATE REDUCTION: Residential: A credit of 3.066% applied to the base bill
Commercial, Industrial: A credit of 3.227% applied to the base bill.

POWER SUPPLY COST RECOVERY FACTOR: The energy produced by the photovoltaic installation is not
subject to the provisions of Schedule Designation B-4.6.

SURCHARGES AND CREDITS: As approved by the Commission. See Schedule Designation B-4.9.

5% SECURITIZATION REDUCTION: A credit of 5% applied to the base bill and surcharges

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: The monthly capacity charge. This minimum charge is in addition to the minimum
charge under the base rate.

CONTRACT TERM: The nominal contract term for D1, D1.2, D1.3, D1.4, and D2 customers is for a period of
two years, extending thereafter from month to month. The contract may be terminated by mutual consent
or on twelve months written notice by either party, which may be given at any time after the end of the first
year.

The nominal contract term for D3, D4, D6, D6.1, D8, and D10 customers is for a period of ten years. The
contract may be terminated by mutual consent or on twelve months written notice by either party, which
may be given at any time after the end of the first year.

Effective under authority of order
of the Michigan Public Service
Commission dated July 31, 1995
in Case U-10893

STANDARD CONTRACT RIDER No. 12
CAPACITY RELEASE

AVAILABILITY OF SERVICE: *Available to customers desiring a voluntary capacity release payment for loads not less than 1,000 kW at a single location.* The customer must reduce load by at least 50% of the normal load of the facility. *At the option of the Company, the 1,000 kW and 50% minimum loads may be waived when the load is separately metered.* This rider is effective for service rendered on or after May 15, 1998.

TERMS OF SERVICE: Customers will be requested to curtail load with not less than 1-hour notice from the Company. The customer shall be provided, whenever possible, notice in advance of probable reduction request and estimated duration of reduction. Load reduction requests are at the discretion of the Company.

PAYMENT TERMS: The customer will bid a price in ¢/kWh for each load reduction that they include in the program. While there is no specified cap (in ¢/kWh) for the bid, the Company reserves the right to reject bids. The Company will pay the customer for all such load reduced at the bid price. A customer's bid may be revised no more than twice a month. A revised bid must be submitted to the Company prior to 11:00 a.m. on Thursday in order for it to be in effect on the following Monday. The Company will first request customers with the lowest bid price to reduce load, and, if necessary, will subsequently make the request to higher bid prices.

All individual customer information, including bid prices, will be kept confidential.

CALCULATION OF LOAD REDUCTION: Load reduction will be verified by metered quantities whenever possible. Where the amount of load reduction is not directly metered, the Company and the customer will mutually agree on calculation methods. The customer shall agree to provide information in order to make such calculations.

No payment will be made for load reduction required by Emergency Electrical Procedures as defined under Rule B-3.7.

SPECIAL TERMS AND CONDITIONS: Special metering is at the option and expense of the customer. The customer is required to provide the Company with notification methods to be used and provide the Company with current customer personnel responsible for such notification of load reduction requests.

TERM: This rider expires December 31, 2002.

Executive Vice President
and Chief Financial Officer
2000 Second Avenue
Detroit, Michigan 48226

Effective for service rendered on and after **March 15, 2000** under authority of order of the Michigan Public Service Commission dated March 14, 2000 in Case **U-12250**

**STANDARD CONTRACT RIDER No. 12
CAPACITY RELEASE**

AVAILABILITY OF SERVICE: Available to Primary Supply Rate (D6), Alternative Primary Supply Rate (D6.1) and Primary Pumping Rate (E4) customers desiring a voluntary capacity release payment for loads not less than 1,000 kW at a single location. The customer must reduce load by at least 50% of the normal load of the facility. This rider is effective for service rendered on or after May 15, 1998.

TERMS OF SERVICE: Customers will be requested to curtail load with not less than 1-hour notice from the Company. The customer shall be provided, whenever possible, notice in advance of probable reduction request and estimated duration of reduction. Load reduction requests are at the discretion of the Company.

PRICING TERMS: The customer will bid a price in ¢/kWh for each load reduction that they include in the program. While there is no specified cap (in ¢/kWh) for the bid, the Company reserves the right to reject bids. The Company will pay the customer for all such load reduced at the bid price. A customer's bid may be revised no more than twice a month. A revised bid must be submitted to the Company prior to 11:00 a.m. on Thursday in order for it to be in effect on the following Monday. The Company will first request customers with the lowest bid price to reduce load, and, if necessary, will subsequently make the request to higher bid prices. The duration of the request will be for a minimum of 4 hours.

All individual customer information, including bid prices, will be kept confidential.

CALCULATION OF LOAD REDUCTION: Load reduction will be verified by metered quantities whenever possible. Where the amount of load reduction is not directly metered, the Company and the customer will mutually agree on calculation methods. The customer shall agree to provide information in order to make such calculations.

Payments will only be made for load reductions of 1,000 kW or greater.

No payment, beyond the 4-hour minimum, will be made for load reduction required by Emergency Electrical Procedures as defined under Rule B-3.7.

SPECIAL TERMS AND CONDITIONS: Special metering is at the option and expense of the customer. The customer is required to provide the Company with notification methods to be used and provide the Company with current customer personnel responsible for such notification of load reduction requests.

CONTRACT TERM: This rider expires December 31, 1999.

STANDARD CONTRACT RIDER No. 13
DISPERSED GENERATION

AVAILABILITY OF SERVICE: *Available to customers which have on-site generators desiring a voluntary dispersed generation payment for operating their generation at the request of the Company.* The customer must have on-site generation of at least 250 kW capacity at a single location. This rider is effective for service rendered on or after May 15, 1998.

TERMS OF SERVICE: Customers will be requested to operate generation upon notice from the Company. The customer shall be provided, whenever possible, notice in advance of such probable requests and estimated duration of the request. Such requests are at the discretion of the Company.

PAYMENT TERMS: *The Company and the customer will mutually agree on the prices, terms, and conditions for dispersed generation power. Such payment terms will reflect the type of service including, but not limited to energy only, capacity, seasonal, hourly, daily, monthly, etc.*

The amount of generator output will be verified by metered quantities whenever possible. Where the amount of generator output is not directly metered, the Company and the customer will mutually agree on calculation methods. The customer shall agree to provide information in order to make such calculations.

No payment will be made for load reduction required by Emergency Electrical Procedures as defined under Rule B-3.7.

SPECIAL TERMS AND CONDITIONS: Special metering is at the option and expense of the customer. The customer is required to provide the Company with notification methods to be used and provide the Company with current customer personnel responsible for such notification of load transfer requests. Customers desiring to operate generators in parallel with the Company's system must comply with the requirements of the Company's Interconnection Guidelines.

TERM: This rider expires December 31, **2002**.

(To reflect reduction in energy charges due to implementation of securitization charges.)

**INTELLIGENT LINK PROJECT
WHOLE-FACILITY LOAD MANAGEMENT RATE**

AVAILABILITY OF SERVICE: Available on an optional basis to residential and commercial customers participating in the Intelligent Link Project who desire time of day service through one meter to a single facility. Service to appurtenant buildings may be taken on the same meter.

HOURS OF SERVICE: 24 Hours.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase, nominally at 120/240 volts, three-wire. Where available, and the demand justifies, three-phase four-wire, Y connected service may be had at 120Y/208 volts nominally. In certain city districts, alternating current is supplied from a Y connected secondary network from which 120/208 volts, three-wire service may be taken.

CRITICAL PRICE PERIOD: The Company may declare a Critical Price Period (CPP) for reasons of, but not limited to, system integrity, economics and emergency purchases. A Critical Price Signal (CPS) will be issued to the customer as notice of the CPP. A CPP will occur for intervals of no longer than eight hours and for no more than 12 hours in any one day. During a CPP all kWh will be billed at the Critical Price Period rate as stated below.

RATE PER MONTH:

Energy Charge:	Price Period	Winter	Summer
	Low	Up to <u>3.33¢/kWh</u>	Up to <u>4.28¢/kWh</u>
	Medium	Up to <u>9.03¢/kWh</u>	Up to <u>13.78¢/kWh</u>
	High	Up to <u>18.53¢/kWh</u>	Up to <u>23.28¢/kWh</u>
	Critical	Up to <u>47.03¢/kWh</u>	Up to <u>70.78¢/kWh</u>

The winter period shall be defined as energy consumed during the months of November through May and the summer period shall be defined as energy consumed during the months of June through October.

DEFINITION OF BILLING PRICE PERIODS:

Price Period	Percent of Annual Hours
Low	No limit on hours.
Medium	Maximum of 35%
High	Maximum of 25%
Critical	Maximum of 5%

CANCELLED BY ORDER
IN CASE NO. U-11010

SURCHARGES AND CREDITS: Included in the above energy charges. See Schedule Designation B-4.6 (Power Supply Cost Recovery Factor) and Schedule Designation B-4.9 (Surcharges and Credits). Adjustments apply only to actual consumption and not to the minimum charge.

5% SECURITIZATION REDUCTION: A credit of 5% applied to the base bill and surcharges.

LATE PAYMENT CHARGE: See Schedule Designation B-2.10.

MINIMUM CHARGE: \$19.00 per month.

CONTRACT TERM: The customer shall remain on the rate for at least six months terminable on three days notice after the initial six months by either party. Under the Intelligent Link Project, customers will be allowed to switch rates once in any twelve month period. Where special services are required, the term will be specified on the applicable contract rider.
